is very well written and put together as if by a magic amalgamation of C. P. Snow and A. Church. Following the publication style on Wittgenstein’s works, there are accurate, facing-page English translations of the original German texts. All type has been reset by computer in a more readable form. Indeed, the sheer joy of  $\text{\TeX}$  blooms forth on every page. Every school library should contain this definitive series of volumes.”

Final output produced on bromide at 1270dpi on a Linotronic 300, via DVIPS 5.47 for some parts, and Arbortext's DVILASER/PS (is that the name?) for others. The L300 is owned and run by the University of London, and they have loaded the CM fonts onto their RIP's font disk, as well as having the Arbortext software running invisibly, so TeX users can actually submit DVI files over the JANET network (or by direct login and Kermit), and get bromides back through the post 24hrs later.

Preface by Mirella Ferrari. The book is a concordance and a collection of indexes done on the Graduale Romanum, the most important source of the Latin liturgy. The

typesetting of the book is completely done with L<sup>A</sup>T<sub>E</sub>X. There are several kinds of indexes, and — due to the variety of such indexes — several kinds of L<sup>A</sup>T<sub>E</sub>X packages were used, including `multicols`, various kinds of lists and a huge use of the `myverb` package (hundreds of pages!), because I wanted to produce the concordance (not the indexes) at fixed space. The editor (JL) remarks: “The printed volume contains lxxv, 616 pp., being the apparatus and indexes to 70 microfiche which reproduce the original documents. It may be of interest to note that the estimate for commercial typesetting (from existing well-marked ASCII files, but involving many complications such as tables) was in excess of \$20,000; the total cost for T<sub>E</sub>X was below \$2,000 (plus of course one editor’s un-

paid time – but for this sort of work, with a very small market, the key is getting it published at all). In addition, there was the great advantage that fine-tuning could take place right up to the last minute, with instant proofs at low cost. I am (as a former commercial printer as well as a printing historian and hobbyist letterpress printer) thoroughly sold on T<sub>E</sub>X, and am using it for three additional books now in progress – for technical bibliography, which can often be as complicated as mathematics, the range of possibilities and flexibility makes it well worth the complexity.”

Set in LaTeX with a customized style named `clutful` as mentioned in the back of the titlepage. Uses the 12pt option with standard Computer Modern type faces. The illustrations are mainly hard copies of computer screens reduced and pasted in place. `\tt` type face is used a lot for reproducing computer programs.
