This paper, which immediately follows Benford’s [Ben38] in this journal issue, is reported in [LG78, p. 197] to have been of considerable interest to scientists involved in secret nuclear physics work in World War II. That is how Benford’s paper “in a journal of rather limited circulation and not usually read by mathematicians” came to be noticed by physicists.

URL http://www.jstor.org/stable/24529203. This is the earliest known publication on the phenomenon known as Zipf’s Law, here applied to publication counts of chemists and physicists. Lotka’s Law (a term possibly first used in [Zip49]) says that the number of authors producing \( n \) publications is about \( 1/n^2 \) of the number producing only one. This ‘law’ seems to have been misunderstood and misapplied in other fields; see [Pot81].
