URL http://www.jstor.org/stable/984803. This paper, which immediately follows Benford's [Ben38] in this journal issue, is reported in [LG78, p. 197] to have been of considerable interest to scientists involved in secret nuclear physics work in World War II. That is how Benford's paper “in a journal of rather limited circulation and not usually read by mathematicians” came to be noticed by physicists.

This is the earliest known publication on the phenomenon known as Zipf’s Law, here applied to publication counts of chemists and physicists. Lotka’s Law (a term possibly first used in [Zip49]) says that the number of authors producing $n$ publications is about $1/n^2$ of the number producing only one. This ‘law’ seems to have been misunderstood and misapplied in other fields; see [Pot81].
