

NAME

bibunlex – reconstruct a BibTeX bibliography data base file from **bibclean** or **biblex** lexical analysis output

SYNOPSIS

bibunlex *<infile >outfile*

or

bibunlex *file1 file2 file3 ... >outfile*

DESCRIPTION

bibunlex takes a lexical token stream from **bibclean**(1) or from **biblex**(1), and reconstructs a BIB_T_E_X bibliography data base file on *stdout*.

The reconstruction is simplistic with regard to obtaining nice spacing, and best results will be obtained if the output is prettyprinted by **bibclean**(1). For example,

bibclean -no-prettyprint *.bib | some-filter | bibunlex | bibclean >new.bib

biblex *.bib | some-filter | bibunlex | bibclean >new.bib

SEE ALSO
