

# The packages **svg** and **svg-extract**

Philip Ilten (2012–2016)

Falk Hanisch (2017–)

<https://github.com/mrpiggi/svg>

[hanisch.latex@outlook.com](mailto:hanisch.latex@outlook.com)

v2.02 (2018/09/08)

The **svg** package is intended for the automated integration of SVG graphics into  $\LaTeX$  documents. Therefor the capabilities provided by **Inkscape**—or more precisely its command line tool—are used to export the text within a SVG graphic to a separate file, which is then rendered by  $\LaTeX$ . The two commands `\includesvg` and `\includeinkscape` are provided as central user-interface, which are very similar to the `\includegraphics` command of the **graphicx** package.

In addition, the package **svg-extract** allows the extraction of these graphics into independent files in different graphic formats, exactly as it is rendered within the document. For the creation of these graphics in the well-known formats PDF, EPS and PS,  $\LaTeX$  and possibly conversion tools shipped with the distribution are used. If the graphics are required in other file formats, either **ImageMagick** or **Ghostscript** can be invoked.

# Part I.

## User documentation

### 1. Introduction

The open source program *Inkscape* has provided an excellent resource for the simple and easy creation of images and diagrams using a graphical user interface. The work by Johan B. C. Engelen has further enhanced the ability of *Inkscape* to split a SVG file into a text component that can be compiled with  $\LaTeX$ , and an image component that can be imported as a PDF file. For further information see the documentation of [svg-inkscape on CTAN](http://www.ctan.org/pkg/svg-inkscape)<sup>1</sup>. The procedure described therein is taken up and consistently expanded. Thus, it is now possible to include a SVG file into a  $\LaTeX$  document where the text within the SVG graphic will be rendered natively by  $\LaTeX$ .

Both packages `svg` and `svg-extract` rely heavily upon executing commands from the shell using the `\ShellEscape` command—or respectively the old known `\write18`—for executing a variety of commands directly to the system. So it is necessary to include the flag `--shell-escape` when compiling documents using `svg` and/or `svg-extract`. The executed commands and the possibilities to adapt their invocation with the appropriate options are described later on in this documentation. All this is done automatically with the `\includesvg` command. If you don't want to use the `--shell-escape` flag, either for security reasons or because the export of the SVG files is done in another way, there's also the command `\includeinkscape` which includes files already exported by *Inkscape*.

<sup>1</sup><http://www.ctan.org/pkg/svg-inkscape>

An working installation of **Inkscape** is required for the automated integration of SVG graphics, whereby the installation path must be known to the operating system. This can be checked on shell by typing `inkscape -V`. Moreover, there are some required packages which are loaded by packages **svg** and **svg-extract** to provide the functionality. These are:

**scrbase** for the definition and handling of options in key-value-syntax  
**ifpdf, ifluatex, ifxetex** for flow control depending on the used L<sup>A</sup>T<sub>E</sub>X engine  
**pdfdoccmds, shellesc** to allocate the same primitives independent of the used L<sup>A</sup>T<sub>E</sub>X engine  
**ifplatform** to control the file access depending on the operating system  
**trimspaces** to remove unwanted spaces in file paths  
**graphicx** for including the graphic files after the **Inkscape** export  
**xcolor,transparent** are possibly needed by the separate L<sup>A</sup>T<sub>E</sub>X files created by **Inkscape**  
**xr** is used by **svg-extract** in order to include labels within the independent graphic files

If you want to pass options to package **graphicx**, you must either load it before package **svg**

```
\usepackage[options]{graphicx}
...
\usepackage[options]{svg}
```

or use `\PassOptionsToPackage`.

```
\PassOptionsToPackage{options}{graphicx}
...
\documentclass[options]{class}
...
\usepackage[options]{svg}
```

The usage of packages **xcolor** and **transparent** can be switched off while loading package **svg**. See the two options `usexcolor` and `usetransparent` below.

## 2. Usage of package `svg`

The purpose of this package is to include SVG graphics into a L<sup>A</sup>T<sub>E</sub>X document. The command `\includesvg` is defined which does all necessary steps for this task. It first launches the export of a SVG file to a supported file format with Inkscape, if necessary, and includes the exported graphic file afterwards. The usage and the syntax is quite similar to the command `\includegraphics` from the **graphicx** package. In fact, the inclusion of the exported graphic file is done with `\includegraphics`.

`usexcolor` (opt.) The packages **xcolor** and **transparent** are loaded by default at the end of package **svg**. The listed options are intended to prevent these packages from loading. They are the only options which have to be given while loading the **svg** package. All supported boolean values (`true/on/yes/false/off/no`) can be assigned to `usexcolor` and `usetransparent`, while `noxcolor` and `notransparent` don't accept any value.

`usetransparent` (opt.)

`noxcolor` (opt.)

`notransparent` (opt.)

```
\usepackage[options]{svg}
```

### 2.1. General settings

`\svgsetup` All other options described in detail below can also be changed after loading the package either in the preamble or within the document. They don't have to be given as optional argument to `\usepackage[options]{svg}` but can be set by using macro `\svgsetup{options}` where `{options}` is a comma separated list of options. Settings with `\svgsetup` are done in the current scope which means globally or within the current group.

```
\svgsetup{options}
```

Further, it's possible to reset any setting locally with the optional argument of the commands `\includesvg[options]{svg filename}` or `\includesvg[options]{graphic filename}`.

`\svgpath` Most likely you want to organize your SVG files in a separate folder either as a subfolder in the working directory or elsewhere in your local folder structure. For this purpose, a list of root paths to SVG files can be specified using the `\svgpath` command in the same way as `\graphicspath` is used. Every path has to be given in a group of braces `{}`—even if there is only one—and terminate with `/` last. For example:

```
\svgpath{{svg/}{usr/local/svg/}}
```

would cause the system to look first in the subdirectory `svg/` and afterwards in the absolute path `/usr/local/svg/`. Further, if no path was specified with `\svgpath` or the desired file wasn't found, all directories given with `\graphicspath` are searched too. Please keep in mind that the current working directory is browsed first in any case. It's recommended to avoid any spaces and/or quotes respectively `\dq` both in paths and file names, especially when DVI output is active.

## 2.2. Options for the invocation of *Inkscape*

`inkscape` (opt.) This option controls, when the export with *Inkscape* is invoked and is `true` by default.

`false/off/no`

*Inkscape* won't be invoked in any case, no export is done.

`true/on/yes/newer/onlynewer`

The export with *Inkscape* will only be done, if the exported graphic file either does not exist or the file modification date of the SVG file is newer than that of the exported graphic file. Thus the compilation time of the  $\LaTeX$  document can be reduced to the necessary minimum. Unfortunately a primitive like `\pdffilemoddate` is missing for XeTeX, so with this engine, the behaviour will be the same as `inkscape=forced`.

`forced/force/overwrite`

The *Inkscape* export will definitely be done, any already existing exported file will be overwritten regardlessly.

In addition to controlling the export behavior, the option `inkscape` can also be used to make additional settings, which then acts as a wrapper for the options described below.

`pdf/eps/ps/png`

see `inkscapeformat=pdf/eps/ps/png`

`latex/nolatem`

see `inkscapelatem=true/false`

`drawing/page`

see `inkscapearea=drawing/page`

`<integer>dpi`

see `inkscapedpi=<integer>`

`inkscapepath` (opt.) The option `inkscapepath` specifies, where the resulting files of the *Inkscape* export should be located. The subfolder `./svg-inkscape/` within the current working directory is used by default (`inkscapepath=basesubdir`).

`svgdir/svgpath`

The PDF/EPS/PS/PNG graphic files as well as the  $\LaTeX$  files generated by *Inkscape* will be located in the same directory as the corresponding SVG file.

`svgsubdir/svgsubpath`

Within the folder of the encountered SVG file, all exported files will be located in a subfolder named `svg-inkscape/`.

`basedir/basepath/jobdir/jobpath`

All exported files will be located in the current working directory.

`basesubdir/basesubpath/jobsubdir/jobsubpath`

A subfolder named `svg-inkscape/` within the current working directory will be used for files generated by *Inkscape*.

`/path/to/somewhere/`

It is also possible to give a custom path, either relative to the current working directory (`./relative/path/`) or as an absolute path.

- `inkscapefilename` (opt.) The file names of the **Inkscape** export are derived from the name of the base SVG file and can be modified with `inkscapefilename=<filename>`. It's possible to use counters for specifying the name of the exported file. Repeatedly specifying the same file name will overwrite previously created files.
- `inkscapeexe` (opt.) For including a SVG file, **Inkscape** is used to separate the text and image from the SVG file itself. In order to execute the command line tool from shell, the path where the executable is located has to be known to the operating system. You can check this by typing `inkscape -V` into the shell. If this check fails and you don't want to change environment variable `path` on your OS, you can use option `inkscapeexe` to set the absolute path where the executable of **Inkscape** is located. The option is set to `inkscapeexe=inkscape` by default.
- `inkscapeformat` (opt.) With this option, the **Inkscape** export format can be controlled. Valid values are `pdf`, `eps`, `ps` and `png`, where a  $\LaTeX$  export is not possible for `png` and option `inkscapelatex` won't have any effect. By default, `inkscapeformat=pdf` is set unless DVI output was detected. In this case `inkscapeformat=eps` is the default setting.
- `inkscapelatex` (opt.) If option `inkscapelatex=true` is set, the output is split into a separate PDF/EPS/PS file (see option `inkscapeformat`) and a corresponding  $\LaTeX$  file. This is the default setting. Setting `inkscapelatex=false` will result in a single PDF/EPS/PS file, where any contained text won't be rendered by  $\LaTeX$ .
- `inkscapearea` (opt.) This option controls which area of the SVG file should be exported, `drawing` is set by default.
- drawing/crop**  
The area exported corresponds to the bounding box of all objects in a drawing, including any that are not on the page.
- page/nocrop**  
The area exported will correspond to the defined page area within the SVG file.
- `inkscaledpi` (opt.) The resolution used either for PNG export or for fallback rasterization of filtered objects when exporting to PDF/EPS/PS file. For PNG export it is set to 300 dpi by default, if no value was given. The given value should be a positive integer. The default behaviour can be reversed after a given value with `inkscaledpi=\relax`.
- `inkscapeopt` (opt.) You can use this option to pass additional switches to the **Inkscape** command line tool. For further information see the documentation of **Inkscape**<sup>2</sup>.
- `svgextension` (opt.) The package assumes SVG files with `.svg` extension as source for the **Inkscape** export. This option can be used to change this behaviour. For example, in order to process `.dia` files instead of `.svg` you could use

```
\includesvg[svgextension=dia,<additional options>]{<filename>}
```

## 2.3. Options for the graphic inclusion

- `width` (opt.) The width of the included graphic file can be specified via the `width` option and the height
- `height` (opt.) by the `height` option. If both the width and height are specified, the figure will be scaled
- `distort` (opt.) such that neither of the specified dimensions is exceeded, unless option `distort=true` is
- `scale` (opt.) given.<sup>3</sup> If `width` and/or `height` once have been set, this can be undone by setting them to `Opt` or `\relax`. If neither `width` nor `height` are set, the included graphic file can also be scaled by setting `scale` to a positive real number.
- `pretex` (opt.) Commands prior and post to the inclusion of the graphic file may be desired, such as font or
- `aptex` (opt.) color commands. The options `pretex` and `aptex` are provided where the  $\LaTeX$  code given to `pretex` is included before the graphic file and `aptex` right afterwards. For example, to change the size of the included text one could use:

```
\includesvg[pretex=\tiny,<additional options>]{<svg filename>}
```

<sup>2</sup><https://inkscape.org/de/doc/inkscape-man.html>

<sup>3</sup>to provide compatibility for package `graphicx`, it's possible to use `keepaspectratio=true` as alias for `distort=false` and the other way round

- `draft` (opt.) This option can be used with boolean values and is equal to the identically named option of the **graphicx** package. If the `draft` option is given to **graphicx**, it's activated for **svg** as well.
- `lastpage` (opt.) A [bug](#)<sup>4</sup> concerning the L<sup>A</sup>T<sub>E</sub>X export has been reported for **Inkscape** 0.91. It may happen that within the exported L<sup>A</sup>T<sub>E</sub>X file, it's attempted to include more pages of the PDF graphics than actually exist. The **svg** package attempts to bypass the resulting error.

Consequently, the total number of pages is read and only existing PDF pages are included, if both options `inkscapeformat=pdf` and `lastpage=true` are set. This is the default setting and can be switched off with `lastpage=false`. It's also possible to set the number of the last page included of a PDF graphic manually as optional parameter for `\includesvg` or `\includeinkscape`. For details, see the description of the respective commands.

## 2.4. Including SVG files

- `\includesvg` The command `\includesvg` to include a SVG file is quite similar to the `\includegraphics` command provided by the **graphicx** package.

```
\includesvg[parameters]{svg filename}
```

- `inkscape` (param.) It is used right in the same way but where `{svg filename}` is the file name of the SVG file, where any given file extension will be replaced with `.svg` ruthlessly. In order to change the source file format for the **Inkscape** export, you have to use parameter `svgextension`.
- `inkscapeformat` (param.)
- `inkscapecatex` (param.)
- `inkscapearea` (param.)
- `inkscaledpi` (param.)
- `inkscapeopt` (param.)
- `svgextension` (param.) If the given file is not located in the current working directory but elsewhere on your file system, the command `\svgpath` could be used to specify this path. It is recommended to avoid any spaces and/or quotes respectively `\dq` both in paths and file names. Especially when DVI output is active using quotes will certainly cause an error.
- `width` (param.)
- `height` (param.)
- `distort` (param.) The command `\includesvg` is intended to do an automated export with **Inkscape** at first, where the given SVG file is exported to a PDF/EPS/PS/PNG file (see `inkscapeformat`) and perhaps a correlating L<sup>A</sup>T<sub>E</sub>X file (see `inkscapecatex`). The export with **Inkscape** is only invoked, if the SVG file is newer than the exported graphic file or latter doesn't exist at all.<sup>5</sup> Once the export has been done, the graphic file and maybe the L<sup>A</sup>T<sub>E</sub>X file are included.
- `scale` (param.)
- `pretex` (param.)
- `apptex` (param.)
- `draft` (param.) All previously described options can also be used as optional parameters to `\includesvg` and do have the same effect as described before. However, the optional parameters specified have an effect only once when `\includesvg` is executed and remain unchanged afterwards.
- `lastpage` (param.) In addition to the use of boolean values, the parameter `lastpage` can also be assigned a specific (integer) page number, which defines the last used page of a PDF graphic. This, just like the identically named option, has an effect only when `inkscapeformat=pdf` is set.
- `angle` (param.)
- `origin` (param.) Both parameters correlate to the identically named parameters of the `\includegraphics` command provided by the **graphicx** package. However, unlike to `\includegraphics`, they `angle` and `origin` are *always evaluated after width, height, distort and scale* by `\includesvg`, regardless of the used order of the given parameters. This is mainly due to the inclusion of the L<sup>A</sup>T<sub>E</sub>X files corresponding to the graphic files generated by **Inkscape**.

## 2.5. Including already exported SVG files

- `\includeinkscape` If you don't want to make use of the automated export with **Inkscape** but the user interface provided by the **svg** package, you can use `\includeinkscape` instead of `\includesvg`.

```
\includeinkscape[parameters]{graphic filename}
```

<sup>4</sup><https://bugs.launchpad.net/ubuntu/+source/inkscape/+bug/1417470>

<sup>5</sup>Due to the lack of XeTeX to compare file modification dates, using this L<sup>A</sup>T<sub>E</sub>X engine leads to **Inkscape** exports with every run unless `inkscape=false` is used.

<code>inkscapeformat</code> (param.)	You can use it similar to <code>\includesvg</code> but <code>{\langle graphic filename \rangle}</code> has to be the filename
<code>inksapelatex</code> (param.)	of the already exported graphic file. If a valid file extension ( <code>.pdf/.eps/.ps/.png</code> ) is
<code>width</code> (param.)	given, the current setting for <code>inkscapeformat</code> is overwritten. It's even possible to specify a
<code>height</code> (param.)	file extension like <code>.pdf_tex</code> to activate <code>inksapelatex</code> . Furthermore, all optional parameters
<code>distort</code> (param.)	for <code>\includeinkscape</code> do have the same effect as described before for command <code>\includesvg</code>
<code>scale</code> (param.)	once when <code>\includeinkscape</code> is executed and remain unchanged afterwards.
<code>pretex</code> (param.)	
<code>apptex</code> (param.)	
<code>draft</code> (param.)	
<code>lastpage</code> (param.)	
<code>angle</code> (param.)	
<code>origin</code> (param.)	

### 3. Usage of package `svg-extract`

This package allows the extraction of independent graphic files out of SVG files which have been included and rendered with L<sup>A</sup>T<sub>E</sub>X by the `svg` package. This is particularly useful when attempting to provide images to journals or collaborators, and one wishes the image to appear exactly as it does within the original L<sup>A</sup>T<sub>E</sub>X document.

In order to extract to PDF, EPS, or PS files the programs `pstoeps`, `pstopdf` and `pdftops` are used which are usually provided by most of the L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> distributions. In addition, the command line tools of *ImageMagick* and *Ghostscript* can be invoked for converting images in formats like PNG, JPG, TIF or something else. It's also possible to create PDF, EPS or PS files with one of the two programs. Therefor the desired program—`magick` and/or `gswin32c/gswin64c` on Windows respectively `convert` and/or `gs` on unix-like operating systems—must be installed. By typing `\langle program \rangle --version` on shell, this can be checked.

If you want to extract independent graphic files from included SVG files, you only have to load `svg-extract`. All actions for the extraction process will be done by using `\includesvg` or `\includeinkscape`. Without any additional settings, the extraction will render the SVG file to the specified output formats(s) of choice using the same settings as specified within the two commands. Consequently, the scale between the image and text in the extracted files will remain identical to the scale within the document from which the SVG file was extracted.

In contrast to package `svg`, the console commands for graphic extraction are executed with each LaTeX run by package `svg-extract` when `--shell-escape` mode is activated. This behaviour can be switched of with option `extract=false`.

#### Important changes

In version v1.0 of package `svg` the extracted files were named like the numbering of the current `subfig` environment by default. As package `subfig` sometime causes problems and because of the large amount of different L<sup>A</sup>T<sub>E</sub>X packages which all provide the possibility to include subfigures with very different implemetations, this feature can't be provided reliably by `svg-extract`. See option `extractname` for further information.

#### 3.1. General settings

<code>on</code> (opt.)	This options have to be given while loading the <code>svg-extract</code> package and are intended to
<code>off</code> (opt.)	toggle the functionality of this package. As both extracting and converting independent
	graphic files is invoked with every L <sup>A</sup> T <sub>E</sub> X run when <code>--shell-escape</code> is activated, the option
	<code>off</code> can be given to save compilation time, once the creation of all desired images has been
	done and they no longer need to be re-generated. The option <code>on</code> can be used to reactivate
	functionality of this package. This can also be done by using <code>extract=true/false</code> .
<code>\svgsetup</code>	With package <code>svg-extract</code> the applicable options for <code>\svgsetup{\langle options \rangle}</code> as well as pa-
<code>\includesvg</code>	rameters for the already described macros <code>\includesvg[\langle parameters \rangle]{\langle filename \rangle}</code> and
<code>\includeinkscape</code>	<code>\includeinkscape[\langle parameters \rangle]{\langle filename \rangle}</code> are extended. They can be used to control
	the process of graphic extraction and converting.
<code>extractangle</code> (param.)	With this parameter the graphic is rotated during the extraction process. The value is not
	inherited from <code>angle</code> if it was given by default. this can be achieved by setting:

```
\includesvg[angle=\langle angle \rangle,extractangle=inherit]{\langle filename \rangle}
```

All option described below can be used together with `\svgsetup` and are then valid in the current scope. There also exist identically named parameters for the optional arguments of

```
\includesvg[parameters]{svg filename}
\includeinkscape[parameters]{graphic filename}
```

These parameters have an effect only once when the specific command is executed and remain unchanged afterwards. These parameters are: `extract`, `extractpreamble`, `extractformat`, `extractruns`, `latexopt`, `extractwidth`, `extractheight`, `extractdistort`, `extractscale`, `extractangle`, `extractpretex`, `extractapptex`, `convert`, `convertformat`, `convertdpi`, `magicksetting`, `magickoperator`, `gsopt`, `gsdevice`, `clean`, `exclude`.

### 3.2. Extract independent graphic files

- `extract` (opt.) This option can be used with boolean values. Using `extract=true` activates the functionality for both extracting and converting which is the default setting, whereas `extract=false` turns it off completely.
- `extractpath` (opt.) The path where the extracted and converted files are located can be specified with option `extractpath`, whereas `extractpath=basesubdir` is set by default.
- `svgdir/svgpath`  
The extracted and converted independent graphic files are located in the same directory as the corresponding SVG file.
- `svgsubdir/svgsubpath`  
Within the folder of the encountered SVG file, all extracted and converted files will be located in a subfolder named `svg-extract/`.
- `basedir/basepath/jobdir/jobpath`  
All extracted and converted files will be located in the current working directory.
- `basesubdir/basesubpath/jobsubdir/jobsubpath`  
A subfolder named `svg-extract/` within the current working directory will be used for all extracted and converted files.
- `/path/to/somewhere/`  
It is also possible to give a custom path, either relative to the current working directory (`./relative/path/`) or as an absolute path.
- `extractname` (opt.) It's also possible to change the name for extracted and converted files. The default setting is `extractname=filenamenumbered`.
- `filename/name`  
The name of the exported **Inkscape** file is used and the suffix `-extract` is attached.
- `filenamenumbered/namenumbered/numberedfilename/numberedname`  
Same as above, but a prefix with the count of extracted files is used instead of the suffix.
- `numbered/section/numberedsection/sectionnumbered`  
The file name is composed by the number of extracted files and the current outline numbering.
- `{filename}`  
You can use any file name, the file extension is derived from option `extractformat`. It's possible to use counters for specifying the name of the extracted file. Repeatedly specifying the same file name will overwrite previously created files.
- `extractformat` (opt.) The included SVG file can be extracted from the document into a independent graphic file of type PDF, EPS or PS. The option can be used with either a single value (`extractformat=pdf`) or a comma separated list. For example,

```
\includesvg[extractformat={pdf,eps,ps}]{svg filename}
```

will extract the SVG file to both PDF and EPS formats and generates two independent graphic files. By default, `extractformat=pdf` is set unless DVI output was detected. In this case `extractformat=eps` is the default setting.

<code>extractwidth</code> (opt.) <code>extractheight</code> (opt.) <code>extractdistort</code> (opt.) <code>extractscale</code> (opt.) <code>extractpretex</code> (opt.) <code>extractapptex</code> (opt.)	<p>These options can be used to overwrite the settings given for the appearance of a SVG file within the document. For example, a SVG file should cover the entire text width within the document but be extracted to a fixed width, this can be done with:</p> <div style="border: 1px solid black; padding: 5px; background-color: #ffffcc; margin: 10px 0;"> <pre style="margin: 0;">\includesvg[width=\textwidth,extractwidth=500pt]{&lt;svg filename&gt;}</pre> </div> <p>Assigning the value <code>inherit</code> to one of these options—which is set by default—leads to the usage of the corresponding option of package <code>svg</code> (<code>width/height/scale/pretex/apptex</code>), whereas <code>extract...=\relax</code> can be used to ignore a parent option utterly. Only option <code>extractdistort</code> is initialized to <code>false</code> and does not inherit from <code>distort</code> by default.</p>
<code>extractpreamble</code> (opt.) <code>extractpreambleend</code> (opt.)	<p>Within the included and extracted SVG files any <math>\LaTeX</math> macro can be used either defined by the user—this should be done in the preamble of the <math>\LaTeX</math> document in which the SVG file is to be included—or provided by a package which is loaded. As the extraction process of the SVG files needs an auxiliary <math>\LaTeX</math> file all used packages and commands have to be known within this file. Consequently, the preamble of the current <math>\LaTeX</math> document is used for the extraction of the SVG file by default.</p> <p>However, it is possible to specify a different <i>preamble file</i> with the option <code>extractpreamble</code> where the file to use as the preamble is given as the argument—including maybe path, but file name and file extension in any case. The given preamble file is searched similar to SVG files meaning, every path given with <code>\svgpath</code> or <code>\graphicspath</code> is examined. The default definition of <code>extractpreamble</code> is <code>\jobname.tex</code>—more precisely the file extension given by option <code>latexext</code> is used—and should suffice for most cases. The preamble up to the line defined by the option <code>extractpreambleend</code> will be used, which is set to a default with <code>\begin{document}</code>.</p>
<code>\svghidepreamblestart</code> <code>\svghidepreambleend</code>	<p>In case, the preamble of the current <math>\LaTeX</math> document is used, there are maybe packages included or some parts within the preamble, which should not be used within the separate auxiliary <math>\LaTeX</math> file. These parts can be excluded if they are enclosed by <code>\svghidepreamblestart</code> and <code>\svghidepreambleend</code>.</p> <p>For example, your current <math>\LaTeX</math> document uses package <code>showframe</code> which causes some problems with the extraction of independent graphic files. So you want to get rid of it within the auxiliary <math>\LaTeX</math> file. This can be done with:</p> <div style="border: 1px solid black; padding: 5px; background-color: #ffffcc; margin: 10px 0;"> <pre style="margin: 0;">\documentclass{&lt;documentclassname&gt;} ... \usepackage{svg-extract} ... \svghidepreamblestart \usepackage{showframe} \svghidepreambleend ...</pre> </div>
<code>extractruns</code> (opt.)	<p>When extracting independent graphic files by compiling the generated auxiliary <math>\LaTeX</math> file, it's maybe necessary to do multiple <math>\LaTeX</math> runs on this file. The number of runs can be controlled with option <code>extractruns</code>. It's set to <code>extractruns=2</code> by default.</p>
<code>latexexe</code> (opt.) <code>latexopt</code> (opt.) <code>latexext</code> (opt.)	<p>For the extraction of an independent graphic file, the <math>\LaTeX</math> program is used which is set by the <code>latexexe</code> option. Depending on the <math>\LaTeX</math> processor used for the current <math>\LaTeX</math> document, it is set to either <code>pdflatex</code>, <code>lualatex</code>, <code>xelatex</code> or <code>latex</code> by default. It's also possible to specify additional flags or switches for the <math>\LaTeX</math> runs, which are performed during the extraction process by the <code>latexopt</code> option. If you are used to utilize a other file extension for <math>\LaTeX</math> files than <code>.tex</code>, option <code>latexext</code> can be used like <code>latexext=ltx</code>.</p>
<code>dvipsopt</code> (opt.) <code>pstoeps</code> (opt.) <code>pstopdf</code> (opt.) <code>pdftoeps</code> (opt.) <code>pdftops</code> (opt.)	<p>Depending on the used <math>\LaTeX</math> processor, the file type of the extracted graphic differs. In order to create all formats, requested with option <code>extractformat</code>, several converting tools provided by most of the <math>\LaTeX 2_{\epsilon}</math> distributions are maybe invoked. These are <code>dvips</code>, <code>ps2eps</code>, <code>ps2pdf</code> and/or <code>pdftops</code> and can't be changed. It's only possible to specify additional switches for every single tool with <code>dvipsopt</code>, <code>pstoeps</code>, <code>pstopdf</code>, <code>pdftoeps</code> and <code>pdftops</code>.</p>
<code>clean</code> (opt.)	<p>During the extraction process many files are generated for each SVG file extraction. So it's oftentimes desirable to automatically remove these temporary files. Using the option <code>clean=true</code> will remove any generated files created other than the extracted output format(s)</p>

requested. Setting `clean=false` is useful for debugging and set by default. Additionally, it's possible to use option `clean` with a list of file extensions in order to specify auxiliary files generated by package **svg-extract** to be deleted, for example `clean={log,aux}`.

`exclude` (opt.) Sometimes it may be necessary to extract and/or convert a SVG file without including it. If the flag `exclude` is specified, the SVG file will not be rendered in the current L<sup>A</sup>T<sub>E</sub>X document, but will be extracted and/or converted to the requested output format(s).

### 3.3. Convert extracted graphic files

Based on the extraction of independent graphic files, the **svg-extract** packages also provides the possibility to convert those extracted graphics in another format than PDF, EPS or PS with either **ImageMagick**—which is set by default—or **Ghostscript**.

`convert` (opt.) This option can be used to control the invocation of the conversion process. By default, `convert=false` is set. For Windows, there exist two different versions of **Ghostscript**, either 64 bit or 32 bit. If it is selected as converting tool the 64 bit executable is set by default.

`false/off/no`

No conversion is done.

`true/on/yes`

The conversion will be done with the current chosen converting tool.

`magick/imagemagick/convert`

The conversion is activated and **ImageMagick** is selected.

`gs/ghostscript`

The conversion is activated and **Ghostscript** is selected.

`gs64/ghostscript64`

This value activates **Ghostscript** as conversion tool and sets `gsex=gswin64c`. On unix-like operating systems, the value for `gsex` remains unchanged.

`gs32/ghostscript32`

The same as for the latter case applies, only option `gsex=gswin32c` is set on Windows.

`convertformat` (opt.) With this option, the desired output format(s) can be given. Multiple graphic formats can be specified in a list, for example something like `convertformat={png,jpg,tif}`. The value specified in `extractformat` is used as the source format for the conversion. If `extractformat` itself contains a file list, the first value within this list is considered. If `extractformat` is defined empty, the file generated anyway during the extraction is used.

#### Settings for specific converting formats

Maybe it's desired to apply varying settings for different output formats. Therefor some options described below can either be set for all converted files or for a specific output format. In particular, these are the options `convertdpi` as well as `magicksetting`, `magickoperator`, `gsdevice` and `gsopt`. All these mentioned options can be used like either  $\langle option \rangle = \langle value \rangle$  or  $\langle option \rangle = \{ \langle outputformat \rangle = \langle value \rangle \}$  and even  $\langle option \rangle = \{ \langle outputformat \rangle += \langle value \rangle \}$  where the desired output format is trailed with + as inner key.

The first variant is applied to all output formats in general. If one of these mentioned options is evaluated and a output format specific value was given like in the second variant, the general setting is overwritten. If the general setting should be used and extended by an additional output format specific settings, then the third variant is to be used. In this case, no output format specific setting (second variant) must not have been used.

If you want to reverse any setting, you only have to use `\relax` as a value, either for a general option ( $\langle option \rangle = \backslash relax$ ) or a specific one ( $\langle option \rangle = \{ \langle outputformat \rangle [+]= \backslash relax \}$ ).

`convertdpi` (opt.) This option controls the used density for all file formats or a specific one, whether **ImageMagick** or **Ghostscript** is used for the graphic conversion. The desired resolution of the converted file is given in dots per inch (DPI) either as a scalar value (e.g. `convertdpi=600`) or with different resolutions in x- and y-direction (e.g. `convertdpi=600x400`).

As described before, it's also possible to declare a specific resolution for each desired converting format. For example, you want to set different resolution for PNG and JPG formats and something for all other formats:

```
\svgsetup{%
  convertdpi={png=600},%
  convertdpi={jpg=150},%
  convertdpi=300%
}%
```

If a setting for a specific output format is given, any unspecific setting is overwritten, when the conversion to this format is done. With `convertdpi={output format}=relax}` a specific setting can be reversed.

Please note that not every graphic format support different resolutions in x- and y-direction. So using a value like `convertdpi=600x400` may not necessarily lead to the desired result. However, this is then due to the used conversion tool and not to the processing of the option.

### 3.3.1. Settings for the invocation of *ImageMagick*

`magickexe` (opt.) The conversion with *ImageMagick* via the `magick` or `convert` command-line tool can be controlled with these options. The option `magickexe` determines the used executable and is set to `magick` on Windows and otherwise to `convert` by default. Additionally, there are the two options `magicksetting` and `magickoperator` which can be used to define *settings* and *operators* for the conversion process. As described before, the two options `magicksetting` and `magickoperator` can be set for all output formats or a *specific* one either resetting or extending the general settings. For further information see the documentation of *ImageMagick command-line tool*<sup>6</sup>.

### 3.3.2. Settings for the invocation of *Ghostscript*

`gsexe` (opt.) The conversion with *Ghostscript* is done with command-line tool `gs` on unix-like operating systems and `gswin64c` or `gswin32c` on Windows. The executable can be changed with option `gsexe`. Because *Ghostscript* requires the specification of a device, there are some predefined for the most common output formats. These are:

```
\svgsetup{%
  gsdevice={png=png16m},gsdevice={jpeg=jpeg},gsdevice={jpg=jpeg},%
  gsdevice={tif=tiff48nc},gsdevice={tiff=tiff48nc},%
  gsdevice={eps=eps2write},gsdevice={ps=ps2write}%
}%
```

Furthermore, with `gsopt` additional switches for *Ghostscript* can be set. As described before, both `gsdevice` and `gsopt` can be defined in general or for specific output formats. For further information see the documentation of *Ghostscript*<sup>7</sup>.

## 4. Example

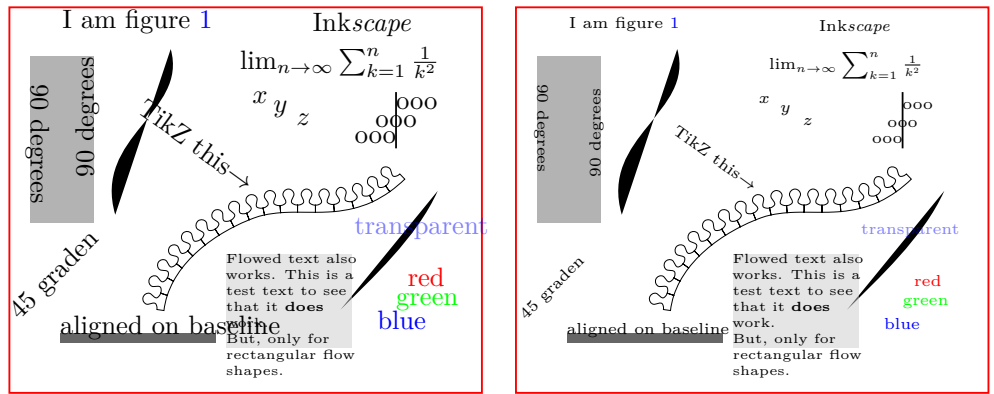

As an minimal example<sup>8</sup> take the following lines of code:

```
\documentclass{article}
\usepackage[T1]{fontenc}
\usepackage{svg}
\usepackage[off]{svg-extract}
\svgsetup{clean=true}
%\pdfsuppresswarningpagegroup=1
\usepackage{relsize}
```

<sup>6</sup><http://www.imagemagick.org/script/command-line-processing.php>

<sup>7</sup><https://ghostscript.com/doc/current/Use.htm>

<sup>8</sup>The image used here is a slightly modified version of the image used in the initial documentation on how to include a SVG file in L<sup>A</sup>T<sub>E</sub>X by Johan B. C. Engelen available as package *svg-inkscape* on CTAN.

(a) This text is too large!

(b) This text fits better.

Figure 1: An example figure with  $\text{\LaTeX}$  support

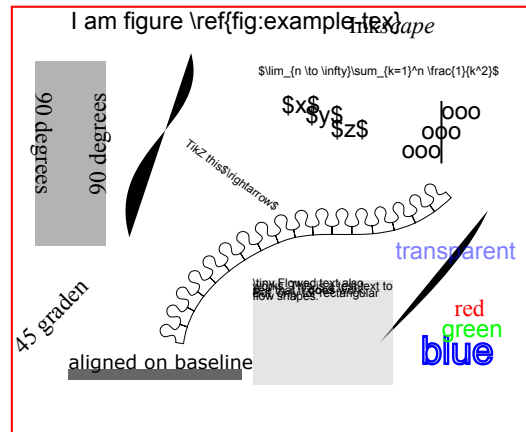

Figure 2: The same example figure without  $\text{\LaTeX}$  support

```

\usepackage{subcaption}
\begin{document}
\begin{figure}
\begin{minipage}{.5\linewidth}
\includesvg[width=\linewidth]{svg-example}%
\subcaption{This text is too large!}
\end{minipage}%
\begin{minipage}{.5\linewidth}
\includesvg[width=\linewidth,pretext=\relscale{0.6}]{svg-example}%
\subcaption{This text fits better.}
\end{minipage}
\caption{An example figure with \LaTeX-support}\label{fig:example}
\end{figure}
\begin{figure}\centering
\includesvg[%
width=.5\linewidth,inkscapelatex=false,extractformat={pdf,eps}%
]{svg-example}%
\caption{The same example figure without \LaTeX-support}
\end{figure}
\end{document}

```

If you are willing to compile the example, there are two aspects to consider. First, the included SVG file `svg-example.svg` has to be located in the current folder and is located in `(texmf)/doc/latex/svg/examples/`. Second, you have to run the desired  $\text{\LaTeX}$  engine with `--shell-escape` option enabled.

The output is shown in [Figure 1](#) and [Figure 2](#). Within this example the file `svg-example.svg` was included three times using the `\includesvg` command.

As you can see, [Figure 1a](#) is created with default settings, except for the width specification.

So the **Inkscape** export with L<sup>A</sup>T<sub>E</sub>X support is done as well as the extraction of a independent graphic file in PDF format as the **svg-extract** package was loaded.

However, the text is slightly overrunning the margins of the image, and so [Figure 1b](#)—which again uses the same **Inkscape** export results—decreases the font size of the text within the image relative using the `pretex` option together with the `\relscale` command provided by the **resize** package.

In [Figure 2](#) the same SVG file was used but without the export of a separate L<sup>A</sup>T<sub>E</sub>X file containing all text elements.

Feel free to use this given example to try out all the options and possibilities described in [section 2](#) for package **svg**. Especially if you want to use package **svg-extract** for the automated extraction of independent graphics ([subsection 3.2](#)) and their conversion to different graphic formats with **ImageMagick** and/or **Ghostscript** ([subsection 3.3](#)), this example can be easily used for the first steps.

## 5. Troubleshooting and reporting issues

When using the packages **svg** and **svg-extract**, the most likely occurring problems will be caused by calling the external programs. For this reason, a short package information is written into the log file right before each call of an external program via shell. If a file should have been created, both packages check after the external call, whether this file exists or not and raise an error or at least a warning, if this file is missing. If you got such a message, please check the log file for lines like:

```
Package svg Info: or Package svg-extract Info:
```

Right afterwards, there should appear `runsystem(<command>)...executed.` which you should try to execute manually from shell in the right directory. In most cases, the problem will be an invalid command call. If something goes wrong during the extraction/converting process of package **svg-extract**, it would make sense to set option `clean=false` to not delete any auxiliary files that might be needed.

If you are sure that the problem is not caused by the configuration of your operating system, you can send an error report either via email or create a new issue on GitHub. Both addresses can be found on the title.

### When using pdfL<sup>A</sup>T<sub>E</sub>X there are a lot of warnings

It may happen that several warnings like

```
pdfTeX warning: pdflatex.exe(file <filename>.pdf): PDF inclusion:
multiple pdfs with page group included in a single page
```

occur when including the PDF graphics exported with **Inkscape**. This is related to the handling of transparency effects within PDF files. Since pdfL<sup>A</sup>T<sub>E</sub>X version 1.40.15 or later, you can get rid of these messages by using `\pdfsuppresswarningpagegroup=1`. See also the discussion on [LaTeX Stack Exchange](#)<sup>9</sup> for more information.

## 6. Include SVG files created with **ROOT**

This section was originally written by Philip Ilten. In the hope that since then nothing has changed fundamentally in the described procedure, this passage remains in the documentation, even if it will almost certainly be relevant to experimental particle physicists only, who frequently use the analysis package **ROOT**.

**ROOT** has the ability to export directly to a SVG file, which means that it is possible to completely by-pass all of **ROOT**'s internal text rendering machinery, and let L<sup>A</sup>T<sub>E</sub>X handle the text natively. This means that all of the ugly fonts that are rendered by **ROOT** can

---

<sup>9</sup><http://tex.stackexchange.com/questions/76273/>

now be completely avoided, with the additional bonus of being able to add references within plots. So how does one go about using this package with **ROOT**?

1. Create the plot with **ROOT** as normal, but turn off all  $\LaTeX$  interpretation of text strings. This is a bit tricky, but can be accomplished by setting the font in **ROOT** to a precision of zero as described in the documentation for `TAttFill`<sup>10</sup>. Remember that the font is set by using the function `(TAttFill*)->SetTextFont(i)` with

$$i = (\text{font type}) \times 10 + (\text{font precision})$$

In the following lines of code, a `TStyle` is defined which sets the font to type “Courier New” with a precision of zero.

```
TStyle *style = new TStyle("style","style"); int FONT = 80;
style->SetTextFont(FONT);
style->SetLabelFont(FONT,"XYZ");
style->SetTitleFont(FONT,"XYZ");
style->SetTitleFont(FONT,"");
gROOT->SetStyle("style");
gROOT->ForceStyle();
```

Now, you can just use the well-known standard  $\LaTeX$  syntax for creating labels, etc. Note however, that backslashes have to be escaped due to interpretation of special characters by `C++`.

2. Print the plot as a SVG file.

```
gPad->Print("foo.svg");
```

3. Include the SVG file within the document using this package.

```
\usepackage{svg}
\usepackage{svg-extract}
\svgsetup{clean=true}
...
\includesvg[width=\linewidth]{foo}
```

Consider the following example image produced by **ROOT** in [Figure 3](#). This figure was generated by the **ROOT** macro `root.C`, provided within `<texmf>/doc/latex/svg/examples/`, which produces the file `root.svg` when run. The code used to produce this SVG file from within **ROOT** is

```
void root() {
    // Set the style.
    gStyle->SetTextFont(80);      gStyle->SetLabelFont(80,"XYZ");
    gStyle->SetTitleFont(80,"");  gStyle->SetTitleFont(80,"XYZ");
    gStyle->SetPalette(1);        gStyle->SetOptStat(0);

    // Draw the plot.
    TH2D *h = new TH2D("", "", 25, 0, 3.9, 25, 0, 3.9); TRandom r;
    for (int i = 0; i < 30000; i++) h->Fill(r.Gaus(2.,1), r.Gaus(2.,1));
    h->GetXaxis()->CenterTitle(); h->GetXaxis()->SetTitleOffset(2.5);
    h->GetYaxis()->CenterTitle(); h->GetYaxis()->SetTitleOffset(2.5);
    h->GetXaxis()->SetTitle("\\larger[2]$x$");
    h->GetYaxis()->SetTitle("\\larger[2]$y$");
    h->Draw("LEG02");

    // Draw additional text.
    TText *t = new TText(); t->SetTextAlign(31);
    t->DrawText(0.7, 0.9, "\\larger[2]$z(x,y) = \\frac{1}{\\sqrt{4\\pi^2}}\\exp\\left(- \\left(\\frac{(x-\\mu_x)^2}{2\\sigma_x^2} + \\frac{(y-\\mu_y)^2}{2\\sigma_y^2} \\right)\\right)$");

    // Print the plot.
```

<sup>10</sup><http://root.cern.ch/root/html/TAttText.html>

Figure 3: Rendering of a **ROOT** plot—no more *Comic CERNs*

```
gPad->Print("root.svg");
}
```

where the text produced within the **ROOT** plot is set to a precision of zero.

The plot was then included within this document using the following  $\text{\LaTeX}$  code

```
\begin{figure}
\centering%
\includesvg[%
inkscapearea=page,height=6cm,pretex=\tiny,convertformat=png%
]{root}%
\caption{Rendering of a \app{ROOT} plot---no more \emph{Comic CERNs}}%
\label{fig:root}%
\end{figure}
```

which includes the graphic as well as the  $\text{\LaTeX}$  file exported by **Inkscape**, produces the extracted PDF image (`root.pdf`) and converts this to a PNG image (`root.png`) by using **ImageMagick**. Enjoy plots from **ROOT** with natively rendered  $\text{\LaTeX}$ !

# Part II.

## Implementation

### A. Initialization

#### A.1. Packages

The package **svg** requires **scrbase** for options processing, the packages **ifluatex**, **ifpdf** and **ifxetex** for detecting the used L<sup>A</sup>T<sub>E</sub>X engine, **pdftexcmds** for pdfT<sub>E</sub>X primitives when using LuaT<sub>E</sub>X, **shellesc** and **ifplatform** for engine independent access to systems commands and files as well as **graphicx** for the inclusion of PDF files. The usage of packages **xcolor** and **transparent** can be switched of with the corresponding options. Package **svg-extract** only needs package **svg** itself.

```
1 (*base)
2 \RequirePackage{scrbase}[2016/06/14]
3 \RequirePackage{ifpdf}[2016/05/14]
4 \RequirePackage{ifluatex}[2016/05/16]
5 \RequirePackage{ifxetex}[2010/09/12]
6 \RequirePackage{pdftexcmds}[2016/05/21]
7 \RequirePackage{shellesc}[2016/06/07]
8 \RequirePackage{trimspaces}[2009/09/17]
9 \RequirePackage{graphicx}[1999/02/16]
10 \end{base}
11 (*extract)
12 \RequirePackage{svg}[2017/03/27]
13 \end{extract}
```

#### A.2. Helper macros

```
\svg@tempa Internal temporary macros. The catcode for double quotes are also temporarily changed.
\svg@tempb
\svg@box
\if@svg@tempswa
14 \newcommand*\svg@tempa{}
15 \newcommand*\svg@tempb{}
16 \newbox\svg@box
17 \newif\if@svg@tempswa
18 \edef\svg@catcodecodes@restore{%
19 \catcode'\noexpand\"the\catcode'\relax%
20 }
21 \@makeother\"%
```

### B. Including SVG files with package **svg**

#### B.1. Options

All options, which can be set either as package options or with `\svgsetup`, as well as the optional parameters for both user commands `\includesvg[parameters]{svg filename}` and `\includeinkscape[parameters]{graphic filename}` are defined with the interface provided by package **scrbase**.

```
22 \DefineFamily{SVG}
23 \DefineFamilyMember{SVG}
```

`\svg@deprecated@key` With version v2.00 the whole user interface was renewed. For reasons of compatibility, outdated options and parameters from version v1.0 are also provided. If an old key was given, a warning is issued and the valid key is used.

```

24 \newcommand*\svg@deprecated@key[3][svg]{%
25   \PackageWarning{#1}{%
26     The option key ‘#2’ is deprecated.\MessageBreak%
27     It’s recommended to use ‘#3’\MessageBreak%
28     instead%
29   }%
30   \FamilyOptions{SVG}{#3}%
31 }

```

Within the exported L<sup>A</sup>T<sub>E</sub>X files of *Inkscape*, some commands are used out of additional packages. But maybe the user doesn’t want to load this packages anyways.

<code>usexcolor</code> (opt.)	Options for preventing packages <b>xcolor</b> and <b>transparent</b> to be loaded.
<code>noxcolor</code> (opt.)	
<code>\ifsvg@use@xcolor</code>	<code>32 \newif\ifsvg@use@xcolor</code>
<code>usetransparent</code> (opt.)	<code>33 \FamilyBoolKey{SVG}{usexcolor}{@svg@use@xcolor}</code>
<code>nottransparent</code> (opt.)	<code>34 \DeclareOption{noxcolor}{\FamilyOptions{SVG}{usexcolor=false}}</code>
<code>\ifsvg@use@transparent</code>	<code>35 \newif\ifsvg@use@transparent</code>
	<code>36 \FamilyBoolKey{SVG}{usetransparent}{@svg@use@transparent}</code>
	<code>37 \DeclareOption{nottransparent}{\FamilyOptions{SVG}{usetransparent=false}}</code>

They are only available during the loading process of package **svg**.

```

38 \AtEndOfPackage{%
39   \RelaxFamilyKey{SVG}{usexcolor}%
40   \RelaxFamilyKey{SVG}{usetransparent}%
41   \ifsvg@use@xcolor%
42     \RequirePackage{xcolor}[2016/05/11]%
43   \else%
44     \AfterPackage*{xcolor}{%
45       \PackageWarning{svg}{Package ‘xcolor’ was loaded anyway}%
46     }%
47   \fi%
48   \ifsvg@use@transparent%
49     \RequirePackage{transparent}[2016/05/16]%
50   \else%
51     \AfterPackage*{transparent}{%
52       \PackageWarning{svg}{Package ‘transparent’ was loaded anyway}%
53     }%
54   \fi%
55 }

```

### B.1.1. The invocation of *Inkscape*

The Application *Inkscape* is used to create includable graphic files in a desired format (PDF/EPS/PS/PNG) out of files in SVG format, whereas the support of L<sup>A</sup>T<sub>E</sub>X can optionally be used.

<code>inkscape</code> (opt.)	The intension of option <code>inkscape</code> is to control the running behaviour of <i>Inkscape</i> . It can
<code>\svg@ink@mode</code>	be switched off at all ( <code>inkscape=false</code> ) or invoked only if necessary ( <code>inkscape=true</code> ) or the command line call can be forced with every L <sup>A</sup> T <sub>E</sub> X run ( <code>inkscape=forced</code> ). Additionally, option <code>inkscape</code> can be used as wrapper for options <code>inkscapeformat</code> , <code>inkscapecatex</code> , <code>inkscapearea</code> and <code>inkscapecdpi</code> , which are declared later.

```

56 \newcommand*\svg@ink@mode{}
57 \DefineFamilyKey{SVG}{inkscape}[true]{%
58   \lowercase{\svg@sanitize@dq\svg@tempb{#1}}%
59   \FamilySetNumerical{SVG}{inkscape}{svg@tempa}{%
60     {false}{0},{off}{0},{no}{0},%

```

```

61 {true}{1},{on}{1},{yes}{1},{onlynewer}{1},{newer}{1},%
62 {force}{2},{forced}{2},{overwrite}{2},%
63 {pdf}{3},{eps}{4},{ps}{5},{png}{6},%
64 {drawing}{7},{crop}{7},%
65 {page}{8},{nocrop}{8},%
66 {tex}{9},{latex}{9},{exportlatex}{9},{latexexport}{9},%
67 {notex}{10},{nolatemx}{10},{noexportlatex}{10},{nolatemxexport}{10},%
68 {latemxnoexport}{10},{raw}{10},{plain}{10},{simple}{10}%
69 }\svg@tempb}%
70 \ifx\FamilyKeyState\FamilyKeyStateProcessed%

```

Setting the mode for invoking *Inkscape*...

```

71 \ifnum\svg@tempa<\thr@@\relax%
72 \let\svg@ink@mode\svg@tempa%
73 \else%

```

...and the part as wrapper for different options.

```

74 \ifcase\svg@tempa\relax\or\or\or% pdf
75 \FamilyOptions{SVG}{inkscapeformat=pdf}%
76 \or% eps
77 \FamilyOptions{SVG}{inkscapeformat=eps}%
78 \or% ps
79 \FamilyOptions{SVG}{inkscapeformat=ps}%
80 \or% png
81 \FamilyOptions{SVG}{inkscapeformat=png}%
82 \or% drawing
83 \FamilyOptions{SVG}{inkscapearea=drawing}%
84 \or% page
85 \FamilyOptions{SVG}{inkscapearea=page}%
86 \or% tex
87 \FamilyOptions{SVG}{inkscapelatex=true}%
88 \or% notex
89 \FamilyOptions{SVG}{inkscapelatex=false}%
90 \fi%
91 \fi%

```

It's also possible to set the option `inkscape dpi` by passing a number followed by `dpi` like `inkscape=300dpi`.

```

92 \else% dpi
93 \def\svg@tempa##1dpi##2\@nil{%
94 \ifstr{##2}{dpi}{\FamilyOptions{SVG}{inkscape dpi=##1}}{%
95 }%
96 \lowercase{\expandafter\svg@tempa\svg@tempb dpi}\@nil%

```

In version v1.0 the option `inkscape` was used to set both the executable and options for *Inkscape*. This is taken into account here.

```

97 \ifx\FamilyKeyState\FamilyKeyStateProcessed\else%

```

Splitting executable from options with delimited macros. After calling `\svg@tempa` with the given value, the part for the executable is stored in `\svg@tempa` and the option part—which is recognized by the first `-` character—in `\svg@tempb`.

```

98 \svg@quotes@remove[#{#1}]{\svg@tempb}%
99 \def\svg@tempa##1-##2\@nil{%
100 \IfArgIsEmpty{##2}{\def\svg@tempb{} }{%
101 \def\svg@tempa####1-\@nil{\def\svg@tempb{-####1}}%

250 \DefineFamilyKey{SVG}{inkscapepath}{%
251 \renewcommand*\svg@out@name{#{1}\svg@file@suffix}%
252 \FamilyKeyStateProcessed%
253 }

```

### B.1.4. Options for the inclusion of graphics

After the graphic export with *Inkscape*, the inclusion of those graphics can be controlled with the following options.

<pre> width (opt.) \svg@param@width height (opt.) \svg@param@width distort (opt.) keepaspectratio (opt.) \if@svg@param@distort scale (opt.) \svg@param@scale </pre>	<pre> These options determine the size of the included graphics. The usage of \relax as value resets the respective option to the default behavior.  254 \newcommand*\svg@param@width{\z@} 255 \DefineFamilyKey{SVG}{width}{% 256   \FamilyKeyStateUnknownValue% 257   \svg@ifvalueisrelax{#1}{% 258     \renewcommand*\svg@param@width{\z@}% 259     \FamilyKeyStateProcessed% 260   }{% 261     \FamilySetLengthMacro{SVG}{width}{\svg@param@width}{#1}% 262     \ifx\FamilyKeyState\FamilyKeyStateProcessed% 263       \ifdim\svg@param@width&lt;\z@\relax% 264         \FamilyKeyStateUnknownValue% 265       \fi% 266     \fi% 267   }% 268 } 269 \newcommand*\svg@param@height{\z@} 270 \DefineFamilyKey{SVG}{height}{% 271   \FamilyKeyStateUnknownValue% 272   \svg@ifvalueisrelax{#1}{% 273     \renewcommand*\svg@param@height{\z@}% 274     \FamilyKeyStateProcessed% 275   }{% 276     \FamilySetLengthMacro{SVG}{height}{\svg@param@height}{#1}% 277     \ifx\FamilyKeyState\FamilyKeyStateProcessed% 278       \ifdim\svg@param@height&lt;\z@\relax% 279         \FamilyKeyStateUnknownValue% 280       \fi% 281     \fi% 282   }% 283 } 284 \newif\if@svg@param@distort 285 \FamilyBoolKey{SVG}{distort}{@svg@param@distort} 286 \DefineFamilyKey{SVG}{keepaspectratio}[true]{% 287   \FamilySetBool{SVG}{keepaspectratio}{@svg@tempswa}{#1}% 288   \ifx\FamilyKeyState\FamilyKeyStateProcessed% 289     \if@svg@tempswa% 290       \FamilyOptions{SVG}{distort=false}% 291     \else 292       \FamilyOptions{SVG}{distort=true}% 293     \fi% 294   \fi% 295 } 296 \newcommand*\svg@param@scale{1} 297 \DefineFamilyKey{SVG}{scale}{% 298   \FamilyKeyStateUnknownValue% 299   \svg@ifvalueisrelax{#1}{% 300     \renewcommand*\svg@param@scale{1}% 301     \FamilyKeyStateProcessed% 302   }{% 303     \ifisdimension{#1\p@}{% 304       \ifdim\dimexpr#1\p@\relax&gt;\z@\relax% 305         \renewcommand*\svg@param@scale{#1}% 306       \FamilyKeyStateProcessed% 307     \fi% 308   }{}% 309 }% 310 } </pre>
---	--

`pretex` (opt.) For executing code right before or after the graphic inclusion, two hooks are defined.

```

\svg@param@pretex
  apptex (opt.)
\svg@param@apptex
  postex (opt.)
311 \newcommand*\svg@param@pretex{}
312 \let\svg@param@pretex\relax
313 \DefineFamilyKey{SVG}{pretex}{%
314   \svg@ifvalueisrelax{#1}{%
315     \let\svg@param@pretex\relax%
316   }{%
317     \def\svg@param@pretex{#1}%
318   }%
319   \FamilyKeyStateProcessed%
320 }
321 \newcommand*\svg@param@apptex{}
322 \let\svg@param@apptex\relax
323 \DefineFamilyKey{SVG}{apptex}{%
324   \svg@ifvalueisrelax{#1}{%
325     \let\svg@param@apptex\relax%
326   }{%
327     \def\svg@param@apptex{#1}%
328   }%
329   \FamilyKeyStateProcessed%
330 }
331 \DefineFamilyKey{SVG}{postex}{%
332   \svg@deprecated@key{postex=#1}{apptex=#1}%
333 }

```

`lastpage` (opt.) For *Inkscape* 0.91 a bug concerning the L<sup>A</sup>T<sub>E</sub>X export has been reported (<https://bugs.launchpad.net/ubuntu/+source/inkscape/+bug/1417470>). Sometimes the L<sup>A</sup>T<sub>E</sub>X file created by *Inkscape* tries to include more pages than actually are present in the PDF file. To work around this problem, a patch is provided. For this purpose, the total page number is read from the PDF file.

```

\svg@param@lastpage (counter)
334 \newcounter{svg@param@lastpage}
335 \DefineFamilyKey{SVG}{lastpage}{%
336   \FamilySetNumerical{SVG}{lastpage}{svg@tempa}{%
337     {false}{0},{off}{0},{no}{0},{ignore}{0},%
338     {true}{1},{on}{1},{yes}{1},{auto}{1}%
339   }{#1}%
340   \ifx\FamilyKeyState\FamilyKeyStateProcessed%
341     \ifcase\svg@tempa\relax% false
342     \FamilySetCounter{SVG}{lastpage}{svg@param@lastpage}{\m@ne}%
343     \or% true
344     \FamilySetCounter{SVG}{lastpage}{svg@param@lastpage}{\z@}%
345     \fi%
346   \fi%
347 }

```

`draft` (opt.) The option `draft` has the same effect as the eponymous option of package **graphicx**.

```

\if@svg@draft
348 \newif\if@svg@draft
349 \FamilyBoolKey{SVG}{draft}{@svg@draft}
350 \AtBeginDocument{\if@svg@draft\else\ifGin@draft\@svg@drafttrue\fi\fi}

```

## B.2. Handling path information

Both packages **svg** and **svg-extract** should be able to handle user-defined input and output paths. As there is the possibility for users to provide paths with or without quotes to L<sup>A</sup>T<sub>E</sub>X, this is taken into account.

`\svg@deactivate@dq` In order to avoid errors concerning file names with package **babel** and its active double quotes, this command is defined.

```

351 \newcommand*\svg@deactivate@dq{}

```

```

352 \AfterPackage*{babel}{%
353   \renewcommand*{svg@deactivate@dq}{\bbl@deactivate{}}%
354 }

```

`\svg@sanitize@dq` Save expansion of the second argument in the macro from the first argument with deactivated double quotes.

```

355 \newcommand*{svg@sanitize@dq}[2]{%
356   \begingroup%
357   \svg@deactivate@dq%
358   \edef\svg@tempa{\endgroup\def\noexpand#1{#2}}%
359   \svg@tempa%
360 }

```

`\svg@quotes@remove` and `\svg@quotes@@remove` These two commands are used to remove all occurring quotes within a string. The only argument passed to `\svg@quotes@remove` is not the string itself but a macro in which a string is stored.

```

361 \newcommand*{svg@quotes@remove}[2] []{%
362   \begingroup%
363   \IfArgIsEmpty{#1}{\def\svg@tempb{#2}}{\def\svg@tempb{#1}}%
364   \svg@sanitize@dq\svg@tempa{\svg@tempb}%
365   \expandafter\svg@quotes@check\expandafter{\svg@tempa}%
366   \expandafter\svg@quotes@@remove\svg@tempa""\@nil%
367   \edef\svg@tempb{%
368     \endgroup%
369     \def\noexpand#2{\svg@tempa}%
370     \if@svg@quotes@found%
371       \noexpand\@svg@quotes@foundtrue%
372     \else%
373       \noexpand\@svg@quotes@foundfalse%
374     \fi%
375   }%
376   \svg@tempb%
377 }
378 \newcommand*{svg@quotes@@remove}{
379 \def\svg@quotes@@remove#1"#2"#3\@nil{%
380 \IfArgIsEmpty{#2}{%
381   \edef\svg@tempa{#1}%
382 }{%
383   \svg@quotes@@remove#1#2#3""\@nil%
384 }%
385 }

```

`\svg@quotes@check` and `\if@svg@quotes@found` During the treatment of paths, it may be necessary to temporarily remove quotes and, if required, add them again later. For this purpose, the switch `\if@svg@quotes@found` as well as the commands `\svg@quotes@check` and `\svg@quotes@@check`, which controls the switch, are defined. As before, the string is passed in a macro to `\svg@quotes@check`.

```

386 \newif\if@svg@quotes@found
387 \newcommand*{svg@quotes@check}[1]{%
388   \expandafter\svg@quotes@@check#1""\@nil%
389 }
390 \newcommand*{svg@quotes@@check}{
391 \def\svg@quotes@@check#1"#2\@nil{%
392 \IfArgIsEmpty{#2}{\@svg@quotes@foundfalse}{\@svg@quotes@foundtrue}%
393 }

```

`\svg@remove@leadingchar` This command removes the single character in given with the first argument from the expanded macro in the second argument.

```

394 \newcommand*{svg@remove@leadingchar}[2]{%
395   \begingroup%
396   \svg@sanitize@dq\svg@tempa{#2}%

```

```

397 \def\svg@tempb{%
398 \def\svg@tempa####1\@nil{\def\svg@tempa{####1}}%
399 \kernel@ifnextchar#1%
400 {\expandafter\svg@tempa\@gobble}%
401 {\svg@tempa}%
402 }%
403 \expandafter\svg@tempb\svg@tempa\@nil%
404 \edef\svg@tempb{%
405 \endgroup%
406 \def\noexpand#2{\svg@tempa}%
407 }%
408 \svg@tempb%
409 }

```

`\svg@set@input@path` In order to import SVG files from different folders, `\svg@set@input@path` evaluates several macros, which are supposed to be used for holding different search folders. Any given path will be handled by `\svg@normalize@path`. The optional argument can be used to append an additional search path.

```

410 \newcommand*\svg@set@input@path[1] [] {%
411 \begingroup%
412 \svg@deactivate@dq%

```

If a path was already found and stored within `\svg@file@path`, it is searched first and wrapped in curly braces. This is necessary for using commands like `\input{(tex filename)}` within SVG files.

```

413 \ifx\svg@file@path\@empty\else%
414 \svg@normalize@path{\svg@file@path}%
415 \edef\svg@file@path{\{\svg@file@path\}}%
416 \fi%

```

Afterwards, several search paths are appended. If `\svg@path` was used, it is searched next. If nothing was found, `\graphicspath` is considered if defined followed by a path given in the third argument. If nothing was found yet, the standard `\input@path` is searched last.

```

417 \svg@append@input@path{\svg@file@path}\svg@input@path}%
418 \svg@append@input@path{\svg@file@path}\Ginput@path}%
419 \IfArgIsEmpty{#1}\{\svg@append@input@path{\svg@file@path}{\{#1\}}}%
420 \svg@append@input@path{\svg@file@path}\input@path}%

```

Finally, `\input@path` is set.

```

421 \edef\svg@tempa{%
422 \endgroup%
423 \ifx\svg@file@path\@empty\else%
424 \def\noexpand\input@path{\svg@file@path}%
425 \fi%
426 }%
427 \svg@tempa%
428 }

```

Only, if a certain search path is defined, it is added. The paths given in the first argument are compared to each path in the second argument and only new ones are added.

```

429 \newcommand*\svg@append@input@path[2] {%
430 \ifx#2\undefined\else%
431 \edef\svg@tempb{#2}%
432 \expandafter\@tfor\expandafter\svg@tempa\expandafter:\expandafter=%

654 \endgroup%
655 }
656 \fi

```

### B.3. Optional Parameters for user commands

`\svg@local@param@set` Most of the package options can also be used as optional parameters for `\includesvg` or `\includeinkscape`. Some of them are overloaded for the usage as optional argument and there are some keys, which *only* can be used as optional parameters. This is realized in such a way that `\svg@local@param@use` is extended with `\svg@local@param@def` by the definition of local keys during the loading of package **svg**.

```

657 \newcommand*\svg@local@param@set[1]{%
658     \svg@local@param@use%
659     \FamilyOptions{SVG}{#1}%

```

As `\svg@local@param@set` is always used in a local group, it is possible to set `inkscapelatex` to `false`, if the output format was set to `png` with option `inkscapeformat`.

```

660 \ifstr{\svg@ink@format}{png}{\FamilyOptions{SVG}{inkscapelatex=false}}{}%

```

Using `distort=true` is only reasonable, if `height` and `width` are given.

```

661 \@svg@tempswafalse%
662 \ifdim\svg@param@width>\z@\relax\ifdim\svg@param@height>\z@\relax%
663     \@svg@tempswatruetrue%

```

```

664 \fi\fi%
665 \if@svg@tempswa\else%
666 \FamilyOptions{SVG}{distort=false}%
667 \fi%
668 }
669 \newcommand*{svg@local@param@use{}}
670 \newcommand*{svg@local@param@def[1]}{%
671 \edef\svg@local@param@use{%
672 \unexpanded\expandafter{\svg@local@param@use}\unexpanded{#1}%
673 }%
674 }

```

The family member is defined for both **svg** and **svg-extract**.

```

675 (*body)
676 \DefineFamilyMember[.param]{SVG}
677 </body>

```

## B.4. User commands

`\svgsetup` The macro `\svgsetup` can be used to change options after loading the package **svg** both in preamble and the document body. For compatibility reasons, `\setsvg` is also defined.

```

678 \newcommand*{svgsetup}{\FamilyOptions{SVG}}
679 \newcommand*{setsvg}{\FamilyOptions{SVG}}

```

`\svgpath` With `\svgpath` the user can give several root paths to SVG files in the same way as `\graphicspath` is used. The only difference is that a missing slash is added at the end of the path, if needed.

```

680 \newcommand*{svg@input@path{}}
681 \let\svg@input@path\input@path
682 \newcommand*{svgpath[1]}{%
683 \def\svg@tempa##1\@nil{%
684 \ifx\svg@tempb\bgroup%

1031 }

```

## B.6. Patches

`\svg@patches` For including the export results from *Inkscape* with L<sup>A</sup>T<sub>E</sub>X support enabled, there are some patches necessary for environment `picture` and `\includegraphics`. Those patches are done with `\svg@patches`.

```

1032 \newcommand*\svg@patches[1]{%
1033   \let\svg@picture@saved\picture%
1034   \let\picture\svg@picture@patched%
1035   \let\svg@includegraphics@saved\includegraphics%
1036   \let\includegraphics\svg@includegraphics@patched%
1037   \edef\svg@includegraphics@file{#1}%
1038 }

```

`\svg@picture@saved` In order to provide the possibility specify the desired width of a graphic, the appropriate `\unitlength` is calculated at the beginning of the `picture` environment.

`\svg@pictur@patched`

```

1039 \newcommand*\svg@picture@saved{}
1040 \newcommand*\svg@picture@patched{}
1041 \newcommand*\svg@pictur@patched{}
1042 \long\def\svg@picture@patched#1{\svg@pictur@patched@#1}
1043 \def\svg@pictur@patched@(#1,#2){%
1044   \svg@wrn@scale%

```

If a desired height is present, the resulting `\unitlength` is calculated with the ratio of the coordinates of the `picture` environment given as arguments for x- and y-direction by using `\Gscale@div`. With this factor, `\unitlength`—which is connected to the x-coordinate—can be scaled in a suitable manner.

```

1045 \ifdim\svg@param@height>\z@\relax%
1046   \Gscale@div\svg@tempa{#1\p@}{#2\p@}%
1047   \setlength\unitlength{\svg@param@height}%
1048   \setlength\unitlength{\svg@tempa\unitlength}%
1049 \ifdim\svg@param@width>\z@\relax%
1050   \ifdim\unitlength>\svg@param@width\relax%
1051     \setlength\unitlength{\svg@param@width}%
1052   \fi%
1053 \fi%
1054 \else%

```

If no height is given, `\unitlength` can be set easily.

```

1055 \ifdim\svg@param@width>\z@\relax%
1056   \setlength\unitlength{\svg@param@width}%
1057 \else%
1058   \setlength\unitlength{\svg@param@scale\unitlength}%
1059 \fi%
1060 \fi%

```

After setting `\unitlength`, the `picture` environment can be called with its original definition.

```
1061 \svg@picture@saved(#1,#2)%
1062 }
```

```
\svg@includegraphics@saved
\svg@includegraphics@patched
\svg@includegraphics@file
```

The patch to `\includegraphics` is meant to dissolve the **Inkscape** bug concerning the inclusion of more PDF pages than actually are existing.

The given optional parameters to `\includegraphics` are processed and the counter `svg@param@currpage` is set to the value of a given `page`. The value of parameter `width` is ignored.

```
1063 \DefineFamily{SVGpatch}
1064 \DefineFamilyMember{SVGpatch}
1065 \newcounter{svg@param@currpage}
1066 \setcounter{svg@param@currpage}{\m@ne}
1067 \FamilyCounterKey{SVGpatch}{page}{svg@param@currpage}
1068 \DefineFamilyKey{SVGpatch}{width}{\FamilyKeyStateProcessed}
1069 \newcommand*\svg@includegraphics@file{}
1070 \newcommand*\svg@includegraphics@saved{}
1071 \newcommand*\svg@includegraphics@patched[2] []{%
1072 \FamilyOptions{SVGpatch}{#1}%
```

If option `lastpage` was set to `false`, each page is included—even if it doesn't exist, which may cause errors.

```
1073 \ifnum\value{svg@param@lastpage}<\z@relax%
1074 \FamilySetCounter{SVGpatch}{page}{svg@param@currpage}{%
1075 \the\value{svg@param@lastpage}%
1076 }%
1077 \fi%
```

Only if counter `svg@param@lastpage` is smaller than `svg@param@currpage`, pages are included, where `svg@param@lastpage` was either given as a number with parameter `lastpage` or was automatically calculated with `\svg@get@lastpage`.

```
1078 \ifnum\value{svg@param@currpage}>\value{svg@param@lastpage}\relax\else%
```

A page is included with the original definition of `\includegraphics`. All optional parameters are passed.

```
1079 \svg@includegraphics@saved[#{#1}]{\svg@includegraphics@file}%
1080 \fi%
1081 }
```

## C. Extracting independent graphic files with `svg-extract`

### C.1. Options

For package **svg-extract** the user interface is extended. The following options can either be set with `\svgsetup` or be used as local optional parameters for `\includesvg` and `\includeinkscape`.

`\svg@dummy@key` If package **svg-extract** wasn't loaded, the following options are defined for package **svg** in order to raise a warning message. Primarily this is done for compatibility reasons.

```
1082 (*base)
1083 \DefineFamilyMember[.dummy]{SVG}
1084 \newcommand*\svg@dummy@key[2] []{%
1085 \@ifpackageloaded{svg-extract}{}{%
1086 \IfArgIsEmpty{#1}{%
1087 \DefineFamilyKey[.dummy]{SVG}{#2}{%
1088 \PackageWarning{svg}{%
```

```

1089         The option key '#2' can only\MessageBreak%
1090         be used with package 'svg-extract', but\MessageBreak%
1091         you didn't load it%
1092     }%
1093     \FamilyKeyStateProcessed%
1094 }%
1095 }{%
1096     \DefineFamilyKey[.dummy]{SVG}#{2}[#{1}]{%
1097     \PackageWarning{svg}{%
1098         The option key '#2' can only\MessageBreak%
1099         be used with package 'svg-extract', but\MessageBreak%
1100         you didn't load it%
1101     }%
1102     \FamilyKeyStateProcessed%
1103 }%
1104 }%

```

Before package **svg-extract** the given key #2 of family member .dummy is relaxed.

```

1105     \AfterPackage{svg-extract}{\RelaxFamilyKey[.dummy]{SVG}#{2}}%
1106 }%
1107 }
1108 </base>

```

### C.1.1. Controlling the extract process

**extract** (opt.) With option **extract** it can be controlled, if the extraction of independent graphic files should be done.

```

1109 <*base>
1110 \svg@dummy@key[true]{extract}
1111 </base>
1112 <*extract>
1113 \newif\if@svgx@run
1114 \DefineFamilyKey{SVG}{extract}[true]{%
1115     \lowercase{\def\svg@tempa{#1}}%
1116     \FamilySetNumerical{SVG}{extract}{svg@tempa}{%
1117         {false}{0},{off}{0},{no}{0},%
1118         {true}{1},{on}{1},{yes}{1},{onlynewer}{1},{newer}{1},%
1119         {overwrite}{1},{force}{1},{forced}{1},%
1120         {pdf}{2},{eps}{3},{ps}{4}}%
1121 }{\svg@tempa}%
1122 \ifx\FamilyKeyState\FamilyKeyStateProcessed%
1123     \ifcase\svg@tempa\relax% false
1124         \@svgx@runfalse%
1125     \or% true
1126         \@svgx@runtrue%
1127     \or% pdf
1128         \FamilyOptions{SVG}{extractformat=pdf}%
1129     \or% eps
1130         \FamilyOptions{SVG}{extractformat=eps}%
1131     \or% ps
1132         \FamilyOptions{SVG}{extractformat=ps}%
1133     \fi%
1134 \fi%
1135 }
1136 </extract>

```

**on** (opt.) Package options which can be used to switch functionality on or off during the loading of package **svg-extract**.

```

1137 <*extract>
1138 \DeclareOption{on}{\FamilyOptions{SVG}{extract=true}}
1139 \DeclareOption{off}{\FamilyOptions{SVG}{extract=false}}
1140 </extract>

```

`extractformat` (opt.) Option `extractformat` controls the output format (pdf/eps/ps). It is set to pdf or, if dvi output could be detected, to eps during initialization.

`\svgx@format`

pdf (opt.)

eps (opt.)

```

1141 (*base)

```

These two macros can be used to hide some parts of the preamble during reading the preamble of the main document.

```

1767 <*extract>
1768 \let\svghidepreamblestart\relax
1769 \let\svghidepreambleend\relax
1770 </extract>

```

### C.3. Auxiliary macros

```

\svg@extract The macro \svg@extract does the actual job of both extracting and converting independent
\svgx@stream@in graphic files. Since it is necessary to run it with --shell-escape enabled, the command
\svgx@read@line raises a warning if it is not activated. Afterwards, the package is finished.
\svgx@stream@out
\if@svgx@preamble@write
1771 <*base>
1772 \newcommand*\svg@extract[1]{%
1773 </base>
1774 <*extract>
1775 \ifnum\pdf@shellescape=\@ne\relax\else%
1776 \renewcommand*\svg@extract[1]{%
1777 \if@svgx@run%
1778 \begingroup%
1779 \edef\svg@tempa{#1}%
1780 \svg@quotes@remove{\svg@tempa}%
1781 \PackageWarning{svg-extract}{%
1782   You didn’t enable ‘shell escape’ (or ‘write18’)\MessageBreak%
1783   so it wasn’t possible to run the extraction for\MessageBreak%
1784   file ‘\svg@tempa’\MessageBreak%
1785 }%
1786 \endgroup%
1787 \fi%
1788 }%
1789 \expandafter\endinput%
1790 \fi

```

If `--shell-escape` is enabled, the command is defined with its intended functionality. Some macros and an input stream as well as an output stream are necessary for this.

```

1791 \newread\svgx@stream@in
1792 \newcommand*\svgx@read@line{}
1793 \newwrite\svgx@stream@out
1794 \newif\if@svgx@preamble@write
1795 \renewcommand*\svg@extract[1]{%

```

If option `extract` is enabled...

```

1796 \if@svgx@run%

```

...the macro `\svgx@get@out@sec` is used to get the current level numbering within the document and the counter for extracted graphics is stepped. After that, a separate auxiliary  $\LaTeX$  file is created for extracting independent graphic files. The macro `\svgx@get@out@sec` is used to get the current level numbering within the document. The specified preamble is read for this task, if it exists. It is first searched in the same folder as the SVG file and if it wasn't found, in any other valid folder for SVG files.

```

```

## C.4. Commands for the separate auxiliary L<sup>A</sup>T<sub>E</sub>X-file

For the extraction of independent graphics, an auxiliary L<sup>A</sup>T<sub>E</sub>X file is needed. Within this file, the following commands are used to include the desired graphic.

`\svgxsetbox` Within the preamble of the auxiliary L<sup>A</sup>T<sub>E</sub>X file, the desired graphic is used to setup a box, which is used both to define the papersize as well as for the output itself. The macro `\svgx@setbox` is executed twice, the first time in the preamble and the second time at the very end of `\AtBeginDocument` if package `etoolbox` was loaded.

The switch `\if@svgx@standalone` is defined for enabling classes to implement a different behaviour for **svg-extract** in standalone mode. For example, TUD-Script-classes are using this switch.

```

2344 \newif\if@svgx@standalone
2345 \newcommand*{svgxsetbox}[2] [] {%
2346   \@svgx@standalonetrue%
2347   \svgx@setbox{#1}{#2}%
2348   \scr@ifundefinedorrelax{AtEndPreamble}{%
2349     \let\svg@tempa\@firstofone%
2350   }{%
2351     \def\svg@tempa{\AtEndPreamble}%
2352   }%
2353   \svg@tempa{\AtBeginDocument{\svgx@setbox{#1}{#2}}}%
2354 }
2355 \newcommand*{svgx@setbox}[2] {%
2356   \box\svg@box{\svg@input[#{1},draft=false]{#2}}%
2357   \svgxsetpapersize%
2358 }

```

`\svgxsetpapersize` This macro sets all well known length macros for defining the paper size as well as the type area to the size of `\svg@box`.

```

2359 \newcommand*{svgxsetpapersize}{%
2360   \setlength\paperwidth{\the\wd\svg@box}%

```

Due to the fact, that the lengths for stock- and mediasizes are maybe set to `\relax`, these macros are checked with `\scr@ifundefinedorrelax`.

```

2361   \scr@ifundefinedorrelax{stockwidth}{}{%
2362     \setlength\stockwidth{\paperwidth}%
2363   }%
2364   \scr@ifundefinedorrelax{mediawidth}{}{%
2365     \setlength\mediawidth{\paperwidth}%
2366   }%
2367   \setlength\textwidth{\paperwidth}%
2368   \setlength\paperheight{\the\dimexpr\ht\svg@box+\dp\svg@box\relax}%
2369   \scr@ifundefinedorrelax{stockheight}{}{%
2370     \setlength\stockheight{\paperheight}%
2371   }%
2372   \scr@ifundefinedorrelax{mediaheight}{}{%
2373     \setlength\mediaheight{\paperheight}%
2374   }%
2375   \setlength\textheight{\paperheight}%

```

Any other length regarding the layout is set to have no influence at all. Hence the document has the same size as the graphic.

```

2376   \hoffset=-1in%
2377   \oddsidemargin=\z@%
2378   \evensidemargin=\z@%
2379   \voffset=-1in%
2380   \topmargin=\z@%
2381   \headheight=\z@%
2382   \headsep=\z@%
2383   \topskip=\z@%
2384   \footskip=\z@%
2385   \marginparsep=\z@%
2386   \marginparwidth=\z@%
2387   \marginparpush=\z@%
2388 }
2389 \@onlypreamble\svgxsetpapersize

```

`\svgxoutputbox` With `\svgxoutputbox` the created box is displayed.  
`\if@svgx@beamer`

```

2390 \newif\if@svgx@beamer
2391 \@ifclassloaded{beamer}{\@svgx@beamertrue}{}%
2392 \newcommand*{\svgxoutputbox{%
2393   \begingroup%
2394     \setlength\parindent{\z@}%
2395     \setlength\parskip{\z@}%
2396     \setlength\parfillskip{\z@}%
2397     \if@svgx@beamer%
2398       \setbeamertemplate{navigation symbols}{}%
2399       \begin{frame}[plain]%
