[AW97] Victor Adamchik and Stan Wagon. A simple formula for \pi. American Mathematical Monthly, 104(9):852–855, November 1997. CODEN AM-MYAE. ISSN 0002-9890 (print), 1930-0972 (electronic). The authors employ Mathematica to extend earlier work of Bailey, Borwein, and Plouffe, [BBP97], done in 1995, but only just published, that discovered an amazing formula for \pi as is a power series in $16^{-k}$, enabling any base-16 digit of \pi to be computed without knowledge of any prior digits. In this paper, Mathematica is used to find several simpler formulas having powers of $4^{-k}$. They also note that it has been proven that their methods cannot be used to exhibit similar formulas in powers of $10^{-k}$.
