The report was written on 11 June 1945, one month before the first successful test of the atomic bomb at the Trinity site in New Mexico. In it, seven scientists, most of who worked on the Manhattan Project, recommend against the use of the atomic bomb on Japan, and predict a dangerous post-war nuclear arms race. This version was partially declassified in February 1946; eight fragments of text have been removed at the order of government censors. Some of that censored text was later recovered, but at least one sentence may still be missing — see the Web document “The Uncensored Franck Report (1945–1946)”, by Alex Wellerstein, dated 11 January 2012. Reprinted in [FHN'63], and in a longer form, in [Smi65, Appendix] and [Smi70b, pages 371–383].

A sad note on the fate of decorated pilot Major Claude R. Eatherly, who flew over Hiroshima 15 minutes after the atomic bomb was dropped there, and three days later, piloted the plane that dropped an atomic bomb on Nagasaki. Eatherly’s post-war behavior and symptoms described there would likely be recognized now as post-traumatic stress disorder (PTSD).
