...tables and tabular data. The use of technology, particularly in teaching, has become more prevalent. Teachers are increasingly adopting technology to enhance their teaching methods. For instance, the use of computer software like Tableau for data visualization has become a common practice. This software allows teachers to present data in a more interactive and engaging manner, making it easier for students to understand complex concepts. Additionally, the integration of technology in teaching, such as through the use of online platforms, has allowed for remote teaching and learning, providing flexibility and accessibility to a wider range of students. However, the effectiveness of technology-facilitated teaching, referred to as techno-facilitated education, is still a topic of ongoing research.
