[Harr77b] Steven J. Harrington. A symbolic limit evaluation program in REDUCE. A program for the automatic evaluation of algebraic limits, implemented in MODE-REDUCE, is described. The program incorporates many of the techniques previously employed, including the top-down recursive evaluation, power series expansion, and L'Hopital's rule. It also introduces the concept of a special algebraic form for limits., 1977.

ISSN 0001-7701 (print), 1572-9532 (electronic). A package of programs for writing and checking the solutions to the equations for various types of collineations (symmetries of the metric, Christoffel, Riemann and Ricci tensors) is presented. Some examples of previously found collineations that have been checked are given, and new results reported.
