

hyph-utf8

Mojca Miklavc & Arthur Reutenauer

September 18, 2010

Abstract

The hyph-utf8 package gathers all the existing hyphenation patterns for T_EX, converted to UTF-8. They can be used directly by UTF-8-aware T_EX engines such as LuaT_EX and X_YT_EX, and there is a mechanism to convert the patterns to some 8-bit encoding when used with pdfT_EX or Knuth's T_EX.
