[Ano97b] Anonymous. Interview: Why Java won’t repeat the mistakes of Unix. Scott McNealy, chairman and CEO of Sun Microsystems, talks about how Java will change computing and the computer industry. *Byte Magazine*, 22(1):40, January 1997. CODEN BYTEDJ. ISSN 0360-5280. Some McNealy quotes: “And I’m urging every CEO to make sure it [Windows] runs really slowly, so people stop using that stuff. The right way is to ban PowerPoint from your company.” “I banned PowerPoint from my company and we have had the best two quarters we’ve ever had…” “I want to give everybody plastic Mylar sheets and all the pens they need to scribble on them. And I said use what I call the [Sun cofounder] Bill Joy font. You can see where he licked his thumb and erases; it’s so much faster.”

[Balashova:2019:LSR]

[Brec91a] Claudio Beccari. \LaTeX—Guida a un sistema di editoria elettronica. Editore Ulrico Hoepli, Ulrico Hoepli Editore S.p.A., via Hoepli 5, 20121 Milano, Italy, 1991. ISBN 88-203-1931-4. ix + 399 pp. [From the author]: The book is the first and only one in Italian at this moment [18-Nov-1991]. Although it contains an introductory chapter for the beginner, its main purpose is to give the reader advanced information on \LaTeX (and partially on \TeX) in order to prepare sophisticated macros, style files, and to make a clever use of fonts. Here is a reduced table of contents (translated to English): Chapter 1 - Introduction
- Introductory \LaTeX
  - General commands for text mode
    - Mathematical commands
    - Environments
    - Figures and tables
    - Macros
    - Typical documents and style files
  - Fonts
Appendix A - \TeX Users Group
  - Keyboards
  - Font tables
The publisher received camera-ready pages that were prepared by
the author with a 300-dpi laser printer. The page style dimensions
were suitably enlarged while the photo plates were reduced so as
to minimize the granulosity of the signs. In practice the book was
prepared with 12pt option and reduced by the photograpic ratio of
0.8 so that the final real font size is 9.6pt. The whole book was
prepared with the standard Computer Roman fonts on purpose in order
to show the potential user what he can get with a standard \TeX\ kit. The simple pictures were
prepared with the “picture” environment. The cover and the title page
were designed by a graphic expert of the publishing company.

[Bec91b] Claudio Beccari. La tesi di
laurea scientifica—Con note per
la composizione in \TeX—disco
MS-DOS da 5.25in contenente
macroistruzioni di stile. Editore
Ulrico Hoepli, Ulrico Hoepli Edi-
tore S.p.A., via Hoepli 5, 20121
Milano, Italy, 1991. ISBN 88-203-
1932-2. vii + 116 pp. The book was
typeset by the author and printed
with a laser printer having a reso-
lation of 300 dpi. The pages were
then photographically reduced by a
factor of 0.8 to the final size. The
fonts used are those of the stan-
dard \TeX\ set, that is Com-
puter Modern, with a default nor-
mal size of 12pt that the photo-
graphic reduction made equivalent
to approximately 10pt. The book is
a set of instructions for the prepa-
ration of the thesis (Master and
PhD levels) according to the Ital-
ian State Universities regulations;
it deals mostly with literary style
but it also includes extensive tables
of scientific symbols and nomenclature
and many references to Stan-
ards regulations. The final chapter
deal with the typesetting of the thesis
with a \TeX\ style, TOPTESI, whose source is recorded in a floppy
disk that comes with the book.

REFERENCES

USA, 1992. ISBN 0-12-117650-9. xiv + 169 pp. LCCN Z253.4.T47 B67 1992. This book was designed by the author, with some assistance from the production department of Academic Press, Boston. The covers were done by the publisher. It was typeset by the author using Plain TeX plus specially written macros. The code for all macros used for the book are reproduced in it so that the book itself contains all the information—page layout specifications, fonts used, and so on—about its own typesetting. Over half the book consists of TeX input and output shown side-by-side, providing an explicit example of how a part of the book was typeset. The Academic Press logo on page iii, the cataloging-in-publication data on page iv, and the diagrams on page 33 were pasted in place by the production department of Academic Press. The diagrams were drawn using LATEX. Sample printouts of pages were made on various laser printers. When everything seemed satisfactory, the dvi files were copied onto IBM diskettes and were mailed to Academic Press, and from them to the American Mathematical Society. The final copy was produced by the A.M.S. using an APS micro-5 phototypesetter. All fonts used in the book are from the Computer Modern family. Parts of the covers of the book, inside and outside, were done in TeX by the author (the code for this is not included in the book). The outside cover was designed by Camille Pecoul of Academic Press and produced at Allison Associates in Boston. The font used for the title (on the covers) is Meridien. The background pattern was obtained by shooting a handmade marble paper as a black-and-white halftone and then overprinting with the Pantone Matching System (PMS). The placement of material on the cover was done by hand by Ms. Pecoul using a mechanical board. The drop shadow effect was done at Allison Associates.

[357x610]Vyacheslav M. Nesterov, editor. Interval Computations, 1991. ISSN 0135-4868. Box 52, St.Petersburg 195256, Russia, E-mail: nest@nit.spb.su (Internet). A refereed international journal, Interval Computations is the only periodical in the world devoted specifically to various aspects of reliable numerical computations based on the interval approach. It is managed by an international editorial board from Bulgaria, Germany, Japan, Russia, and the United States, and printed in Russia. The journal includes various items in the fields of theoretical research, computer tools, applications, interdisciplinary research and other relevant areas. The IC has been prepared with \TeX{} since 1992. Recently a new style has been designed based on standard \LaTeX{} \texttt{article} style with changes in fonts, headings layout, running heads etc. It uses 10.8pt Baskerville for body text (the unusual font size is selected for better wedding with CM math) and horizontally-squeezed Palatino for headings. For mathematical formulae, standard Computer Modern is preserved. Proofs are made using \emTeX{} DVIHPLJ on a Hewlett-Packard LaserJet IIIp, and final pages are printed at 600dpi. Using \VTeX{} is now under consideration. Papers are accepted in any \TeX{} variety; \LaTeX{} \texttt{article}.sty preferred.
