Gerard of IBM United Kingdom Limited, who was then unaware of the computation described above, computed π to 20,000 D on the 7090 in the London Data Centre on July 31, 1961. His program used Machin’s formula, (1) \[\pi = 16 \arctan(1/5) - 4 \arctan(1/239)\], and required 39 minutes running time. His result agrees with ours to that number of decimals.”.
