Abstract

This bibliography records books about the Internet and networking. It was started from the contents of Internet RFC 1432 by John S. Quarterman.

Title word cross-reference

[BP93] Howard Besser and Paul Evan Peters. Internet computer network, 1993. Videocassette. Lecture sponsored by the School of Library and Information Studies, University of California, Berkeley. This event took place during a lecture to the Library and Information Title supplied by cataloger. Performers: Howard Besser, presenter; Paul Peters, lecturer. Paul Peters, founder of the Coalition for Networked Information, speaks on the Internet computer network. He surveys the current features of Internet and introduces areas where he feels fundamental shifts in thinking and design are possible by creators.
and users of network information sources.

Kyle Cassidy. SATURN: a Beginner's Guide To Using the Internet. RCNJ Press, ????, 1994. ISBN ?? 110 pp. This is the only Internet book that I know of that is specifically for VAX/VMS users (you poor things.) The manual is somewhat specific
for our VAX 4000, but it can be used by anyone who is netting with VMS. It is also available online for free, FTP-able from: gboro.rowan.edu:/pub/Saturn_Guide.

US$21.95. URL http://www.csi.nb.ca/handbook/handbook.html. Notes from 1st ed: If you live in Canada get this book. It contains sections about getting Internet access in Canada, growth of 'net use there, short basic sections about how to use of some of the most popular Internet tools, a huge directory of Canadian Internet service providers, and even more huge list of gopher servers and campus-wide information systems in Canada and to top it off, lists of Canadian-based Usenet groups, WWW, Archie, IRC servers and online catalogs. Notes from the second edition: really, really get this book!

Aldea Communications. *NetPages*. Aldea Communications, P.O. Box 188125, Carlsbad, CA 92009, USA, 1994. ISBN ????. 200 pp. LCCN ????. Of the various Internet White and Yellow pages books out there, this one looks and acts the most like a ‘real’ telephone book: personal listings of your name and e-mail address are free, advertising space in the yellow pages section is available for a fee, and the book itself it distributed for free. With only a few thousand names in the first edition, this listing is hardly the most complete,
but it only contains information about people who choose to be listed. [Com95d]

REFERENCES

book is a reference work. It details the various computer networks with gateways to the Internet. It is common to cite such works as “indispensable”: in fact, most users, and even site managers, muddle along quite happily without it. Quick reference “electronic” versions exist of very similar documents, which provide the addressing schemes for the more common network and commercial service gateways. Frey and Adams have, however, put together a very complete and interesting reference, and I do suggest it to anyone managing, or using, extensive email correspondence. As a user of electronic mail, or the manager of a small Internet node or UUCP site, it would be hard to say that you “need” this book. If, however, you are at all interested in the topic of e-mail, you will find this fascinating and useful.

Flanagan:1990:GTN
Canada. The author introduces the subject in clear simple language and explains the various issues and terminology. Most terms are clearly explained as they are introduced; no prior understanding of telephone technology is required. The higher-speed technologies and the corresponding global standards are discussed briefly. Reference material is well organized. I recommend this book as an introduction to the subject.

Table of Contents 1 What T1 Does For a Network 2 T-1 Defined Historically 3 Digital Voice 4 T-1 Circuits 5 What Equipment You Will Need At Your Office 6 How To Build a T-1 Network 7 Beyond T-1: Desktop to DS-3 8 Network Management And Control A T-1 Case Examples B Networking Acronyms C Basic Multiplexing D Global Framing Formats Index.

[Fla91] William A. Flanagan. Frames, Packets and Cells in Broadband Networking. Telecom Library Inc., 12 West 21 Street, New York NY 10010, USA, Tel: +1 212 691 8215, +1 800 LIBRARY, FAX: +1 212 691 1191, 1991. ISBN 0-03-664831-7 (??checksum error??) xi + 269 pp. The author takes on the task of teaching the current state of the new data communication technologies, and does a generally excellent job of it. Chapter 1 introduces the basic concepts of packet networking, explaining that technology in detail and drawing contrasts to the T-1 TDM technology explained in The Guide to T-1 Networking by the same author. ASCII and X.25 are referred to in this chapter, with only the briefest description, so the reader should have some rudimentary knowledge of data communication. However the basic differences between packet switching and circuit switching, and between connection-oriented and connectionless transmission, are clearly explained so the reader can skip over confusing terminology without loss. Chapter 2 does an excellent job of explaining the basic concepts underlying the various types of packet, frame and cell technologies, the relative advantages and disadvantages of each, layered protocols, the OSI reference model and says a few words about the functions of SNA, the Internet protocols, the IEEE LAN standards and Signaling System 7. Chapter 3 uses T-1 as an example to explain the SONET/STS and SDH framing technology. The reader should approach this chapter with a good understanding of T-1 synchronization. HDLC is also de-
scribed briefly in this chapter. Chapter 4 explains frame
relay, including the Local
Management Interface, and
again makes a comparison
to X.25 (which is never de-
scribed in detail). This is fol-
lowed by an detailed expla-
nation of the basics of FDDI
(but SMT isn’t covered).

The MAN standards DQDB,
IEEE 802.6 and SMDS, which
are all closely related, are
explained as a unit. ATM
is described, with its rela-
tionship (or lack thereof) to
SONET. The StrataCom pro-
prietary FastPacket protocol
is mentioned briefly, followed
by some general design prin-
ciples for light-weight proto-
cols, with brief descriptions
of XTP and HSTP. If you have
the necessary background to
read it, as explained above,
I can recommend this book
as an introduction to the new
networking technologies that
it covers. Table of Contents

This book is an index of what’s available on the Internet’s newsgroups. It doesn’t delve into any other Internet services. A more appropriate title for this book would be “What’s on Usenet”, because that’s just what it is about. the book is arranged by subject matter and reviews about 1,600 of the most popular, worldwide newsgroups, giving honest opinions about what’s on each, what’s good and bad about them, and how popular each one is.

Ad says: Includes all of the software and instructions both Mac and IBM PC users need to logon to the Internet using a SLIP or PPP connection. This is the first book/disk kit offering all of the software (e-mail, ftp, gopher, telnet, newsreader) needed to access the Net plus a Web browser.

[Godin:1994:IWP] Seth Godin and James S. McBride. *1994 Internet White Pages*. IDG Books, San Mateo, CA, USA, 1994. ISBN 1-56884-300-3. LCCN CT120 .G65 1994. US$29.95. A thick book listing about 100000 e-mail addresses. (Although that may seem like a lot, it’s not very comprehensive.) Addresses are listed by last name and are also indexed by Internet domain name. This book may be useful for finding associates’ e-mail addresses, but is probably no more useful than using one of the many net-based e-mail-address search utilities. The book is unevenly edited (I’m in there three times!) and was woefully out of date before the ink was dry.

[Hahn:1994:ICR] Harley Hahn and Rick Stout. The Internet Complete Reference. Osborne/McGraw-Hill, Berkeley, CA, USA, 1994. ISBN 0-07-881980-6. xxvi + 818 pp. LCCN TK5105.875.157 H3 1994. US$29.95. Highly recommended. This is by far the most complete, illuminating, useful, exciting, readable :- ) book on the Internet. Covering mail, telnet, finger, usenet, ftp, talk, IRC, gopher, Wais, WWW, etc., ... And there is also a Catalog of Internet Resources (over 140 pages) ...

[Hahn:1994:IYP] Harley Hahn and Rick Stout. The Internet Yellow Pages. Osborne/McGraw-Hill, Berkeley, CA, USA, 1994. ISBN 0-07-882023-5. xlv + 447 pp. LCCN TK 5105.875 I57 H3 1994. US$27.95. A catalog of hundreds of Internet resources in phone-book yellow-page format ... The Internet Yellow Pages strives to be an unmatched subject-oriented index to the Internet’s resources, a lofty goal given the number of competing indexes available. Hahn and Stout do it right — this book is a re-
source that long-time Internet addicts and new users will enjoy equally well. Organization is intuitive and consistent. Although it does not point you to as many online resources as some other directories, the ones it points to tend to be high-quality and truly interesting sites to visit. Well-researched and well-indexed.

Lisabeth King, Diane Kovacs, and Ann Okerson. Directory of Electronic Journals, Newsletters and Academic Discussion Lists. Association of Research Libraries, Washington, DC 20036, USA, fourth edition, May 1994. ISBN none listed. v + 575 pp. LCCN Z 6951 D625 1994. US$54 (US$36 to members of the Association of Research Libraries). This directory is broken into two main sections: a catalog of 1,800 academic discussion lists and interest groups, and listings of 440 electronic journals, newsletters and digests — along with notes on how to access each publication. Scholarly lists are grouped by broad subject areas and journals and newsletters are listed in alphabetical order. Also includes five articles and bibliographies on electronic publishing.

[LR93b] Tracy LaQuey and Jeanne C.

[LR93c] Tracy L. LaQuey and Jeanne C. Ryer. *The Internet Companion: a Beginner's Guide to Global Networking.* Addison-Wesley, Reading, MA, USA, October 1993. ISBN 0-201-62224-6. x + 196 pp. LCCN TK5105.875.I57 L37 1993. US$10.95. This is the least expensive introductory guide for new users of the Internet, and perhaps the only one aimed at the general public. It is also being made available online by anonymous FTP from world.std.com, two chapters a month.

[LR93e] Daniel C. Lynch and Marshall T. Rose, editors. *Internet system handbook.* Addison-Wesley, Reading, MA, USA, 1993. ISBN 0-201-56741-5. xxxii + 790 pp. LCCN TK5105.875.I57158 1993. US$40. Reprinted with corrections, January 1993. A description of the process that produces Internet Standards, and some other user level material in addition to protocol material. Essays by people involved with the Internet. Strong on protocols, weak on direction. The book is divided into four parts. The first section deals with an historical and organizational background to the Internet. The second section, written by the people who built the Internet, deals with technical aspects of the major protocols and applications of the Internet. Part three, “Infrastructure,” covers issues not centrally relevant to the operation of the Internet, but supporting its use: network performance and management, backbone and node tools, directory services and operational security. The bibliographic information contained in the book overall might be worth the price alone. Quarterman’s contribution is carefully and fully researched and well organized. It includes not only texts, but periodicals and online sources as well.

Malamud:1990:ANN

Carl Malamud. Analyzing Novell Networks. Van Nostrand Reinhold, New York, NY, USA, 1990. ISBN 0-442-00364-1. xv + 343 pp. LCCN TK5105.7 .M35 1990. US$37.95. Chapter 1 quickly reviews the ISO seven-layer model, explains the overall Novell architecture, and introduces the Network General Sniffer network analysis tool. Chapters 2 and 3 explain the Ethernet, Token Ring and ARCNET physical media. Chapter 4 discusses the IPX, SPX and network maintenance protocols; the author unfortunately does not explain why you DON’T want to use Novell’s default Ethernet encapsulation. He also notes that IPX checksumming is disabled on the example he shows, but doesn’t mention that this is usual Novell practice, or explain the implications. This chapter was written before packets greater than 512 bytes and block mode were implemented. Chapter 5 describes the NetWare operating system; the Bindery; communications utilities; file attributes, access rights, locking and synchronization; print services; job servers; and accounting. Chapter 6 describes the Message Handling Service (MHS) and some gateways between...
it and other type of messaging system. Chapter 7 briefly describes data organization, Btrieve, XQL and NetWare SQL. Chapter 8 describes the Netwise RPC product and its relationship to some other forms of RPC from other vendors. Chapter 9 describes the AT&T STREAMS protocol mechanism and its Novell implementation. Chapter 10 briefly describes the NetWare support for AppleTalk. Chapter 11 describes NetWare for VMS, Portable NetWare (which supersedes NetWare for VMS), and how Novell and DECnet networks can be gatewayed to each other. Chapter 12 briefly describes Novell support for WANS. Chapter 13 discusses gateways between Novell and TCP/IP, SNA (described as “not quite as nonproprietary as TCP/IP” in what is surely the understatement of the year!) NetBIOS and OSI. Much of the discussion is fairly superficial. There is, however, a good bibliography which provides references to more detailed documents. The glossary and index look serviceable. All chapters are illustrated with reproductions of Sniffer displays. Table of Contents: 1 Analyzing Networks 2 Data Links and LLC 3 Token Ring and ARC-NET 4 IPX and SPX 5 NetWare Core Protocols 6 Message Handling Service 7 Data Access 8 Remote Procedure Calls 9 STREAMS and Protocol Stacks 10 AppleTalk 11 DECnet and Portable NetWare 12 X.25 and Wide Area Networks 13 Gateways to Other Networks.

Kelly Maloni. *netchat*. Random House, New York, NY, USA, 1994. ISBN 0-679-75814-3. 281 pp. US$19.00, CDN$25.00. Focuses on in- teracting with others through newsgroups mailing lists, IRC chat groups, forums and support groups — in a word, contact. Coverage is not limited to the Internet, but also the major on-line services such as

[Neu94] Gerald Neufeld. Driving the Infohighway — A Guide for VAX/VMS Users. New Fields Publishing, Brandon, Manitoba, Canada, 1994. ISBN 0-920436-54-4. vi + 286 pp. US$18.95, CDN$24.95. The book is for users who will be accessing the Internet via a VAX/VMS host. It is designed for a reader who has some familiarity with personal computers but who has had little or no experience in using the VAX. It assumes that the user will be accessing the VAX using a VT-100 or better terminal or terminal emulation program. It explains how to access the VAX using a PC on the campus-wide Ethernet LAN or by modem. The book can be used as a tutorial for beginners. The novice user will find the step by step instructions, practical examples, and glossary very helpful. However, the book can also be used as a valuable resource for the more experienced user.

Mike was the Multics system-programmer at Project Mac and is personally responsible for putting two systems on the ARPAnet back when that meant hacking the OS designed and implemented a number of protocols including being working-group chair, and has been a commentator on Internet RFCs since the beginning. (He was also Dennis Ritchie’s officemate before Bell Labs pulled out of Multics and Dennis had to invent UNIX, and has a personal exemption from Dijkstra to use a GOTO when, in his professional opinion as a protocol implementor, it is necessary.) This is a book on style in protocol design and the great Bromdingian TCP vs. ISO debates. It’s a nice piece of history and explains where TCP, TELNET, FTP came from.

[She94] Virginia Shea. *Netiquette*. Albion Books, San Francisco, CA, USA, 1994. ISBN 0-9637025-1-3. 154 pp. A unique book on network etiquette (the *dos* and *DON'Ts* of online communications).... With lots of valuable tips for beginners .... This slim book does an excellent job of helping those new to Cyberspace learn the basic tenants of network etiquette, or “netiquette”. It’s easy to read and loaded with interesting real-life examples. Chapters cover netiquette of e-mail and of discussion groups as well as providing excellent netiquette guidelines for business, home and school use. Particularly useful sections cover Electronic Style (looking good online, tone of voice and signature files) and the “core rules” of the online world. One chapter covers copyright issues and another the etiquette of e-mail privacy. There’s even a tiny chapter on “Love and Sex in Cyberspace”. This book should be required reading for anyone collecting their Internet Learner’s Permit. (You can retrieve a brief excerpt from Netiquette: “The Core Rules of Netiquette” by sending e-mail to netiquette-request@albion.com with the words “archive send core” in the subject line.).

Martha Stone-Martin and Laura Breeden. 51 Reasons: How We Use the Internet and What it Says About the Information Superhighway. FAR-NET, Lexington, MA, USA, 1994. ISBN None. 124 pp. US$19.95. This is a unique book exploring how people and organizations in all 50 United States (plus the capitol) are using the Internet as the first stepping stone toward the Clinton administration’s “information superhighway”. Written as an oral narrative from the mouths of the people making these projects work, the book covers uses of the Internet in libraries, K-12 education, agriculture, economic development, government, health care and higher education. Although brief, 51 Reasons gives novel ideas for the use of the Internet and provides contact information for each of the individuals/projects mentioned.

You can get the text of the book online via gopher (gopher.cni.org:70/11/cniftp/miscdocs/farnet) and FTP (ftp.cni.org:/CNI/documents/farnet/stories index).

Brian J. Thomas. The Internet for scientists and engineers: online tools and resources. SPIE Optical Engineering Press, Bellingham, WA, USA, January 1995. ISBN 0-7803-1162-0, 0-8194-1806-4. xix + 450 pp. LCCN TK5105.875.I57 T48 1995. US$30. From the author’s preface: “This book was written to serve three basic purposes: first, to introduce readers to the process of ‘getting online’; second, to provide a basic tutorial to primary Internet software ‘tools’; and last, to point to a variety of resources compiled specifically for the professional scientist or engineer.” Includes examples for Unix, Windows, and Macintosh computers. Includes excellent indices of online resources in: aerospace, agriculture, anthropology, archaeology, artificial intelligence, astronomy, biology, chemistry, computer science, electronics and electrical engineering, energy, engineering, geology, imaging, linguistics, mathematics, medicine, meteorology, oceanography, physics, security, statistics, and virtual reality.

Slade writes: I find it very difficult to define who or what this book is for, but I would recommend it primarily to managers in charge of large networks and possibly Internetworks needing to evaluate email systems with extended functionality. The title would suggest this is a discussion of the basics of email. That is true only in the most simplistic and superficial way.
