ISSN 0367-9950. URL http://ieeexplore.ieee.org/stamp/stamp.jsp?tp=&arnumber=5219512. This paper contains on page 121 the first published reference to the term “byte”. An article of the same title appears in “Information Processing. Proceedings of the International Conference on Information Processing, UNESCO, Paris, 15–20 June 1959”, pp. 375–381, 1959. From [Buc62, page 40]: “Byte denotes a group of bits used to encode a character, or the number of bits transmitted in parallel to and from input-output units. A term other than character is used here because a given character may be represented in different applications by more than one code, and different codes may use different numbers of bits (i.e., different byte sizes). In input-output transmission the grouping of bits may be completely arbitrary and have no relation to actual characters. (The term is coined from bite, but respelled to avoid accidental mutation to bit.).”

Göttingen, Germany, 1866. LCCN ???? Posthumous publication of undated, and previously unpublished, work done about October/November 1805, according to historical evidence presented in [HJB85], Gauss’ work predates Fourier’s work of 1807 on the representation of functions as infinite series of trigonometric functions, but due to opposition by Lagrange, Fourier did not publish it until 1822.

‘hardware’ of tubes, transistors, wires, tapes and the like.” [page 2].
