

Abstract

This is a sample document that tests the use of entries in sectioning commands through commands like `\glsfmtshort` and `\glsfmttext`.

Contents

| | | |
|----------|--|----------|
| 1 | SAMPLE Chapter with HTML Abbreviation | 2 |
| 2 | Another SAMPLE Chapter with HTML Abbreviation | 4 |
| | Glossary | 6 |

Chapter 1

Sample Chapter with HTML Abbreviation

First use: [hypertext markup language \(HTML\)](#). Next use: [HTML](#). Note that the [sample](#) entry that occurs at the start of the chapter title appears in lower case in the PDF bookmarks, since the case-changing command can't be used there.

Page break to test header.

Chapter 2

Another Sample Chapter with HTML Abbreviation

The case-changing commands can't be used in PDF bookmarks, so this chapter has used `\texorpdfstring` to provide an alternative for the PDF bookmark. The first chapter ([Sample Chapter with HTML Abbreviation](#)) didn't do this so “[Sample](#)” appeared in lower case in the PDF bookmark.

CHAPTER 2. ANOTHER SAMPLE CHAPTER WITH *HTML* ABBREVIATION5

Page break to test header.

Glossary

HTML hypertext markup language [2](#)

sample an example [2](#), [4](#)
