[SW62] Daniel Shanks and John W. Wrench, Jr. Calculation of π to 100,000 decimals. *Mathematics of Computation*, 16(77):76–99, January 1962. CODEN MCMPAF. ISSN 0025-5718 (print), 1088-6842 (electronic). URL http://www.jstor.org/stable/2003813. A note added in proof says: “J. M. Gerard of IBM United Kingdom Limited, who was then unaware of the computation described above, computed π to 20,000 D on the 7090 in the London Data Centre on July 31, 1961. His program used Machin’s formula, (1) \[ \pi = 16 \arctan(1/5) - 4 \arctan(1/239) \], and required 39 minutes running time. His result agrees with ours to that number of decimals.”.
