26 September 2023
Version 3.675

Introduction

This is a bibliography of material on floating-point arithmetic that I came up with while doing research on a floating-point package of my own. I don’t claim it to be anywhere near complete. The material listed is only what I myself possess.

My main interest was in software based, binary floating-point arithmetic on a microprocessor, so you won’t find much material about the hardware used in floating-point arithmetic (e.g. adders, carry propagation schemes, higher radix...
representation for multiplication and division, etc.) in this list. There is also not too much on non-binary floating-point arithmetic.

For most fields covered in this bibliography, the important or historically relevant articles should be included. There is also some material on integer arithmetic in this list as some of the methods used with integer arithmetic contain interesting ideas that may be useful in the realization of a floating-point arithmetic package.

Also, depending on the type of microprocessor used, one may need to implement integer multiplication and division for use in the floating-point package, so articles about this topic are included as well.

As I am German, there is a bit of material in German in this bibliography. However, English translations are provided for all non-English titles.

Thanks to the people who have helped me with previous versions of this document by sending me papers or additional references:

- Steven Sommars (sesv@research.bell-labs.com),
- Jim Kiernan (jmk@teak.cray.com),
- Warren Ferguson (ferguson@seas.smu.edu),
- Nhuan Doduc (ndoduc@framontec.fr),
- K. C. Ng (kwok.ng@eng.sun.com),
- Nelson H. F. Beebe (beebe@math.utah.edu).

Bibliography entries in the Books section are ordered alphabetically by author; ordering is by ascending year in the remaining sections.

**Warning:** it has yet not been possible to bring this citation list up-to-date with the entries in the BibTeX entries.

### Books, hardware oriented

[1671, 266, 1250, 1181, 3054, 3257, 1866, 815, 1130, 971, 1417, 817, 1303, 6863, 6864, 1512]

### Books, software oriented or theory

[1237, 448, 451, 452, 109, 1380, 2339, 881, 1019, 337, 2894, 2380, 2911, 2217, 305, 508, 6719]

### Books, machine specific

[2121, 3159, 3056, 2382, 1717, 1853, 2235, 1885, 2417]
Journal Publications, Conference Papers, Technical Reports, Ph.D. Dissertations, Book Contributions, etc.

1 Choice of base, floating point formats

[479, 724, 726, 705, 702, 866, 1108, 1099, 1986, 2214, 2337, 2490, 2715, 2729]

1.1 Precision and Rounding

[415, 537, 719, 821, 854, 869, 935, 1003, 1011, 1015, 1159, 1260, 1395, 1336, 1494, 1679, 2227, 2402, 2475, 2785, 3101, 3222]

1.2 Determination of parameters of floating point arithmetic

[662, 797, 1589, 2220, 2148]

1.3 IEEE standards for floating point arithmetic

[964, 1162, 1187, 1198, 1161, 1168, 1300, 1287, 1288, 1244, 1264, 1418, 1345, 1369, 1347, 1675, 1774, 1812, 1813, 1810, 2034, 2119, 2285, 2519, 2996]

1.4 Floating point arithmetic, general and implementation issues

[610, 694, 985, 1006, 1052, 1064, 1063, 1200, 1202, 1175, 1238, 1230, 1434, 1451, 1942, 1962, 2164, 2165, 2318, 2392, 2295, 2474, 2716, 2717, 2646, 2714, 2953]

1.5 Floating point packages

[1251, 1650, 1630, 1723, 1681, 1834, 1799, 1835, 1917, 2027, 2049, 2151, 2245, 2246, 2247, 2425, 2426, 1312]

1.6 Floating point units

1.7 Test of floating point routines
[481, 1414, 1676, 1820, 1819, 2053, 2415, 2551, 2618, 2617, 2732, 2711, 2697, 2995]

2 Addition and Subtraction
[360, 1470]

2.1 Floating-point Summation
[310, 330, 347, 346, 549, 615, 653, 805, 1612, 2222, 2298]

2.2 Multiplication
[656, 1210, 1224, 1435, 1499, 1473, 1528, 1555, 1547, 1572, 1545, 1708]

2.3 Division
[196, 224, 210, 307, 333, 420, 988, 1033, 1273, 1363, 1521, 1597, 1576, 1560, 1720, 1840, 1965, 1944, 2333, 2721, 2667, 2909, 2959, 6885, 2891]

3 Elementary functions, general
[369, 382, 565, 626, 593, 1090, 1229, 1580, 1607, 1706, 1669, 1667, 1744, 1790, 6805, 1895, 2001, 2101, 2045, 2224, 6823, 2506, 2543, 2493, 3276, 2495, 2464, 2642, 2793, 2606, 2755, 2756, 2635, 3309, 3277]

3.1 Elementary functions, CORDIC and related algorithms
[178, 179, 234, 249, 358, 504, 531, 635, 627, 643, 708, 829, 1037, 1053, 1257, 1411, 1649, 1847, 1658, 1761, 1913, 2106, 2327, 2257, 2487, 2513, 2661, 2753, 2952, 2947, 3071, 3011, 3057]

3.2 Elementary functions, function approximation
[226, 227, 463, 601, 742, 741, 954, 992, 1128, 1950, 2242, 2134, 2630, 2727, 2728]

3.2.1 Polynomial evaluation
[244, 264, 289, 408, 1030, 1192, 2297]
3.3 Square root, general
[1051, 1152, 1439, 1552, 1603, 2511, 2622]

3.3.1 Square root, bit-oriented, iterative, and table methods of computation
[110, 142, 344, 993, 979, 1117, 1313, 1404, 1366, 1332, 1386, 1493, 1775, 1872, 1784, 1837, 1921, 1902, 1985, 2036, 2086, 2125, 2200, 2336, 2523, 2480, 2654, 2981]

3.3.2 Square root, Newton’s method
[147, 265, 287, 359, 332, 328, 368, 433, 409, 494, 499, 513, 575, 564, 558, 560, 678, 1289, 1279, 1357, 1537, 2280, 2961, 2889]

3.4 Sine and Cosine
[168, 1037, 989, 994, 1141, 1358, 1500, 1617, 1616, 1715, 1803, 1903, 2067, 2178, 2552, 2903, 2900, 2822, 2922, 3017]

3.5 Logarithm
[143, 256, 316, 666, 969, 1080, 1263, 1486, 2054, 2055, 2553, 2679]

3.6 Exponential function
[130, 393, 1148, 1321, 1475, 1698, 1797, 2416, 2554, 2944]

3.7 Arctangent
[132, 148, 194]

3.8 Other transcendental functions
[480, 591, 149, 995, 350, 260, 345, 2047, 1123, 2803, 2997]

4 Binary-decimal conversion
[177, 161, 209, 457, 555, 660, 1131, 1255, 1256, 1365, 1605, 1659, 1952, 1925, 2455, 2547, 2471, 2799]
5  BCD ARITHMETIC

5  BCD arithmetic

[650, 701, 751, 752, 753, 754, 755, 756, 757, 1342, 1450, 1655, 1593, 1987, 2591, 2902]

6  Multiple precision arithmetic

[277, 315, 394, 410, 609, 594, 924, 973, 1068, 1229, 1310, 1390, 1498, 2748, 2976, 3166]

7  Conferences on computer arithmetic

[6745, 6755, 6760, 6769, 6772, 6784, 6802, 6803, 6844, 6874, 6882, 6876, 6908]

8  Additional contributions from Nelson H. F. Beebe

Reciprocals [2217, 2914]. Reciprocals [2577, 5562, 4933, 4028, 1910, 4626, 3618]. Reciprocity [1222]. RECIPROOT [83]. Recoding [5761, 5396, 2327, 4138, 3404, 5420, 563, 5144, 2860, 5728, 3854, 2538, 5268]. Recodings [4982]. Recompiling [6018]. ReConFig [7101]. Reconfigurable [3643, 3902, 1771, 7101, 7109, 3387, 4484, 4507, 5650, 4383, 4388, 5529, 4397, 4696, 5831, 5273, 5768, 5750, 4081, 4236, 4432, 2159, 4320, 5314, 2208, 4532].

Reduction [6083, 5358, 4879, 5164, 5771, 3365, 6629, 5191, 5935, 5611, 5705, 2019, 1897, 921, 1446, 2982, 2274, 4606, 1795, 1185, 1934, 2186, 868, 2497, 3234, 955, 1859, 1867, 1035, 1732, 1888, 2789]. Redundancy [525, 827, 828, 4708, 1769, 6319, 4597, 3427, 5241, 813, 6654, 6070, 4678, 3448, 5453, 4992, 5530, 4393, 3465, 5013, 6213, 4719, 5286, 5461, 5904, 3178, 3357, 4261, 4262, 3196, 4677, 4681, 4682, 5125, 2963, 2789].

Reducible [1799, 1800]. Reduced-Instruction-Set [1799, 1800]. Reduced-precision [6479], Reducibility [1186]. Reducing [4084, 5285, 4096, 4597, 5777, 330, 5626, 3083, 3414, 3590, 3852, 3424, 5731, 355, 225, 4206, 310].

Redundancy [525, 827, 828, 4708, 1769, 6319, 4597, 3427, 5241, 813, 6654, 6070, 4678, 3448, 5453, 4992, 5530, 4393, 3465, 5013, 6213, 4719, 5286, 5461, 5904, 3178, 3357, 4261, 4262, 3196, 4677, 4681, 4682, 5125, 2963, 2789].

Representations [4560, 1986, 206, 828, 5752, 5580, 1569, 2337, 4931, 5623, 5077, 1394, 3072, 672, 4808, 3269, 750, 5104, 2939, 2942, 823, 4553, 5270].

Reproducible [5887, 5888, 5989, 6441, 5997, 6216, 6313, 6108, 5771, 5772, 5774, 5845, 5911, 5938, 6165, 5967, 6429, 5835, 6010, 6228].

Republic [6956, 7103, 7072]. Required [4763, 539, 3223, 5481, 1108, 361, 440, 4660]. Research [7107, 6785, 6150, 2053, 6890, 6753, 6400, 4400, 6742, 1894, 141, 1672, 5700, 3198, 2031, 2035, 5713, 6820, 1646].

Results [4413, 1440, 4235, 3011, 6472, 4942, 4001, 111, 1962, 6067, 685, 1507, 4839, 1890, 1754, 3784, 2137, 3500, 5764, 2299, 3955, 4466, 4624, 5195, 5196, 6634, 3068, 5088, 4180, 1857, 2211, 2910, 5507, 5508, 5514, 2744, 2766, 1887].

RISC [2481, 2486, 2506, 2510, 6306, 6447, 6606, 2599, 4585, 2283, 2151, 6552, 6556, 6557, 2320, 4623, 2482, 2168, 2326, 3038, 3212, 3213, 2041, 2858, 3555, 2345, 2346, 2866, 6636, 3238, 2199, 2893, 2385, 3847, 3091, 2221, 1501, 2550, 6422, 3305, 2568, 6704, 3294].

RLWE-Based [6440]. RN [4873, 4779, 4932, 5073]. RN-coding [4779, 4932]. RN-Codings [5073, 4873]. RNC [7065]. RNC3 [6954]. RNC5 [7021].

RNS [5697, 6059, 6698, 4855, 5139, 4563, 5675, 3647, 3782, 4707, 5353, 5754, 5895, 5995, 6004, 5998, 4582, 3920, 4437, 4591, 6322, 5576, 4737, 3359, 6622, 3803, 6330, 2300, 4107, 5586, 5695, 3947, 4461, 6341, 3688, 3960, 4127, 4471, 6132, 6349, 3210, 3211, 3821, 3052, 2358, 6159, 4338, 4011, 5971, 5238, 2737, 4525, 1492, 4984, 2406, 4039, 5247, 6507, 4203, 1882, 3761, 4689, 5009, 5885].

RNS-Based [5675, 4461, 4107]. RNS-to-weighted [4039]. Road [2616].

REFERENCES

• branch and bound algorithms for global optimization,
• constraint propagation,
• solution sets of linear systems,
• hardware and software systems for interval computations, and
• fuzzy logic.

Actual applications described in the book include:
• economic input-output models,
• quality control in manufacturing design,
• a computer-assisted proof in quantum mechanics,
• medical expert systems,
• and others.

A realistic view of interval computations is taken: the articles indicate when and how overestimation and other challenges can be overcome. An introductory chapter explains the content of the papers in terminology accessible to mathematically literate graduate students. The style of the individual, refereed contributions has been made uniform and understandable, and there is an extensive book-wide index. Audience: Valuable to students and researchers interested in automatic result verification. Detailed information, including contents, contributors, and an order form can be found:

• on Kluwer homepage http://www.wwap.nl, or

The information on the Interval Computations homepage is basically a mirror image of the Kluwer one (the only difference is that the fonts are fancier).

[3565] Jacques-Louis Lions, Mauro Balduccini, Yvan Choquer, Remy Hergott, Bernard Humbert, and Eric Lefort. Ariane 5 Flight 501 failure, report by the Inquiry Board. Technical report, European Space Agency, Paris, France, 1996. URL http://sunnyday.mit.edu/accidents/Ariane5accidentreport.html. From the foreword: “On 4 June 1996, the maiden flight of the Ariane 5 launcher ended in a failure. Only about 40 seconds after initiation of the flight sequence, at an altitude of about 3700 m, the launcher veered off its flight path, broke up and exploded. Engineers from the Ariane 5 project teams of CNES and Industry immediately started to investigate the failure.” From the report: “The internal SRI software exception was caused during execution of a data conversion from 64-bit floating point to 16-bit signed integer value. The floating point number which was converted had a value greater than what could be represented by a 16-bit signed integer. This resulted in an Operand Error. The data conversion instructions (in Ada code) were not protected from causing an Operand Error, although other conversions of comparable variables in the same place in the code were protected.”.

Make sure your math library isn’t the weak link in the chain. *C/C++ Users Journal*, 1(4):49–54, 58–65, December 1996. CODEN CCUJEX. ISSN 1075-2838. Describes a package that extends the Cody-Waite-Plauger work on the ELEFUNT package for the testing of the elementary functions, including the inverse hyperbolic functions, cube root, and Bessel functions of the first and second kinds. The C++ package implements 192-bit extended precision versions of all of the functions, so that accurate results are available for comparison with the normal double-precision results.

From the datasheet (p. 3-5): “The mantissa is expressed as a 24-bit (fractional) value; the exponent is expressed as a two’s complement 7-bit value having the range −64 to +63. The most significant bit is the sign of the mantissa (0 = positive, 1 = negative), for a total of 32 bits. The binary point is assumed to be [to] the left of the most significant mantissa bit (bit 23). All floating-point data values must be normalized. Bit 23 must be equal to 1, except for the value zero, which is represented by all zeros. The range of values that can be represented in this format is ±(2.7⋯ × 10) and zero.”.

Keith Briggs and Yannis Smaragdakis. XR — exact real arithmetic. World-Wide Web document and software package., March 01, 2001. URL http://www.btexact.com/people/briggsk2/XR.html. From the overview: “This is an implementation of exact (or constructive) real arithmetic, as an alternative to multiple-precision floating-point (MPFP). An important distinction is that in MPFP one sets the precision before starting a computation, and then one cannot be sure of the final result. Interval arithmetic is an improvement on this, but still not an ideal solution because if the final interval is larger than desired, there is no simple way to restart the computation at higher precision. By contrast, in XR no precision level is set in advance, and no computation takes place until a final request takes place for some output. Despite this, programming with XR is no different from MPFP, except for the declaration of critical variables as type ‘XR’.

The main aim is to produce a usably efficient implementation, which can be easily interfaced with existing C++ code. This contrasts with previous implementations in functional languages (Haskell, Miranda etc.), which, although theoretically important, seem to be rather too slow for real use. This code is designed as an add-on to Victor Shoup’s arbitrary-precision arithmetic package NTL, and implements a new type XR, to complement NTL’s ZZ and RR integer and real types.

N. Burgess and C. Hinds. Design issues in radix-4 SRT square root & divide unit. In Conference Record of the Thirty-Fifth Asilomar...

[6027] David Hopkins. Will my numbers add up correctly if I round them? *The Mathematical Gazette*, 100(549):396–409, November 2016. CODEN MAGAAS. ISSN 0025-5572 (print), 2056-6328 (electronic). URL https://www.cambridge.org/core/product/88F5753DFE9F0DDDEAD1F2552B0F8B22. The probability that rounding after fixed-point summation of n terms gives the same result as summation of rounded terms is given by $p(n) = (2/\pi) \int_0^\infty (\sin(x)/x)^{n+1} dx$, and that function is always a rational number. Its values are $p(n) = 1, 3/4, 2/3, 115/192, 11/20, 5887/11520, 151/315, 259723/573440, \ldots$ for $n = 1$ to 8.

From the HPC editor: “After this article was published, a number of readers raised concerns about the originality of Jorgensen’s techniques, noting the existence of prior art going back years. Specifically, there is precedent in John Gustafson’s work on unums and interval arithmetic both at Sun and in his 2015 book, The End of Error, which was published 19 months before Jorgensen’s patent application was filed.”.

1996. “Applications of Interval Computations” contains primarily survey articles of actual industrial applications of numerical analysis with automatic result verification and of interval representation of data. Underlying topics include:

- branch and bound algorithms for global optimization,
- constraint propagation,
- solution sets of linear systems,
- hardware and software systems for interval computations, and
- fuzzy logic.

Actual applications described in the book include:

- economic input-output models,
- quality control in manufacturing design,
- a computer-assisted proof in quantum mechanics,
- medical expert systems,
- and others.

A realistic view of interval computations is taken: the articles indicate when and how overestimation and other challenges can be overcome. An introductory chapter explains the content of the papers in terminology accessible to mathematically literate graduate students. The style of the individual, refereed contributions has been made uniform and understandable, and there is an extensive book-wide index. Audience: Valuable to students and researchers interested in automatic result verification. Detailed information, including contents, contributors, and an order form can be found:

- on Kluwer homepage http://www.wkap.nl, or

The information on the Interval Computations homepage is basically a mirror image of the Kluwer one (the only difference is that the fonts are fancier).
