The probability that rounding after fixed-point summation of $n$ terms gives the same result as summation of rounded terms is given by $p(n) = (2/\pi) \int_0^{\infty} (\sin(x)/x)^{n+1} dx$, and that function is always a rational number. Its values are $p(n) = 1, 3/4, 2/3, 115/192, 11/20, 5887/11520, 151/315, 259723/573440, \ldots$ for $n = 1$ to 8.
