

The microtype package

Subliminal refinements towards typographical perfection

— IMPLEMENTATION —

R Schlicht v3.2b
w.m.l@gmx.net 2025/07/09

<https://github.com/schlcht/microtype>

The `microtype` package provides a \LaTeX interface to the micro-typographic extensions that were introduced by `pdfTeX` and some of which have since also propagated to `LuaTeX` and `XeTeX`: most prominently, character protrusion and font expansion, furthermore the adjustment of interword spacing and additional kerning, as well as hyphenatable letterspacing (tracking) and the possibility to disable all or selected ligatures. These features may be applied to customisable sets of fonts, and all micro-typographic aspects of the fonts can be configured in a straight-forward and flexible way. Settings for various fonts are provided.

Note that character protrusion requires `pdfTeX` (version 0.14f or later), `LuaTeX`, or `XeTeX` (at least version 0.9997). Font expansion works with `pdfTeX` (version 1.20 for automatic expansion) or `LuaTeX`. The package will by default enable protrusion and expansion if they can safely be assumed to work. Disabling ligatures requires `pdfTeX` (≥ 1.30) or `LuaTeX`, while the adjustment of interword spacing and of kerning only works with `pdfTeX` (≥ 1.40). Letterspacing is available with `pdfTeX` (≥ 1.40), `LuaTeX` (≥ 0.62) or `XeTeX`.

The alternative package `letterspace`, which also works with plain `\TeX`, provides the user commands for letterspacing only, omitting support for all other extensions (see section 7 of the User manual).

This package is copyright © 2004–2025 R Schlicht. It may be distributed and/or modified under the conditions of the [\LaTeX Project Public License](#), either version 1.3c of this license or (at your option) any later version. This work has the LPPL maintenance status ‘maintained’.

1 Implementation

The `docstrip` modules in this file are:

- `driver`: The documentation driver, only visible in the `dtx` file.
- `package`: The code for the `microtype` package (`microtype.sty`).
- `show`: The code for the `microtype-show` package (`microtype-show.sty`).
- `pdf-`: Definitions specific to `pdfTeX` (`microtype-pdfTeX.def`).
- `lua-`: Definitions specific to `LuaTeX` (`microtype-luatex.def`).
- `xe-`: Definitions specific to `XeTeX` (`microtype-xetex.def`).
- `letterspace`: The code for the `letterspace` package (`letterspace.sty`).
- `plain`: Code for `eplain`, `miniltx` (`letterspace` only).
- `debug`: Code for additional output in the log file.
Used for – surprise! – debugging purposes.
- `luofile`: Lua functions (`microtype.lua`).
- `config`: Surrounds all configuration modules.
 - `cfg-t`: Surrounds (Latin) text configurations.
 - `mt`: The main configuration file (`microtype.cfg`).
 - `bch`: Settings for Bitstream Charter (`mt-bch.cfg`).
 - `blg`: Settings for Bitstream Letter Gothic (`mt-blg.cfg`).
 - `cmr`: Settings for Computer Modern Roman (`mt-cmr.cfg`).
 - `ebg`: Settings for EB Garamond (`mt-EBGaramond.cfg`).
 - `ppl`: Settings for Palatino (`mt-ppl.cfg`).
 - `ptm`: Settings for Times (`mt-ptm.cfg`).
 - `pmn`: Settings for Adobe Minion (`mt-pmn.cfg`).
 - Contributed by *Harald Harders*.
 - `ugm`: Settings for URW Garamond (`mt-ugm.cfg`).
- `cfg-u`: Surrounds non-text configurations (U encoding).
 - `msa`: Settings for AMS ‘a’ symbol font (`mt-msa.cfg`).
 - `msb`: Settings for AMS ‘b’ symbol font (`mt-msb.cfg`).
 - `euf`: Settings for Euler Fraktur font (`mt-euf.cfg`).
 - `eur`: Settings for Euler Roman font (`mt-eur.cfg`).
 - `eus`: Settings for Euler Script font (`mt-eus.cfg`).
- `cfg-e`: Surrounds Euro symbol configurations.
 - `zpeu`: Settings for Adobe Euro symbol fonts (`mt-zpeu.cfg`).
 - `mvs`: Settings for marvosym Euro symbol (`mt-mvs.cfg`).

`test`: A helper file that may be used to create and test protrusion settings (`test-microtype.tex`).

And now for something completely different.

¹ `(*package|letterspace)`

1.1 Preliminaries

\MT@MT This is us.

```
2 \def\MT@MT
3 <package> {microtype}
4 <letterspace> {letterspace}
```

\MT@fix@catcode We have to make sure that the category codes of some characters are correct (the german package, for instance, makes " active). Probably overly cautious. Ceterum censeo: it should be forbidden for packages to change catcodes within the preamble. Polite as we are, we'll restore them afterwards.

```
5 \let\MT@restore@catcodes\empty
6 \def\MT@fix@catcode#1#2{%
7   \edef\MT@restore@catcodes{%
8     \MT@restore@catcodes
9     \catcode#1=\the\catcode#1\relax
10  }%
11  \catcode#1=#2\relax
12 }
13 \MT@fix@catcode{17}{14}%^Q (comment)
14 \MT@fix@catcode{24}{9}%^X (ignore)
15 <package>\MT@fix@catcode{33}{12}!
16 <package>\MT@fix@catcode{34}{12} "
17 \MT@fix@catcode{36}{3}$(math shift)
18 \MT@fix@catcode{39}{12}'
19 \MT@fix@catcode{42}{12}*
20 \MT@fix@catcode{43}{12}+
21 \MT@fix@catcode{44}{12}, ,
22 \MT@fix@catcode{45}{12}-
23 \MT@fix@catcode{58}{12}:
24 \MT@fix@catcode{60}{12}<
25 \MT@fix@catcode{61}{12}= =
26 \MT@fix@catcode{62}{12}>
27 <package>\MT@fix@catcode{63}{12}?
28 \MT@fix@catcode{94}{7}^ (superscript)
29 \MT@fix@catcode{96}{12}-
30 <package>\MT@fix@catcode{124}{12}|
```

These are all commands for the outside world. We define them here as blank commands, so that they won't generate an error if we are not running pdfTeX.

```
31 <package>
32 \newcommand*\DeclareMicrotypeSet[3][]{}

80 \MT@old@cmd\LoadMicroTypeFile \LoadMicrotypeFile
81 (/package)

```

\MT@warning Communicate.

```

82 \def\MT@warning{\PackageWarning\MT@MT}
83 \def\MT@warning@n{\MT@warning{\#1\@gobble}}
84 (*package)
85 \def\MT@info{\PackageInfo\MT@MT}
86 \def\MT@info@n{\MT@info{\#1\@gobble}}
87 \let\MT@vinfo@gobble
88 \def\MT@error{\PackageError\MT@MT}
89 \def\MT@warn@err{\MT@error{\#1}{%
90   This error message appears because you loaded the `\'\MT@MT'\MessageBreak
91   package with the option `verbose=errors'. Consult the documentation\MessageBreak
92   in \'MT@MT.pdf to find out what went wrong.}}

```

1.1.1 Debugging

\tracingmicrotype Cases for \tracingmicrotype:

```

\MT@dinfo
\MT@dinfo@n
0: almost none
1: + sets & lists
2: + heirs

```

3: + slots

4: + factors

```

93 (*debug)
94 \MT@warning@n{This is the debug version}
95 \newcount\tracingmicrotype
96 \tracingmicrotype=2
97 \def\MT@info#1{\PackageInfo{\MT@MT{#1}}{\MT@addto@annot{#1}}}
98 \def\MT@info@n#1{\PackageInfo{\MT@MT{#1}@gobble}{\MT@addto@annot{#1}}}
99 \let\MT@vinfo\MT@info@n
100 \def\MT@warning#1{\PackageWarning{\MT@MT{#1}}{\MT@addto@annot{Warning: #1}}}
101 \def\MT@warning@n#1{\PackageWarning{\MT@MT{#1}@gobble}{\MT@addto@annot{Warning: #1}}}
102 \def\MT@dinfo#1#2{\ifnum\tracingmicrotype<#1 \else\MT@info@n{#2}\fi}
103 \def\MT@dinfo@n#1#2{\ifnum\tracingmicrotype<#1 \else\MT@info@n{#2}\fi}

```

\tracingmicrotypeinpdf

Another debug method: font switches can be marked in the PDF file with a small caret, an accompanying popup text box displaying all debug messages.

Cases for \tracingmicrotypeinpdf:

1: show new fonts

2: + show known fonts

```
104 \newcount\tracingmicrotypeinpdf
```

Let's see how it works ... (if you don't see anything special on this page, your PDF viewer doesn't support annotations).

\tracingmicrotypeinpdf=2

```
\MT@pdf@annot
\MT@addto@annot
\ifMT@inannot
```

During font setup, we save the text for the popup in \MT@pdf@annot. (This requires pdfTeX ≥ 1.30 .) The pdftexcmds package provides pdfTeX's utility commands in LuaTeX, too.

```

105 \RequirePackage{pdftexcmds}
106 \newif\ifMT@inannot \MT@inannottrue
107 \let\MT@pdf@annot\empty
108 \def\MT@addto@annot#1{\ifnum\tracingmicrotypeinpdf>\z@ \ifMT@inannot
109   {\def\MessageBreak{^J}@spaces}%
110   \MT@xadd\MT@pdf@annot{\pdf@escapestring{#1^J}}}\fi\fi

```

\iftracingmicrotypeinpdfall

With \tracingmicrotypeinpdfall=false, the PDF output is (hopefully) identical, but some font switches will not be displayed; otherwise the output is affected, but *all* font switches are visible. In the latter case, we also insert a small kern so that multiple font switches are discernable.

```
111 \newif\iftracingmicrotypeinpdfall
```

\MT@show@pdfannot

A red caret is shown for fonts which are actually set up by *Microtype*, a green one marks fonts that we have already seen. The /Caret annotation requires a viewer for PDF version 1.5 (you could use /Text if you're using an older PDF viewer).

```

112 \ifx\directlua@\undefined \else
113   \protected\def\pdfannot{\pdfextension annot }\fi
114 \def\MT@show@pdfannot#1{%
115   \ifnum\tracingmicrotypeinpdf<#1 \else
116     \iftracingmicrotypeinpdfall\leavevmode\fi
117     \pdfannot height 4pt width 4pt depth 2pt {%
118       /Subtype/Caret
119       /T(\expandafter\string\font@name)
120       \ifcase#1\or
121         /Subj(New font)/C[1 0 0]
122       \else
123         /Subj(Known font)/C[0 1 0]
124       \fi
125     /Contents(\MT@pdf@annot)

```

```

126      }%
127      \iftracingmicrotypeinpdfall\kernlpt \fi
128      \global\MT@inannotfalse
129      \fi
130 }
131 {/debug}
132 {/package}
133 {/package|letterspace}

```

1.1.2 Visual debugging

The `microtype-show` package offers some tools for preparing protrusion settings. We make use of the `microtype` infrastructure, redefining some of its internal commands (done later, in sections 1.2.1 and 1.2.8). First, some preparation:

```

134 {*show}
135 \RequirePackage{iftex}
136 \ifetex\else
137   \PackageError{microtype-show}
138     {This package only works with e-TeX}\{Use e-TeX}
139 \fi
140 \ifxetex
141   \PackageError{microtype-show}
142     {This package only works with pdfTeX or LuaTeX}\{Don't use XeTeX}
143 \fi
144 \PackageWarning{microtype-show}{DO NOT USE THIS PACKAGE FOR REAL DOCUMENTS@\gobble}
145 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{microtype}}
146 \ProcessOptions\relax
147 \PassOptionsToPackage{verbose}{microtype}
148 \RequirePackage{microtype,graphicx,xcolor}

```

\ifShowGlyphIndex The following commands are configurable:

```

\ifShowMissingGlyphs 149 \newif\ifShowGlyphIndex
\GlyphScaleFactor    150 \newif\ifShowMissingGlyphs
>Showbaselinecolor  151 \newcommand*\GlyphScaleFactor[2]{%
  \Showbaselinecolor\color{black!40}}
\Showposcolor        152 \newcommand*\Showposcolor\color{green!50}%
\Shownegcolor        153 \newcommand*\Shownegcolor\color{red!50}%
\MTS@printtext      154 \newcommand*\Shownegcolor\color{red!50}%
\MTS@show@index     155 \ifluatex
\MTS@crulefill     156   \def\MTS@printtext#1{\usefont{TU}{lmr}{m}{n}\#1}
157 \else
158   \def\MTS@printtext#1{\usefont{T1}{cmr}{m}{n}\#1}
159 \fi
160 \def\MTS@show@index#1{\ifShowGlyphIndex{\tiny$_{\#1}$%
161 % \ifluatex^{\mathrm{%
162 % \MT@lua{tex.print(luaotfload.aux.name_of_slot(tonumber([[#1]]))}}}\fi
163 $}\fi\space}
164 \def\MTS@crulefill{\leaders\hrule height \dimexpr1ex/2+.4pt depth -\dimexpr1ex/2\hfill}

```

\MTS@Prot Add the show commands to `microtype`'s setup.

```

\MTS@Char 165 \g@addto@macro\MT@setupfont{\MTS@Prot\MTS@Char}
166 \let\MTS@Prot\relax
167 \let\MTS@Char\relax

```

\MTS@setup Common setup. \MTS@glyphlist stores all glyphs we've seen.

```

\MTS@glyphlist 168 \def\MTS@setup{%

1.1.3 Requirements

Back to the user packages.

\MT@plain The letterspace package works with:

- 0: miniltx
- 1: eplain
- 2: L^AT_EX

For plain usage, we have to copy some commands from `latex.ltx`.

```
352 (*package|letterspace)
353 (*plain)
354 \def\MT@plain{2}
355 \ifx\documentclass\undefined
356   \def\MT@plain{1}
357   \def\hmode@bgroup{\leavevmode\bgroup}
358   \def\nfss@text#1{{\mbox{#1}}}
359   \let\@typeset@protect\relax
360   \ifx\epplain\undefined
361     \def\MT@plain{0}
362     \def\PackageWarning#1#2{%
363       \begingroup
364         \newlinechar=10 %
365         \def\MessageBreak{^J(#1)\spaces\spaces\spaces\spaces}%
366         \immediate\write16{^JPackage #1 Warning: #2\on@line.^J}%
367       \endgroup
368     }
369     \def\on@line{ on input line \the\inputlineno}
370     \def\@spaces{\space\space\space\space}
371   \fi
372 }
```

\MT@requires@latex Better use groups than plain ifs.

```
373 \def\MT@requires@latex#1{%
374   \ifnum\MT@plain<#1 \expandafter\@secondoftwo\else\expandafter\@firstoftwo\fi
375 }
376 (plain)
```

For definitions that depend on e-TeX features.

```
377 \ifcase 0%
378   \ifx\TeXversion\undefined 1\else
379     \ifx\TeXversion\relax    1\else
380       \ifcase\TeXversion    1\fi

```

\MT@pdftex@no \pdfTeX 's features for which we provide an interface here haven't always been available, and some specifics have changed over time. Therefore, we have to test which \pdfTeX we're using, if any. \MT@pdftex@no will be used throughout the package to respectively do the right thing. Currently, we have to distinguish the following cases for \pdfTeX :

- 0: not running \pdfTeX
- 1: \pdfTeX ($< 0.14f$) (already checked above)
- 2: + micro-typographic extensions ($0.14f,g$)
- 3: + protrusion relative to 1em ($\geq 0.14h$)
- 4: + automatic font expansion; protrusion no longer has to be set up first; scale factor fixed to 1000; default $\text{\efcode} = 1000$ (≥ 1.20)
- 5: + $\text{\left, right} \text{\marginkern}; \text{\pdfnoligatures}; \text{\pdfstrcmp}; \text{\pdfescapestring}$ (≥ 1.30)
- 6: + adjustment of interword spacing; extra kerning; \letterspacefont ; \pdfmatch^1 ; \pdftracingfonts ; always \eTeX (≥ 1.40)
- 7: + \letterspacefont doesn't disable ligatures and kerns; \pdfcopyfont ($\geq 1.40.4$)
- 8: + \letterspacefont uses explicit $\text{\fontdimen} 6$ if specified ($\geq 1.40.23$)

¹ This command was actually introduced in 1.30, but failed on strings longer than 1023 bytes.

```

488 %\fi
489 (debug)%\MT@dinfo@n{0}{xetex no.: \MT@xetex@no}
490 (/xe-)

```

\MT@luatex@no Cases for LuaT_EX (\luatexversion ought to have been enabled by the format):

- 0: N/A
- 1: LuaT_EX (< 0.36)
- 2: + \directlua without state number (≥ 0.36)
- 3: + \letterspacefont; non-automatic expansion doesn't work anymore, and automatic expansion in DVI mode is realised by modifying the tracking, not the glyphs² (≥ 0.62)
- 4: + almost all of the pdfT_EX primitives have been renamed (≥ 0.85)
- 5: + default \efcode = 1000; \protrusionboundary [doesn't seem to work] (≥ 0.90)
- 6: + \glet(≥ 1.10)

Also, sometime between 1.0.4 and 1.0.7, the function font.setexpansion has been introduced (but we're not using it for now).

² This may have been changed earlier, but I'm no longer able to find out when (the last version that actually works for me is 0.40).

```

491 (*lua-)

592 (pdf-&debug)\MT@requires@pdftex6{
593 (debug)\pdftracingfonts=1
594 (pdf-&debug)\relax
595 (/pdf-|lua-)

```

Some functions are loaded from a dedicated `lua` file. This avoids character escaping problems and incompatibilities between versions of LuaTeX. Unless running a recent LaTeX, we load the `luatexbase` package.

```
596 (lua-)\IfFormatAtLeastTF{2016/01/01}\relax{\RequirePackage{luatexbase}}
```

We load `luatofload`, because some of its functions are required in `microtype.lua`. This eliminates the need for the user to load `fontspec` before `microtype`. There will hardly be any LaTeX documents that don't load this package, anyway. Since 2017/01/01, it is already loaded in the format.

```

597 (lua-)\IfFormatAtLeastTF{2017/01/01}\relax{\RequirePackage{luatofload}}
598 (letterspace)\MT@pdf@or@lua\relax{
599 (letterspace)\ifx\newluafunction@\undefined \input l luatex \fi
600 (lua-|letterspace)\MT@lua{require("microtype")}
601 (letterspace)}

```

Here it begins. The module was contributed by Élie Roux.

```

We need the function `math.tointeger`, which is missing in older LaTeX versions, and ConTeXt (inherited via `luatofload`) faultily overwrites its own definition. The

following is the (correct) definition from `l-math.lua`.

```

623 if not math.tointeger or not pcall(math.tointeger,0) then
624   math.mininteger=-0xxFFFFFFFFFFFF
625   math.maxinteger=0xxFFFFFFFFFFFF
626   local floor=math.floor
627   function math.tointeger(n)
628     local f=floor(n)
629     return f==n and f or nil
630   end
631 end
632
633 (/luafile)
```

To be continued, but first back to primitives.

`\MT@glet` Here's the forgotten one (finally implemented in `LuaTeX`).

1047     \expandafter\@gobble
1048   \fi
1049 }

```

1.1.6 Compatibility

For the record, the following L^AT_EX kernel commands will be modified by `microtype`:

- `\pickup@font`
- `\do@subst@correction`
- `\add@accent` (all in section 1.2.10)
- `\showhyphens` (in section 1.4.6)

The `wordcount` package redefines the font-switching commands, which will break `microtype`. Since `microtype` doesn’t have an effect on the number of words in the document anyway, we will simply disable ourselves.

```

1050 \@ifl@aded{tex}{wordcount}{%
1051   \MT@warning@nl{Detected the `wordcount' utility.\MessageBreak
1052   Disabling `\'\MT@MT', since it wouldn't work}%
1053   \MT@clear@options\endinput}relax

```

The `minimal` class doesn’t define any size commands other than `\normalsize`, which will result in lots of warnings. Therefore we issue a warning about the warnings.

```

1054 \@ifclassloaded{minimal}{%
1055   \MT@warning@nl{Detected the `minimal' class.\MessageBreak
1056   Expect lots of warnings and some malfunctions.\MessageBreak
1057   You might want to use a proper class instead}%
1058 }relax
1059 
```

\MT@setup@ The setup is deferred until the end of the preamble. This has a couple of advantages: \microtypesetup can be used to change options later on in the preamble, and fonts don't have to be set up before microtype.

```
1060 <*package|letterspace>
1061 <plain>\MT@requires@lateX1{
1062 \let\MT@setup@\empty

1073   }@\gobble
1074 }
1075 (/package)
```

\MT@ledmac@setup The `ledmac` package first saves each paragraph in a box, from which it then splits off the lines one by one. This will destroy character protrusion. (There aren't any problems with the `lineno` package, since it takes a different approach.) — . . . — After much to and fro, the situation has finally settled and there is a fix. Beginning with pdfTeX version 1.21b together with `ledpatch.sty` as of 2005/06/02 (v0.4), character protrusion will work at last.

Peter Wilson was so kind to provide the `\l@unhbox@line` hook in ledmac to allow for protrusion. `\leftmarginkern` and `\rightmarginkern` are new primitives of pdfTEX 1.21b (aka. 1.30.0). They are also part of recent X_ET_EX. The successor packages eledmac and reledmac are also supported.

```

```

\MT@setupfont@hook This hook will be executed every time a font is set up (inside a group).

In the preamble, we check for the packages each time a font is set up. Thus, it will work regardless when the packages are loaded.

Even for packages that don't activate any characters in the preamble (like `babel` and `csquotes`), we have to check here, too, in case they were loaded before `microtype`, and a font is loaded `\AtBeginDocument`, before `microtype`. (This is no longer needed, since the complete setup is now deferred until the end of the preamble. However, it is still necessary for `defersetup=false`.)

```
1161 \def\MT@setupfont@hook{%
```

Spanish (as well as Galician and Mexican) `babel` modify `\%`, storing the original meaning in `\percentsign`.

```

`footnote:` footnote text (only visible with block paragraphs)

- The new footnote code (in `latex-lab-footnotes.ltx`), which is meant to facilitate tagging, introduces many hooks, among them `fntext/begin`, which would seem appropriate for us. Unfortunately, however, we cannot use it, as we'd stumble over the hook management itself. I think it's unnecessary to patch the `exp3` version too, but I suppose it won't do any harm either. There's no new code for footnotes in minipages at the moment.

```

1429 \MT@define@patch{footnote}{%
1430   \@ifdefined@n@TF{fnote_footnotetext:n}%
1431   {\ExplSyntaxOn

```

- `changebar`

```

1468   {\@ifpackageloaded{changebar}
1469     { \MT@patch@patch@footnotetext{#1}\leftprotrusion#1}%
1470       \MT@patch@patch@footnotetext{#1\cb@end}\leftprotrusion#1\cb@end}%
1471       \MT@patch@patch@mpfootnotetext{#1}\leftprotrusion#1}%
1472       \MT@patch@patch@mpfootnotetext{#1\cb@end}\leftprotrusion#1\cb@end}%

```

- finally, the base classes

```

1473   { \MT@patch@patch@app@footnotetext\ignorespaces\leftprotrusion
1474     \MT@patch@patch@app@mpfootnotetext\ignorespaces\leftprotrusion}}}}}}}%
1475   }{}%

```

`verbatim`: disable all microtypographic extensions in `verbatim` blocks. (This could have been another nice opportunity to use the new L^AT_EX hook management, however, the hook here is executed too early – namely, before the `\par` in `\@verbatim`, which may result in spilling the microtypographic settings to the preceding paragraph – so we’re resorting to patching, again.)

- Appending to `\@verbatim` works for, at least, the standard classes, `verbatim` (and `memoir`); the implementations in `fancyrb` and `listings` don't allow protrusion anyway.

```
1476   \MT@define@patch{verbatim}{%
1477     \MT@append@patch{\@verbatim{\microtypesetup{activate=false}}}{%
1478       \MT@with@package@T{alltt}{\MT@append@patch{alltt}{\microtypesetup{activate=false}}}{%
1479     }{}}
```

- `package alltt`

Finally, execute any redefinitions.

```
1480   \MT@redefined@patches
1481   }
1482   (package)
```

1.2 Font setup

We need a font (the `minimal` class doesn't load one).

```
1483 (package)\expandafter\ifx\the\font\nullfont\normalfont\fi
\MT@setupfont      Setting up a font entails checking for each feature whether it should be applied to
                    the current font (\MT@font).
```

```
1484 (*pdf-|lua-|xe-)
1485 \def\MT@setupfont{%
  With XETEX and LuaTEX the font may not be actually loaded, hence we might see a
  wrong font (in \MT@get@slot). Therefore, we first load the current font.
```

```
1486 (xe-|lua-)\MT@font
  We might have to disable stuff when used together with adventurous packages.
```

```
1487 \MT@setupfont@hook
  This will use a copy of the font (allowing for expansion parameter variation and
  the use of more than one set of protrusion factors for a font within one paragraph).
```

```
1488 (pdf-)\MT@requires@pdftex7{%
1489 (pdf-|lua-)\g@addto@macro\MT@setupfont\MT@copy@font
1490 (pdf-)}\relax
```

The font properties must be extracted from `\MT@font`, since the current value of `\f@encoding` and friends may be wrong!

```
1491 \g@addto@macro\MT@setupfont{%
1492   \MT@exp@two@c\MT@split@name\string\MT@font/\@nil
```

Try to find a configuration file for the current font family.

```
1493 \MT@exp@one@n\MT@find@file\MT@family
1494 \ifx\MT@familyalias\empty\else
1495   \MT@exp@one@n\MT@find@file\MT@familyalias\fi
```

We have to make sure that `\cf@encoding` expands to the correct value (for later, in `\MT@get@slot`), which isn't the case when `\selectfont` chooses a new encoding (this would be done a second later in `\selectfont`, anyway – three lines, to be exact). (I think, I do not need this anymore – however, I'm too afraid to remove it. ... Oops, I did it. Let's see whether anybody complains.)

```
1496 % \ifx\f@encoding\cf@encoding\else\@enc@update\fi
1497 }
```

Tracking has to come first, since it means actually loading a different font.

```
1498 (pdf-)\MT@requires@pdftex6
1499 (lua-)\MT@requires@luatex3
```

```

1500 {pdf-|lua-} {
1501 {pdf-|lua-|xe-} \g@addto@macro\MT@setupfont\MT@tracking
1502 {pdf-|lua-}\relax
1503 \g@addto@macro\MT@setupfont{%
1504   \MT@check@font
1505   \ifMT@inlist@%
1506   {debug}\MT@show@pdfannot2%
1507   \else
1508     \MT@vinfo{Setting up font `"\MT@font'\on@line}%
1509     \MT@info@notracking

```

Now we can begin setting up the font for all features that the current pdfTeX provides. The following commands are \let to \relax if the respective feature is disabled via package options.

For versions older than 1.20, protrusion has to be set up first, beginning with 1.20, the order doesn't matter.

```

1510 \MT@protrusion
1511 {pdf-|lua-} \MT@expansion
1512 }

```

Interword spacing and kerning (pdfTeX 1.40).

```

1513 {*pdf-}
1514 \MT@requires@pdftex6{%
1515 \g@addto@macro\MT@setupfont{\MT@spacing\MT@kerning}%
1516 }\relax
1517 {/pdf-}

```

Disable ligatures (pdfTeX 1.30).

```

1518 {pdf-}\MT@requires@pdftex5{%
1519 {pdf-|lua-}\g@addto@macro\MT@setupfont\MT@noligatures
1520 {pdf-}}\relax
1521 \g@addto@macro\MT@setupfont{%

```

Debugging.

```

1522 {debug}\MT@show@pdfannot1%

```

Finally, register the font so that we don't set it up anew each time.

```

1523 \MT@register@font
1524 \fi
1525 }
1526 {/pdf-|lua-|xe-}

```

\MT@copy@font The new (1.40.4) \pdfcopyfont command allows expanding a font with different parameters, or to use more than one set of protrusion factors for a given font within one paragraph. It will be used when we find a context for \SetProtrusion or \SetExpansion in the preamble, or when the package has been loaded with the copyfonts option.

```

1527 {*pdf-|lua-}
1528 \let\MT@copy@font\relax
1529 {pdf-}\MT@requires@pdftex7{%
1530 \def\MT@copy@font@{%

```

```

Here’s the promised dirty trick for users of older pdfTeX versions, which works around the problem that the use of the same font with different expansion parameters is prohibited. If you do not want to create a clone of the font setup (this would require duplicating the `tfm/vf` files under a new name, and writing new `fd` files and `map` entries), you can load a minimally larger font for the paragraph in question. E.g., for a document typeset in 10 pt:

```

\SetExpansion
[ stretch = 30,
  shrink = 60,
  step   = 5 ]
{ encoding = *,
  size = 10.001 }
{
\newcommand{\expandpar}[1]{%
  \fontsize{10.001}{\baselineskip}\selectfont #1\par}
%
\expandpar{This paragraph contains an `unnecessary' widow.}

```

Note that the `\expandpar` command can only be applied to complete paragraphs. If you are using Computer Modern Roman, you have to load the `fix-cm` package to be able to select fonts in arbitrary sizes. Finally, the reason I suggest to use a larger font, and not a smaller one, is to prevent a different design size being selected.

`\MT@fix@fontdimen@six`
`\MT@dimen@six`

If `\fontdimen6` is zero, character protrusion, spacing, kerning and tracking won't work, and we could skip the settings (for example, the `dsfont` fonts don't specify this dimension; this is probably a bug – the `fourier` and `newpx/newtx` packages have been fixed in the meantime). However, we can fix it ourselves (and since `pdfTeX` 1.40.23, this also works for `\letterspacefont`). `XeTeX` (and newer `LuaTeX` in DVI mode) doesn't provide an equivalent to `\pdffontsize`, so we use the nominal size instead.

```

`\MT@scale@to@em` Since pdfTeX version 0.14h, we have to adjust the protrusion factors (i.e., convert numbers from thousandths of character width to thousandths of an em of the font). We have to do this *before* setting the inheriting characters, so that the latter inherit the absolute value, not the relative one if they have a differing width (e.g., the ‘ff’ ligature). Unlike `protcode.tex` and `pdfcprot`, we do not calculate with `\lpcode` resp. `\rancode`, since this would disallow protrusion factors larger than the character width (since `\[1r]pcode`’s limit is 1000). Now, the maximum protrusion is 1 em of the font.

The unit is in `\MT@count`, the desired factor in `\@tempb`, and the result will be returned in `\@tempcntb`.

```

```

\rightprotrusion \MT@prot@r Unfortunately, there's no way to retrieve anything that's already been typeset, so the counterpart cannot be defined symmetrically.

```

2124 \DeclareRobustCommand\rightprotrusion{\MT@prot@r}
2125 \def\MT@prot@r#1{%
2126   {#1}%
2127   \MT@get@prot{#1}{right}%
2128 }

```

\MT@get@prot Typeset the text inside a box and get the left and right margin kerns. We add an extra \vbox in case we're inside a tabular. \@newlistfalse is meant to make \\ work in centering etc. We set various penalties to zero to allow linebreaking, and don't bother if the split box is overfull (but shouldn't we? – after all, that's how the penalties bug was discovered ...). (We no longer reset counters etc., since we don't typeset whole arguments anymore.) Also, we begin a group to make it color-safe. Furthermore, we have a hook for compatibility fixes (currently used for csquotes only),

\MT@csq@eqgroup and a dedicated command to end csquotes's group (because we actually typeset the quote character, instead of disabling quotes altogether (as we suggested for [issue #1], which was wrong)). Compatibility with csquotes is also the reason for the extra \relax after {#1}.

\MT@noindent Finally, L^AT_EX's new paragraph hooks require special attention, as they're (currently?) unable to distinguish between real typesetting and trial runs. In our case, fortunately, we really don't want to trigger the hooks.⁶ Also, as far as I can tell, we don't need a \RawParEnd at the end (as suggested in \tpara), because none of our commands are \long anymore.

2299     \let\MT@prot@ifmacro@\gobble
2300     \expandafter\MT@tlist@break
2301   \fi
2302 }
```

Beware that the following nomenclature is rather arcane.

\MT@prot@check@I • This is for commands to be Ignored.

```
2303 \def\MT@prot@check@I{%
2304   \def\MT@temp*##1{\MT@prot@get@firstgroup}%
2305 }
```

\MT@prot@check@S • Add a Single command (without an argument).

```
2306 \def\MT@prot@check@S{%
2307   \def\MT@temp*##1{\MT@toks\expandafter{\the\MT@toks##1}\MT@prot@get@firstgroup}%
2308 }
```

\MT@prot@check@O • Add a command with One argument.

```
2309 \def\MT@prot@check@O{%
2310   \def\MT@temp*##1##2{\MT@toks\expandafter{\the\MT@toks##1##2}\MT@prot@get@firstgroup}%
2311 }
```

\MT@prot@check@o • The same with an optional argument.

```
2312 \def\MT@prot@check@o{%
2313   \def\MT@temp*##1{\@ifnextchar[{\MT@prot@check@o##1}{\MT@prot@check@o##1[]}}%
2314 }
```

The \color command, for which this is used, would stumble over an empty optional argument.

```
2315 \def\MT@prot@check@o##1[#2]##3{%
2316   \MT@ifempty{##2}{%
2317     {\MT@toks\expandafter{\the\MT@toks##1##3}}%
2318     {\MT@toks\expandafter{\the\MT@toks##1[#2]##3}}%
2319   \MT@prot@get@firstgroup
2320 }
```

\MT@prot@check@T • Add a command with Two arguments.

```
2321 \def\MT@prot@check@T{%
2322   \def\MT@temp*##1##2##3{\MT@toks\expandafter{\the\MT@toks##1##2##3}\MT@prot@get@firstgroup}%
2323 }
```

\MT@prot@check@E • This is for commands that Enclose their argument in something, e.g., in braces, and which we trial-typeset without any contents.

```
2324 \def\MT@prot@check@E{%
2325   \the\MT@toks
2326   \def\MT@temp*##1{\MT@prot@l##1}%
2327 }
```

\MT@prot@check@e • Same for starred commands (the main candidate here is csquotes's \enquote).

```
2328 \def\MT@prot@check@e{%
```

```

2329   \the\MT@toks
2330   \def\MT@temp*##1{\@ifstar{\MT@prot@l{##1*}}{\MT@prot@l{##1}}}{%
2331 }

```

- \MT@prot@check@eX • Here we replace the ‘integrated interface’ (`csquotes`) with the regular one.

```

2332 \def\MT@prot@check@eX#1{%
2333   \the\MT@toks
2334   \def\MT@temp*##1{\@ifstar{%
2335     {\MT@get@prot{#1*}{left}##1*}
2336     {\MT@get@prot{#1}{left}##1}}{%
2337 }

```

- \MT@prot@check@1 • `csquotes` provides a couple of commands for quotations in foreign languages (lowercase, because it may be starred), whose first argument (the language) we also have to evaluate before trial typesetting.

```

2338 \def\MT@prot@check@1{%
2339   \def\MT@temp*##1{\@ifstar{\MT@prot@check@1@{##1*}}{\MT@prot@check@1@{##1}}}{%
2340 }
2341 \def\MT@prot@check@1@#1#2{%
2342   \the\MT@toks
2343   \MT@prot@l{#1{#2}}{%
2344 }

```

- \MT@prot@check@1X • Another macro for `csquotes` commands: replace integrated language-switching commands with their regular variants.

```

2345 \def\MT@prot@check@1X#1{%
2346   \def\MT@temp*##1{\@ifstar{%
2347     {\def\MT@temp{##1}\MT@prot@check@1X@{##1*}}
2348     {\def\MT@temp{##1}\MT@prot@check@1X@{##1}}}{%
2349 }
2350 \def\MT@prot@check@1X@#1#2{%
2351   \the\MT@toks
2352   \MT@get@prot{#1{#2}}{left}\MT@temp{#2}{%
2353 }

```

- \MT@prot@check@F • Here we deal with Font switching commands (i.e., text commands, which take an argument). We (a) remember the text command, (b) save the full text, and then (c) continue inspecting the contents of the argument. We also have to execute (and empty) `\MT@toks`, because it might already contain other commands. Nested text commands still don’t work.

```

2354 \def\MT@prot@check@F{%

1.2.3 Expansion

`\MT@expansion` Set up for expansion?

```

2487 (*pdf-|lua-)
2488 \def\MT@expansion{\MT@maybe@do{ex}}

```

`\MT@set@ex@codes@s` Setting up font expansion is a bit different because of the selected option. There are two versions of this macro.

If `selected=true`, we only apply font expansion to those fonts for which a list has been declared (i.e., like for protrusion).

```

2489 \def\MT@set@ex@codes@s{%
2490   \MT@if@list@exists{%
2491     \MT@get@ex@opt
2492     \let\MT@get@char@unit\relax
2493     \MT@reset@ef@codes
2494     \MT@get@inh@list
2495     \MT@set@inputenc{c}%
2496     \MT@load@list\MT@ex@c@name
2497     \MT@set@listname
2498     \MT@let@cn\@tempc{\MT@ex@c@\MT@ex@c@name}%

            Only \textls can be used in math mode (\lsstyle may be used inside another
            text switch, of course). Still, we have to ensure that math fonts are set up again.
            Setting \glb@currsize globally to \@empty (our previous solution) could throw us
            into an infinite loop (e.g., with the psnfss packages, via \every@math@size), so
            we issue \glb@settings instead. However, in certain situations, we may still miss
            some math fonts, so let's try to also enforce it by emptying \glb@currsize, fingers
            crossed. The overhead seems small.
3055 \DeclareRobustCommand\lsstyle{%
3056     \not@math@alphabet\lsstyle\textls
3057     \let\glb@currsize\@empty

1.2.7 Disabling ligatures

\MT@noligatures The possibility to disable ligatures is a new features of pdfTeX 1.30, and also works with LuaTeX.

```

3376 (*pdf-|lua-)
3377 (pdf-)\MT@requires@pdftex5{
3378 \def\MT@noligatures{%
3379   \MT@dotrue
3380   \let{@tempa\MT@n}@setname
3381   \def\MT@feat{n1}%
3382   \MT@map@clist@n{font,encoding,family,series,shape,size}{%
3383     \MT@ifdefined@n@TF{\MT@checklist@##1}%
3384     {\csname MT@checklist@##1\endcsname}%
3385     {\MT@checklist@{##1}}%
3386   {n1}}%
3387 }%
3388 \ifMT@do
3389   \MT@noligatures@\MT@font\MT@n@ligatures
3390 \fi
3391 }

```

\MT@noligatures@ This is also used by \MT@set@tr@codes.

```

3392 (lua-)\MT@requires@luatex4{\let\pdfnoligatures\ignoreligaturesinfont}\relax
3393 \def\MT@noligatures@#1#2{%
3394   \MT@ifdefined@c@TF#2{%

```

```

\MT@cfg@catcodes We have to make sure that all characters have the correct category code. Especially, new lines and spaces should be ignored, since files might be loaded in the middle of the document. This is basically \nfss@catcodes (from the L^AT_EX kernel). I've added: & (in tabulars), !, ?, ;, : (french), ,, \$, -, ~, and = (Turkish babel).

OK, now all printable characters up to 127 are 'other'. We hope that letters are always letters and numbers other. (*listings* makes them active, see section 1.1.6.)

We leave ^ at catcode 7, so that stuff like '^ff' remains possible.

```

3529 \def\MT@cfg@catcodes{%
3530   \makeatletter
3531   \catcode`^7%
3532   \catcode`\ 9%
3533   \catcode`^I9%
3534   \catcode`^M9%
3535   \catcode`\\z@
3536   \catcode`{\@ne
3537   \catcode`}`tw@
3538   \catcode`#6%
3539   \catcode`%14%
3540   \MT@map@list@{!\"$&`(\`*\`+,`-`.\`/\`:\`<`=\`>`?`[\`]\`-\`/\`~}%
3541   \MT@map@list@{`!\`$\`&`(``*\`+,`-`.\`/\`:\`<`=\`>`?`[\`]\`-\`/\`~}%
3542   \makeatother
3543 }
```

\MT@begin@catcodes This will be used before reading the files as well as in all configuration commands, so that catcodes are also harmless when these commands are used outside the configuration files.

```

3544 \def\MT@begin@catcodes{%
3545   \begingroup

3547 }
```

\MT@end@catcodes End group if outside configuration file (otherwise relax).

```
3548 \let\MT@end@catcodes\endgroup
```

\MT@get@basefamily The family name might have a suffix e.g., for expert set (x), old style numbers (j) swash capitals (w) etc. We mustn't simply remove the last letter, as this would make

Table 1:

Order for matching font attributes

	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	12.	13.	14.	15.	16.
Encoding	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•
Family	•	•	•	•	•	•	•	•	-	-	-	-	-	-	-	-
Series	•	•	•	•	-	-	-	-	•	•	•	•	-	-	-	-
Shape	•	•	-	-	•	•	-	-	•	•	-	-	•	•	-	-
Size	•	-	•	-	•	-	•	-	•	-	•	-	•	-	•	-

for instance `cms` out of `cmss` and `cmsy` (OK, `cmex` will still become `cme` ...).

We only work on the font name if it is longer than three characters.

```
3549 \def\MT@get@basefamily#1#2#3#4@nil{%
3550   \ifx@\empty#4%
3551     \def\@tempa{#1#2#3}%
3552   \else
3553     \let\@tempa\@empty
3554     \edef\@tempb{#1#2#3#4}%
3555     \expandafter\MT@get@basefamily@\@tempb@nil
3556   \fi
3557 }
```

`\MT@get@basefamily@` This will only remove one suffix (the longest match), so that *combinations* of suffixes would have to be added manually (e.g., `\DeclareMicrotypeVariants*{aw}`). But otherwise, something like ‘`pplx`’ would be truncated to ‘`p`’.

```
3558 \def\MT@get@basefamily@#1#2@nil{%
3559   \edef\@tempa{\@tempa#1}%
3560   \ifx\@#2\\ \expandafter\@gobble\else\expandafter\@firstofone\fi
3561   {\MT@in@list{#2}\MT@variants
3562   \ifMT@inlist@\else\MT@get@basefamily@#2@nil\fi}%
3563 }
```

`\MT@listname` Try all combinations of font family, series, shape and size to get a list for the current font.

```
\MT@get@listname@ 3564 \def\MT@get@listname#1{%
3565   debug\MT@dinfo@n{1}{trying to find \nameuse{MT@abbr@#1} list for font `\\MT@@font'}%

3665 }

```

1.2.9 Translating characters into slots

Get the slot number of the character in the current encoding.

\MT@get@slot There are lots of possibilities how a character may be specified in the configuration files, which makes translating them into slot numbers quite expensive. Also, we want to have this as robust as possible, so that the user does not have to solve a sphinx's riddle if anything goes wrong.

\MT@char The character is in \\@tempa, we want its slot number in \\MT@char.

```

\MT@char@ 3666 \\def\\MT@get@slot{%
3667   \\escapechar`\\
3668   \\let\\MT@char@\\m@ne
3669   \\MT@noresttrue

```

Save unexpanded string in case we need to issue a warning message.

```

3670   \\MT@toks=\\expandafter{\\@tempa}%

```

It might be an active character, i.e., an 8-bit character defined by \\inputenc. If so, we will expand it here to its LICR form.

```

3671   \\MT@exp@two@c\\MT@is@active\\string\\@tempa\\@nil

```

Now, let's walk through (hopefully) all possible cases.

- It's a letter, a character or a number.

```

3672   \\expandafter\\MT@is@letter\\@tempa\\relax\\relax
3673   \\ifnum\\MT@char@ < \\z@

```

- OK, so it must be a macro. We do not allow random commands but only those defined in L^AT_EX's idiosyncratic font encoding scheme:

If $\langle encoding \rangle \langle command \rangle$ (that's *one* command) is defined, we try to extract the slot number.

We must be cautious not to stumble over accented characters consisting of two commands, like $\backslash ' \backslash i$ or $\backslash U \backslash CYRI$, hence, $\backslash string$ wouldn't be safe enough.

```
3674     \MT@ifdefined@n@TF{\MT@encoding\MT@detokenize@c\@tempa}%
3675         \MT@is@symbol
```

- Now, we'll catch the rest, which hopefully is an accented character (e.g. $\backslash "a$).

```
3676     {\expandafter\MT@is@composite@\@tempa\relax\relax}%
3677     \ifnum\MT@char@ < \z@
```

- It could also be a $\backslash chardef$ command (e.g., the percent character). This seems the least likely case, so it's last.

This is the lua function to translate glyph name into slot number. Beginning with v2.2, luatfload provides this function in its API, which we use if available, but (for now, at least) keep the old code for backward compatibility. With HarfBuzz, the return value is not guaranteed to be inside the Unicode range, so we have to guard

⁷ This doesn’t seem to be documented anywhere, but it has been announced here: <https://tug.org/pipermail/xetex/2010-May/016531.html>

against this case as well (same as in do_font). Also, older versions of luatofload (until v3.18) returned the numbers as floats.

```

\MT@is@active Expand an active character. (This was completely broken in v1.7, and only worked by chance before.) We \set@display@protect to translate, e.g., Ä into \"A, that is to whatever it is defined in the inputenc encoding file.

Unfortunately, the (older) inputenc definitions prefer the protected/generic variants (e.g., \copyright instead of \textcopyright), which our parser won't be able to understand. (I'm fed up now, so you have to complain if you really, really want to be able to write '©' instead of \textcopyright, thus rendering your configuration files unportable.)

Unicode characters (inputenc/utf8,utf8x) are also supported.

```

\MT@is@composite Here, we are dealing with accented characters, specified as two tokens.

```

3985 \def\MT@is@composite#1#2\relax{%
3986     \ifx\\#2\\else

```

Again, we construct a control sequence, this time of the form: `\encoding\accent{-character}`, e.g., `\T1\"-a`, which we then expand once to see if it is a letter (if it has been defined by `\DeclareTextComposite`). This should be robust, finally, especially, since we also `\detokenize` the input instead of only `\stringify`ing it. Thus, we will die gracefully even on wrong Unicode input without utf8.

```

3987     \expandafter\def\expandafter\MT@char\expandafter{\csname\expandafter
3988         \string\csname\MT@encoding\endcsname
3989         \MT@detokenize@n{#1}-\MT@detokenize@n{#2}\endcsname}%

```

In 2017, L^AT_EX introduced a new way of declaring accented Unicode commands (`\DeclareUnicodeComposite`), which we take care of here (`\UnicodeEncodingName` has been introduced at the same time):

```

3990     \ifx\UnicodeEncodingName@undefined\else
3991         \expandafter\expandafter\expandafter

```

```

3992      \MT@is@uni@comp\MT@char\iffontchar\else\fi\relax
3993  \fi
3994  \expandafter\expandafter\expandafter\MT@is@letter\MT@char\relax\relax

```

Again, xunicode.

```

3995  \ifnum\MT@char@ < \z@
3996  \ifMT@xunicode
3997    \edef\MT@char{\MT@exp@two@c\MT@strip@prefix\meaning\MT@char}\relax%

4000  \fi
4001  \fi
4002  \fi
4003 }

```

\MT@is@uni@comp Helper for \DeclareUnicodeComposite.

```

4004 \def\MT@is@uni@comp#1\iffontchar#2\else#3\fi\relax{%
4005   \ifx\#1\\ \edef\MT@char{\iffontchar#2\fi}\fi
4006 }

```

[What about math? Well, for a moment the following looked like a solution, with \mt@is@mathchar defined accordingly, analogous to \MT@is@char above, to pick up the last two tokens (the \meaning of a \mathchardef'd command expands to its hexadecimal notation):

```

\def\MT@is@mathchar#1{%
  \if\relax\noexpand#1% it's a macro
    \let\x#1%
  \else % it's a character
    \mathchardef\x=\mathcode`#1\relax
  \fi
  \expandafter\MT@exp@two@c\expandafter\mt@is@mathchar\expandafter
    \meaning\expandafter\x\mt@mathcharstring\relax\relax\relax
}

```

However, the problem is that \mathcodes and \mathchardef's have global scope. Therefore, if they are changed by a package that loads different math fonts, there is no guarantee whatsoever that things will still be correct (e.g., the minus in cmsy when the euler package is loaded). So, no way to go, unfortunately.]

Some warning messages, for performance reasons separated here.

The type and name of the current list, defined at various places.

```

\MT@set@listname 4007 \def\MT@set@listname{%

4041 }
```

1.2.10 Hook into L^AT_EX's font selection

We append \MT@setupfont to \pickup@font, which is called by L^AT_EX every time a font is selected. We then check whether we've already seen this font, and if not, set it up for micro-typography. This ensures that we will catch all fonts, and that we will not set up fonts more than once. The whole package really hangs on this command.

In contrast to the pdfcprot package, it is not necessary to declare in advance which fonts should benefit from micro-typographic treatment. Also, only those fonts that are actually being used will be set up.

For my reference:

- \pickup@font is called by \selectfont, \wrong@fontshape, or \getanddefine@fonts (for math).
- \pickup@font calls \define@newfont.
- \define@newfont may call (inside a group!)
 - \wrong@fontshape, which in turn will call \pickup@font, and thus \define@newfont again, or
 - \extract@font.
- \get@external@font is called by \extract@font, by itself, and by the substitution macros.

Up to version 1.3 of this package, we were using \define@newfont as the hook, which is only called for *new* fonts, and therefore seemed the natural choice. However, this meant that we had to take special care to catch all fonts: we additionally had to set up the default font, the error font (if it wasn't the default font), we had to check for some packages that might have been loaded before microtype and were loading fonts, e.g., jurabib, ledmac, pifont (loaded by hyperref), tipa, and

probably many more. Furthermore, we had to include a hack for the `IEEEtran` class which loads all fonts in the class file itself (to fine tune inter-word spacing), and the `memoir` class, too. To cut this short: it seemed to get out of hand, and I decided that it would be better to use `\pickup@font` and decide for ourselves whether we've already seen that font. I hope the overhead isn't too large.

`\MT@font@list`

```
4042 \let\MT@font@list@\empty
4043 \let\MT@font@\empty
```

All this is done at the beginning of the document. It doesn't work for plain, of course, which doesn't have `\pickup@font`.

```
4044 (/package)
4045 (*package|letterspace)
4046 (plain)\MT@requires@latex2{
4047 \MT@addto@setup{
```

`\MT@orig@pickupfont`

The `luatexja` package redefines `\char`, which will upset our parsing of text symbols and commands; instead of fixing this, we won't bother, at least for the moment, but simply issue a warning and disable all further warnings. The fix is left to the user by not specifying any text commands but only (Unicode) letters. The `xeCJK` package, or rather its `xunicode-addon`, also modifies the way text symbols are defined (like `luatexja` but in a different way). Again, we only issue a warning.

```
4048 (package) \MT@with@package@T{luatexja} {\MT@warn@unknown@once{luatexja}}%
4049 (package) \MT@with@package@T{xeCJK} {\MT@warn@unknown@once{xeCJK}}%
```

`microtype` also works with CJK in the sense that nothing will break when both packages are used at the same time. However, since CJK has its own way of encoding, it is currently not possible to create character-specific settings. That is, the only feature available with CJK fonts is (non-selected) expansion. (Tracking doesn't really work for other reasons.) Like us, CJK redefines `\pickup@font`.

```
4050 \@ifpackageloaded{CJK} {%
```

The `xeCJK` package in turn pretends that CJK was loaded, but does not change the definition of `\pickup@font`. With `xeCJK`, protrusion should be possible also for C/J/K characters; I haven't tried it, though.

```
4051 \@ifpackageloaded{xeCJK}{\@firstofone}{%
4052   \@ifpackagelater{CJK}{2006/10/17}{ 4.7.0
4053     {\def\MT@orig@pickupfont{\CJK@ifundefined{CJK@plane}}}{%

4110 (letterspace) \MT@tracking

```

8 Cf. <https://tex.stackexchange.com/q/687763/7674>

```

4111      \endgroup
4112  }%
4113 (*package)

\MT@pickupfont Remember the patched command, because we may have to disable ourselves in
\MT@MT@pickupfont certain situations.

\MT@ltx@pickupfont 4114 \let\MT@pickupfont\pickup@font
4115 \def\MT@MT@pickupfont {\let\pickup@font\MT@pickupfont}%
4116 \def\MT@ltx@pickupfont{\let\pickup@font\MT@orig@pickupfont}%

\do@subst@correction Additionally, we hook into \do@subst@correction, which is called if a substitution
has taken place, to record the name of the ersatz font. Unfortunately, this will only
work for one-level substitutions. We have to remember the substitute for the rest of
the document, not just for the first time it is called, since we need it every time a
font is letterspaced.

4117 \g@addtomacro\do@subst@correction
4118 {\edef\MT@font{\csname curr@fontshape/f@size\endcsname}%
4119 \MT@glet{nc}{\MT@subst@\expandafter\string\font@name}\MT@font}%

\add@accent Inside \add@accent, we have to disable microtype's setup, since the grouping in
\MT@orig@add@accent the patched \pickup@font would break the accent if different fonts are used for
the base character and the accent. Fortunately, LATEX takes care that the fonts used
for the \accent are already set up, so that we cannot be overlooking them.

4120 \let\MT@orig@add@accent\add@accent

```

1.2.11 Context-sensitive setup

Here are the variants for context-sensitive setup.

\MT@active@features The activated features are stored in a command. We always allow contexts for
tracking, because \textls may be used without activating the feature.

```

4141 (*pdf-|lua-|xe-)
4142 (pdf-)\MT@requires@pdftex6
4143 (lua-)\MT@requires@luatex3
4144 (pdf-|lua-){%
4145   \def\MT@active@features{,tr}%
4146 (pdf-|lua-)}{\let\MT@active@features\empty}
4147 (/pdf-|lua-|xe-)

```

\MT@check@font@cx Every feature has its own list of fonts that have already been dealt with. If the font needn't be set up for a feature, we temporarily disable the corresponding setup command. This should be more efficient than book-keeping the fonts in lists associated with the combination of contexts, as we've done it before.

```

4148 (*package)
4149 \def\MT@check@font@cx{%
4150   \MT@if@true
4151   \MT@map@clist@c\MT@active@features{%
4152     \expandafter\MT@exp@one@n\expandafter\MT@in@clist\expandafter\MT@font
4153     \csname MT@\#1@\csname MT@\#1@context\endcsname font@list\endcsname
4154   }\ifMT@inlist@%
4155   \MT@let@nc\MT@\@nameuse{MT@abbr@\#1}\relax
4156   \else
4157     \MT@if@false
4158   \fi
4159 }%
4160 \ifMT@if@ \MT@inlist@true \else \MT@inlist@false \fi
4161 }

```

\MT@register@subst@font@cx Add the substituted font to each feature list and possibly remove substitute font.

```

4162 \def\MT@register@subst@font@cx{%
4163   \MT@map@clist@c\MT@active@features{%
4164     \expandafter\MT@exp@one@n\expandafter\MT@in@clist\expandafter\font@name
4165     \csname MT@\#1@\csname MT@\#1@context\endcsname font@list\endcsname
4166   }\ifMT@inlist@ \else
4167     \MT@exp@cs\MT@xadd
4168     {MT@\#1@\csname MT@\#1@context\endcsname font@list}%
4169     {\font@name,}%
4170     \expandafter\MT@exp@one@n\expandafter\MT@rem@from@clist\expandafter\MT@font
4171     \csname MT@\#1@\csname MT@\#1@context\endcsname font@list\endcsname
4172   \fi
4173 }%
4174 }

```

\MT@register@font@cx For each feature, add the current font to the list, unless we didn't set it up.

```

4175 \def\MT@register@font@cx{%
4176   \MT@map@clist@c\MT@active@features{%
4177     \MT@exp@cs\ifx\MT@\@nameuse{MT@abbr@\#1}\relax\else
4178       \MT@exp@cs\MT@xadd
4179       {MT@\#1@\csname MT@\#1@context\endcsname font@list}%
4180       {\MT@font,}%
4181       \def@\tempa{\#1}%
4182       \MT@exp@cs\MT@map@tlist@c{MT@\#1@doc@contexts}\MT@maybe@rem@from@list
4183     \fi
4184   }%
4185 }

```

\MT@maybe@rem@from@list Recurse through all context font lists of the document and remove the font, unless it's the current context.

```

4186 \def\MT@maybe@rem@from@list#1{%
4187   \MT@ifstreq{\@tempa/\#1}{\@tempa/\csname MT@\@tempa @context\endcsname}\relax{%
4188     \expandafter\MT@exp@one@n\expandafter\MT@rem@from@clist\expandafter

4190   }%
4191 }

```

\microtypecontext
\MT@microtypecontext

The user may change the context, so that different setups are possible. This is especially useful for multi-lingual documents.

Inside the preamble, this command shouldn't actually do anything but remember itself for later.

```
4192 \DeclareRobustCommand\microtypecontext{\MT@begin@catcodes\MT@microtypecontext}
4193 \def\MT@microtypecontext#1{\MT@end@catcodes\MT@addto@setup{\microtypecontext{#1}}}
4194 \MT@addto@setup{%
4195   \DeclareRobustCommand\microtypecontext{%
4196     \MT@begin@catcodes
4197     \MT@microtypecontext
4198   }%
4199   \def\MT@microtypecontext#1{%
4200     \MT@end@catcodes
4201     \MT@setup@contexts
4202     \let\MT@reset@context\relax
```

We need to ensure that math fonts are set up anew.

```
4203   \MT@glet\glb@currsize\empty
4204   \setkeys{MTC}{#1}%
4205   \selectfont
4206   \MT@reset@context
4207 }%
4208 }
```

\textmicrotypecontext This is just a wrapper around \microtypecontext.
\MT@textmicrotypecontext 4209 \DeclareRobustCommand\textmicrotypecontext{\MT@begin@catcodes\MT@textmicrotypecontext}
\MT@text@microtypecontext 4210 \def\MT@textmicrotypecontext#1{\MT@end@catcodes\MT@text@microtypecontext{#1}}
4211 \def\MT@text@microtypecontext#1#2{\microtypecontext{#1}\#2}

\MT@reset@context We have to reset the font at the end of the group, provided there actually was a change.

```
4212 \def\MT@reset@context@{%
4213   \MT@vinfo{<<< Resetting contexts\on@line
4214   (debug) \MessageBreak= \MT@pr@context/\MT@ex@context
4215   (debug)           / \MT@tr@context/\MT@kn@context/\MT@sp@context
4216   }%
4217   \selectfont
4218 }
```

\MT@setup@contexts The first time \microtypecontext is called, we initialise the context lists and redefine the commands used in \pickup@font.

```
4219 \def\MT@setup@contexts{%
4220   \MT@map@clist@c\MT@active@features
4221   { \MT@glet@nc{\MT@##1@font@list}\MT@font@list }%
4222   \MT@glet\MT@check@font\MT@check@font@cx
4223   \MT@glet\MT@register@font\MT@register@font@cx
4224   \MT@glet\MT@register@subst@font\MT@register@subst@font@cx
4225   \MT@glet\MT@setup@contexts\relax
4226 }
```

Define context keys.

```
4227 \MT@map@clist@c\MT@features@long{%
4228   \define@key{MTC}{#1}{}{%
4229     \edef\@tempb{\nameuse{MT@rbba@#1}}%
4230     \MT@exp@one@n\MT@in@clist\@tempb\MT@active@features
4231     \ifMT@inlist@
```

Using an empty context is only asking for trouble, therefore we choose the '@ instead (hoping for the L^AT_EX users' natural awe of this character).

```
4232   \MT@ifempty{#1}{\def\MT@val@{}{\def\MT@val{##1}}%
4233   \MT@exp@cs\ifx\MT@\@tempb @context\MT@val
4234   (debug)\MT@dinfo{1}{>> no change of #1 context: ` \MT@val '}%
4235   \else
```

```

4236      \MT@vinfo{>>> Changing #1 context to `'\MT@val'\MessageBreak\on@line
4237  (debug)          \space(previous: `@\nameuse{\MT@#1tempb @context}')%
4238  }%
4239  \def\MT@reset@context{\aftergroup\MT@reset@context@}%

```

The next time we see the font, we have to reset *all* factors.

```
4240  \MT@glet@nn{\MT@reset@#1tempb @codes}{\MT@reset@#1tempb @codes@}%
```

We must also keep track of all contexts in the document.

```

1.3 Configuration

1.3.1 Font sets

```

\MT@kn@doc@contexts
\DeclareMicrotypeSet
\MT@extra@context
\DeclareMicrotypeSet

```

Calling this macro will create a comma list for every font attribute of the form: `\MT<feature>list@<attribute>@<set name>`. If the optional argument is empty, lists for all available features will be created.

The third argument must be a list of key=value pairs. If a font attribute is not specified, we define the corresponding list to \relax, so that it does not constitute a constraint.

```

4261 \def\DeclareMicrotypeSet{%
4262   \MT@begin@catcodes

```

Font sizes may also be specified as ranges. This has been requested by Andreas Bühmann, who has also offered valuable help in implementing this. Now, it is for instance possible to set up different lists for fonts with optical sizes. (The MinionPro project does this for the OpenType version of Adobe's Minion. (Available from CTAN at [pkg/minionpro](#)))

\MT@get@range Ranges will be stored as triplets of {*lower bound*} {*upper bound*} {*list name*}.

\MT@upper For simple sizes, the upper boundary is -1 .

```

4574   \xdef\@tempb{\@tempb}%

```

If we encounter this command while a font is being set up, we also set the alias for the current font so that if `\DeclareMicrotypeAlias` has been issued inside a configuration file, the configuration file for the alias font will be loaded, too.

```

4575 \ifdefined\@tempb{%
4576   \MT@info{Activating alias font `@\tempb' for `@\family'}%
4577   \glet\@tempb\@tempb
4578 }%
4579 \end@catcodes
4580 }

```

1.3.3 Configuration file management

`\LoadMicrotypeFile` May be used to load a configuration file manually.

```

4581 \def\LoadMicrotypeFile#1{%
4582   \edef\@tempa{\zap@space#1 \empty}%
4583   \onelevel@sanitize\@tempa
4584   \exp@one@{\in@list{\@tempa\MT@file@list}}%
4585   \ifmt@in@list@{%
4586     \vinfo{... Configuration file \cfg@prefix-\@tempa.cfg already loaded}%
4587   }%
4588   \xadd\@tempa{,}%
4589   \begin@catcodes
4590   \InputIfFileExists{\cfg@prefix-\@tempa}{%
4591     \edef\MT@curr@file{\cfg@prefix-\@tempa}%
4592     \vinfo{... Loading configuration file \curr@file}%
4593   }{%
4594     \warning{Configuration file \cfg@prefix-\@tempa.cfg\MessageBreak
4595       does not exist}%
4596   }%
4597   \end@catcodes
4598 }%
4599 }

```

`\MT@cfg@prefix` The configuration files' prefix may be customised.

```

\DeclareMicrotypeFilePrefix 4600 \def\MT@cfg@prefix{mt}
4601 \def\DeclareMicrotypeFilePrefix#1{%
4602   \def\MT@cfg@prefix{\#1}%
4603 }
4604 
```

1.3.4 Disabling ligatures

`\DisableLigatures` This is really simple now: we can re-use the set definitions of `\DeclareMicrotypeSet`; there can only be one set, which we'll call 'no ligatures'.

The optional argument may be used to disable selected ligatures only.

```

\MT@nl@ligatures 4605 (*pdf-|lua-)
4606 
```

```

4607 \def\DisableLigatures{%
4608   \MT@begin@catcodes
4609   \MT@DisableLigatures
4610 }
4611 \newcommand*\MT@DisableLigatures[2] [] {%
4612   \MT@ifempty{\#1}\relax{\gdef\MT@n@ligatures{\#1}}%

4641   }%
4642   \MT@end@catcodes
4643 }

```

1.3.6 Fine tuning

The commands \SetExpansion and \SetProtrusion provide an interface for setting the character protrusion resp. expansion factors for a set of fonts.

\SetProtrusion This macro accepts three arguments: [options,] set of font attributes and list of character protrusion factors.

A new macro called \MT@pr@c@*(name)* will be defined to be *(#3)* (i.e., the list of characters, not expanded).

```

4644 \def\SetProtrusion{%
4645   \MT@begin@catcodes
4646   \MT@SetProtrusion
4647 }

```

\MT@SetProtrusion We want the catcodes to be correct even if this is called in the preamble.

```
\MT@pr@c@name 4648 \newcommand*\MT@SetProtrusion[3] [] {%
```

```
\MT@extra@context 4649 \let\MT@extra@context@empty
```

```
\MT@permute@list
```

Parse the optional first argument. We first have to know the name before we can deal with the extra options.

```
4650 \MT@set@named@keys{MT@pr@c}{#1}%
4651 (debug)\MT@dinfo{1}{creating protrusion list `\\MT@pr@c@name'}%
4652 \def\MT@permute@list{pr@c}%
4653 \setkeys{MT@cfg}{#2}%
```

We have parsed the second argument, and can now define macros for all permutations of the font attributes to point to `\MT@pr@c@<name>`, ...

```
4654 \MT@permute
```

... which we can now define to be (#3). Here, as elsewhere, we have to make the definitions global, since they will occur inside a group.

```
4655 \MT@gdef@n{MT@pr@c@\\MT@pr@c@name}{#3}%
4656 \MT@end@catcodes
4657 }
4658 (/package)

4857   \fi
4858 }%
4859 }

```

Protrusion contexts *might* also work without copying the font, so we don't issue an error but only a warning. The problem is that pdfTeX only allows one set of protrusion factors for a given font within one paragraph (those that are in effect at the end of the paragraph will be in effect for the whole paragraph). When different fonts are loaded – like in the example with the footnote markers – we don't need to copy the fonts.

1.3.7 Character inheritance

`\DeclareCharacterInheritance`

This macro may be used in the configuration files to declare characters that should inherit protrusion resp. expansion values from other characters. Thus, there is no need to define all accented characters (e.g., `\'a`, `\^a`, `\~a`, `\"a`, `\r{a}`, `\k{a}`, `\u{a}`), which will make the configuration files look much nicer and easier to maintain. If a single character of an inheritance list should have a different value, one can simply override it.

`\MT@inh@feat` The optional argument may be used to restrict the list to some features, and to specify an input encoding.

```

4978 (*package)
4979 \renewcommand*\DeclareCharacterInheritance[1][]{%
4980   \let\MT@extra@context\empty
4981   \let\MT@extra@inputenc\undefined
4982   \let\MT@inh@feat\empty
4983   \setkeys{MT@inh@}{#1}%
4984   \MT@begin@catcodes
4985   \MT@set@inh@list
4986 }

```

`\MT@set@inh@list` No need to create an inheritance list for tracking.

```

4987 \def\MT@set@inh@list#1#2{%
4988   \MT@ifempty{\MT@inh@feat}{%
4989     \MT@map@clist@c{\MT@features{\begingroup
4990       \MT@ifstreq{##1}{tr}\relax{\MT@declare@char@inh{##1}{##1}{##2}}%
4991     \endgroup}%
4992   }{%
4993     \MT@map@clist@c{\MT@inh@feat{\begingroup

```

4998           \MT@exp@one@n\MT@declare@char@inh{\@tempa}{#1}{#2}}}}%
4999   \endgroup}%
5000 }%
5001 \MT@end@catcodes
5002 }

```

The keys for the optional argument.

```

5003 \MT@map@clist@c\MT@features@long{%
5004   \define@key{MT@inh@}{#1}[] {\edef\MT@inh@feat{\MT@inh@feat#1,}}}
5005 \define@key{MT@inh@}{inputenc} {\def\MT@extra@inputenc{#1}}

```

\MT@declare@char@inh The lists cannot be given a name by the user.

```

5006 \def\MT@declare@char@inh#1#2#3{%
5007   \MT@edef@n{MT@#1@inh@name}{%
5008     {\MT@curr@file/\the\inputlineno (\@nameuse{MT@abbr@#1})}}%
5009   \MT@let@cn\MT@curr@set@name{MT@#1@inh@name}{%
5010     \MT@ifdefined@c@T\MT@extra@inputenc{%
5011       \MT@xdef@n{MT@#1@inh@}\MT@curr@set@name @inputenc}{\MT@extra@inputenc}}}}%
5012 (debug) \MT@dinfo{1}{creating inheritance list `@\nameuse{MT@#1@inh@name}'}%
5013 \MT@gdef@n{MT@#1@inh@csname MT@#1@inh@name\endcsname}{#3}%
5014 \def\MT@permute@list{#1@inh}{%
5015   \setkeys{MT@inh}{#2}%
5016   \MT@permute
5017 }

```

Parse the second argument. \DeclareCharacterInheritance may also be set up for various combinations. We can reuse the key setup from the configuration lists (\Set...).

```

5018 \MT@define@code@key{encoding}{inh}
5019 \MT@define@code@key@family {inh}
5020 \MT@define@code@key{series} {inh}
5021 \MT@define@code@key{shape} {inh}
5022 \MT@define@code@key@size {inh}
5023 \MT@define@code@key@font {inh}

```

\MT@inh@do Now parse the third argument, the inheritance lists. We define the commands \MT@inh@<name>@<slot>, containing the inheriting characters. They will also be translated to slot numbers here, to save some time. The following will be executed only once, namely the first time this inheritance list is encountered (in \MT@set@<feature>@codes).

```

5024 \def\MT@inh@do#1,{%
5025   \ifx\relax#1\empty \else
5026     \MT@inh@split #1=\relax
5027     \expandafter\MT@inh@do
5028   \fi
5029 }

```

\MT@inh@split Only gather the inheriting characters here. Their codes will actually be set in \MT@set@<feature>@codes.

```

5083 \fi
5084 \MT@temp
5085 }

```

1.3.8 Permutation

`\MT@permute` Calling `\MT@permute` will define commands for all permutations of the specified font attributes of the form `\MT@<list type>@/<encoding>/<family>/<series>/<shape>/<|*>` to be the expansion of `\MT@<list type>@name`, i.e., the name of the currently defined list. Size ranges are held in a separate macro called `\MT@<list type>@@sizes`, which in turn contains the respective *<list name>*s attached to the ranges. So that,

```

\SetProtrusion
{ encoding = U,
  family   = {euroitc,euroitcs} }
{ E = {100,50} }

\SetProtrusion
{ encoding = U,
  family   = {euroitc,euroitcs},
  shape    = it* }

```

```
{ E = {100,} }
```

would yield the following assignments:

```
5086 \MT@gdef@n{\MT@pr@c@U/euroitc//}{euroitc}
5087 \MT@gdef@n{\MT@pr@c@U/euroitcs//}{euroitcs}

5489       \MT@MT.sty provides:\MessageBreak` \MT@version',\MessageBreak
5490       whereas #2 provides:\MessageBreak` #1'.\MessageBreak
5491       Please fix your installation}}}
5492 \input{\MT@MT-\MT@engine tex.def}
5493 \edef@tempa{\expandafter\expandafter\expandafter\MT@get@MT@version
5494   \csname ver@\MT@MT-\MT@engine tex.def\endcsname@nil}
5495 \MT@check@MT@version@tempa{\MT@MT-\MT@engine tex.def}
```

1.4.3 Reading the configuration file

The package should just work if called without any options. Therefore, expansion will be switched off by default if output is DVI, since it isn't likely that expanded fonts are available. (This grows more important as modern TeX systems have switched to the pdfTeX engine even for DVI output, so that the user might not even be aware of the fact that she's running pdfTeX.)

```

5496 \MT@protrusiontrue
5497 (*package)
5498 (*pdf-|lua-)
5499 \ifnum\pdffoutput<\@ne \else
```

Also, we only enable expansion by default if pdfTeX can expand the fonts automatically.

```

5500 (*pdf-) \MT@requires@pdftex4{
5501   \MT@expansiontrue
5502 (*pdf-) \MT@autottrue
5503 (*pdf-) }\relax
5504 \fi
5505 (*lua-)\MT@autottrue
5506 (*pdf-|lua-)
```

The main configuration file will be loaded before processing the package options.

\MT@config@file However, the config option must of course be evaluated beforehand. We also have to define a no-op for the regular option processing later.

```

5507 (*package)
5508 \define@key{MT}{config}[]{\relax}
5509 \def\MT@temp#1config=#2,#3@nil{%
5510   \MT@ifempty{#2}{%
5511     {\def\MT@config@file{\MT@MT.cfg}}%
5512     {\def\MT@config@file{#2.cfg}}%
5513   }%
5514 \expandafter\expandafter\expandafter\MT@temp
5515   \csname opt@\currname.\@currext\endcsname,config=,\@nil
```

Load the file.

```

5516 \IfFileExists{\MT@config@file}{%
5517   \MT@info@n{Loading configuration file \MT@config@file}%
5518   \MT@begin@catcodes
5519   \let\MT@begin@catcodes\relax
5520   \let\MT@end@catcodes\relax
5521   \let\MT@curr@file\MT@config@file
5522   \input{\MT@config@file}%
5523   \endgroup
5524 }{\MT@warning@n{%
5525   Could not find configuration file ` \MT@config@file'!\MessageBreak}}
```

```

5526 This will almost certainly cause undesired results.\MessageBreak
5527 Please fix your installation}%
5528 }

```

\MT@check@active@set We have to make sure that font sets are active. If the user didn't activate any, we use those sets declared by \DeclareMicrotypeSetDefault (this is done at the end of the preamble).

```

5529 \def\MT@check@active@set#1{%
5530   \MT@ifdefined@n@TF{\MT@#1@setname}{%
5531     \MT@info@n{Using \@nameuse{\MT@abbr@#1} set `@\nameuse{\MT@#1@setname}'}%
5532   }{%
5533     \MT@ifdefined@n@TF{\MT@default@#1@set}{%

5536     }{%
}

```

If no default font set has been declared in the main configuration file, we use the (empty, non-existent) set '@', and issue a warning.

```

5537 \MT@gdef@n{\MT@#1@setname}{@}%
5538 \MT@warning@n{No \@nameuse{\MT@abbr@#1} set chosen, no default set declared.%
5539   \MessageBreak Using empty set}%
5540 }%
5541 }%
5542 }

```

1.4.4 Hook for other packages

\Microtype@Hook This hook may be used by font package authors, e.g., to declare alias fonts. If it is defined, it will be executed here, i.e., after the main configuration file has been loaded, and before the package options are evaluated.

This hook was needed in versions prior to 1.9a to overcome the situation that (1) the microtype package should be loaded after all font defaults have been set up (hence, using \@ifpackageloaded in the font package was not viable), and (2) checking \AtBeginDocument could be too late, since fonts might already have been loaded, and consequently set up, in the preamble. With the new deferred setup, one could live without this command, however, it remains here since it's simpler than testing whether the package was loaded both in the preamble as well as at the beginning of the document (which is what one would have to do).

Package authors should check whether the command is already defined so that existing definitions by other packages aren't overwritten. Example:

```

\def\MinionPro@MT@Hook{\DeclareMicrotypeAlias{MinionPro-LF}{MinionPro}}
\@ifpackageloaded{microtype}
  \MinionPro@MT@Hook
  {\@ifundefined{Microtype@Hook}
    {\@let\Microtype@Hook\MinionPro@MT@Hook}
    {\g@addto@macro\Microtype@Hook{\MinionPro@MT@Hook}}}

```

\MicroType@Hook with a capital T (which only existed in version 1.7) is now officially deprecated.

```

5543 \MT@ifdefined@c@T\MicroType@Hook{\MT@error{%
5544   Command \@backslashchar MicroType@Hook is deprecated.\MessageBreak
5545   Use \@backslashchar Microtype@Hook instead}%
5546   {You might want to inform the font package authors.}\MicroType@Hook}%
5547 \MT@ifdefined@c@T\Microtype@Hook\Microtype@Hook

```

1.4.5 Changing options later

\microtypesetup
\MT@define@optionX Inside the preamble, \microtypesetup accepts the same options as the package (unless `defersetup=false`). In the document body, it accepts the options: `protrusion`, `expansion`, `activate`, `tracking`, `spacing` and `kerning` (but specifying font sets is not allowed), and `patch` and `nopatch`.

```
5548 \DeclareRobustCommand\microtypesetup{\setkeys{MT}}
5549 \MT@addto@setup{\DeclareRobustCommand\microtypesetup[1]{\setkeys{MTX}{#1}\selectfont}}
5550 (package)
5551 (*pdf-|lua-|xe-)
5552 \def\MT@define@optionX#1#2{%

\MT@setup@PDF pdfTeX can create DVI output, too. However, both the DVI viewer and dvips need to find actual fonts. Therefore, expansion will only work if the fonts for different degrees of expansion are readily available.

Some packages depend on the value of \pdfoutput and will get confused if it is changed after they have been loaded. These packages are, among others: `color`, `graphics`, `hyperref`, `crop`, `contour`, `pstricks` and, as a matter of course, `ifpdf`. Instead of testing for each package (that's not our job), we only say that it was `microtype` that changed it. This must be sufficient!

\MT@setup@expansion For DVI output, the user must have explicitly passed the `expansion` option to the package. Under `LuaTeX`, expansion works quite differently: the glyphs will be positioned as if they were transformed, without actually being transformed. Since this could still be considered a viable option, we don't disable the feature completely, but issue a warning.

```

\MT@auto Automatic expansion of the font? This new feature of pdfTeX 1.20 makes the *iz* programme really usable. It must be either ‘autoexpand’ or empty (or ‘1000’ for older versions of pdfTeX). With LuaTeX, we just leave it empty, as there’s actually no difference – non-automatic font expansion doesn’t work anymore. In LuaTeX 1.0.6, the ‘autoexpand’ option seems to have been removed altogether and would trigger a warning.

```

6123     \MT@with@babel@and@T{canadien} \MT@if@true
6124     \MT@with@babel@and@T{acadian} \MT@if@true
6125   \ifMT@if@MT@shorthandoff{French}{::!?\!}\fi

```

Disable Turkish babel's active characters.

```

6126   \MT@if@false
6127     \MT@with@babel@and@T{turkish} \MT@if@true
6128     \ifMT@if@MT@shorthandoff{Turkish}{::!=}\fi
6129   \fi

```

In case babel was loaded before microtype:

```
6130   \MT@set@babel@context\languagename
```

The `polyglossia` package has a useful hook. Unfortunately, compatibility with `polyglossia` is less useful in itself, as only LuaTeX allows working on font copies, and currently doesn't provide the kerning or spacing feature. But who knows, maybe somebody would want more protrusion in French...

```

6131   }{%
6132   \@ifpackageloaded{polyglossia}{%
6133     \MT@info@nl{Registering with polyglossia's language switching hook}%
6134     \gappto@polyglossia@language@switched{%
6135       \MT@set@babel@context{\languagename}%
6136     }%
6137     \MT@set@babel@context\languagename
6138   }{%
6139     \MT@warning@nl{%
6140       You did not load the babel or the polyglossia package.\MessageBreak
6141       The `babel' option won't have any effect}%
6142   }%
6143 }%
6144 \fi
6145 }

```

Now we close the `\fi` from `\ifMT@disable`.

```
6146 \MT@addto@setup{\fi}
```

Set up the current font, most likely the normal font. This has to come after all of the setup (including anything from the preamble) has been dealt with.

```
6147   \selectfont
```

`\MT@curr@file` This is the current file (hopefully with the correct extension).

```

6148 \edef\MT@curr@file{\jobname.tex}
6149 (package)

```

Finally, execute the setup macro at the end of the preamble, and empty it (the `combine` class calls it repeatedly).

```
6150 {*package|letterspace}  
6151 {plain}\MT@requires@lateX1{  
6152 \AtBeginDocument{\MT@setup@ \MT@glet\MT@setup@\emptyset}  
6153 {plain}}\relax  
6154 (/package|letterspace)
```

Must come at the very, very end.

```
6155 {package}\MT@ifdefined@c@T\MT@setup@spacing@check  
6156 {package} {\AtBeginDocument{\MT@setup@spacing@check}}
```

Restore catcodes.

```
6157 {package|letterspace}\MT@restore@catcodes
```

That was that.

2 Configuration files

Let's now write the font configuration files.

6158 (*config)

6159

2.1 Font sets

We first declare some sets in the main configuration file.

```

6160 (*m-t)
6161 %% -----
6162 %% FONT SETS
6163
6164 \DeclareMicrotypeSet{all}
6165 {
6166
6167 \DeclareMicrotypeSet{allmath}
6168 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,EU1,EU2,TU,TS1,OML,OMS,U} }
6169
6170 \DeclareMicrotypeSet{alltext}
6171 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,TS1,EU1,EU2,TU} }
6172
6173 \DeclareMicrotypeSet{allmath-nott}
6174 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,EU1,EU2,TU,TS1,OML,OMS,U},
6175     family = {rm*,sf*}
6176 }
6177
6178 \DeclareMicrotypeSet{alltext-nott}
6179 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,TS1,EU1,EU2,TU},
6180     family = {rm*,sf*}
6181 }
6182

6184 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,EU1,EU2,TU,OML,OMS},
6185     family = {rm*,sf*},
6186     series = {md*},
6187     size = {normalsize,footnotesize,small,large}
6188 }
6189
6190 \DeclareMicrotypeSet{basictext}
6191 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,EU1,EU2,TU},
6192     family = {rm*,sf*},
6193     series = {md*},
6194     size = {normalsize,footnotesize,small,large}
6195 }
6196
6197 \DeclareMicrotypeSet{smallcaps}
6198 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,TS1,EU1,EU2,TU},
6199     shape = {sc*,si,scit}
6200 }
6201
6202 \DeclareMicrotypeSet{footnotesize}
6203 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,TS1,EU1,EU2,TU},
6204     size = {-small}
6205 }
6206
6207 \DeclareMicrotypeSet{scriptsize}
6208 { encoding = {OT1,T1,T2A,LY1,OT4,QX,T5,TS1,EU1,EU2,TU},

```

```

6209     size      = {-footnotesize}
6210   }
6211
6212 \DeclareMicrotypeSet{normalfont}
6213   { font = *//*/*/* }
6214

```

The default sets.

```

6215 %% -----
6216 %% DEFAULT SETS
6217
6218 \DeclareMicrotypeSetDefault[protrusion]{alltext}
6219 \DeclareMicrotypeSetDefault[expansion] {alltext-nott}
6220 \DeclareMicrotypeSetDefault[spacing]   {alltext-nott}
6221 \DeclareMicrotypeSetDefault[kerning]  {alltext}
6222 \DeclareMicrotypeSetDefault[tracking] {smallcaps}
6223

```

2.2 Font variants and aliases

These are the variants I happen to be using (expert encoding, oldstyle numerals, swashes, alternative, display, inferior and superior numerals): Additionally, we add the now common variants for Lining, Tabular, Oldstyle, and Tabular Oldstyle numbers.

```

6224 %% -----
6225 %% FONT VARIANTS AND ALIASES
6226
6227 \DeclareMicrotypeVariants{x,j,w,a,d,0,1,-LF,-TLF,-OsF,-T0sF}

```

Other candidates: 2 (proportional digits), e (engraved), f (Fraktur), g (small text), h (shadow), l (outline), n (informal), p (ornaments), r (roman), s (sans serif), t (typewriter). I've omitted them since they seem hardly be used and/or they are actually more than just a variant, i.e., they shouldn't share a file.

Fonts that are ‘the same’: The `fontspec` package will set `lmr` as the default font, whose declarations for EU1/EU2/TU encoding are in `mt-LatinModernRoman.cfg`. Since 2016/12/03, the default encoding with X_ET_EX and LuaT_EX in the L_AT_EX format is TU, even if `fontspec` is not loaded.

```

6228
6229 \MT@if@false
6230 \ifx\UnicodeEncodingName@\undefined\else
6231   \MT@ifstreq{\encodingdefault}{\UnicodeEncodingName}\MT@if@true\relax
6232 \fi
6233 \ifMT@fontspec\MT@if@true\fi
6234 \ifMT@if@false
6235 %% -- Computer/Latin Modern Roman
6236 \DeclareMicrotypeAlias{lmr}{Latin Modern Roman}
6237   \else
6238 \DeclareMicrotypeAlias{lmr}{cmr}          % lmodern
6239 \fi

```

The Latin Modern fonts, the virtual fonts from the `ae` and `zefonts` and the `eco` and `hfoldsty` packages (oldstyle numerals), as well as `mlmodern`, all inherit the (basic) settings from Computer Modern Roman. Some of them are in part overwritten later. We mustn’t forget the Latin Modern math fonts.

```

6240 \DeclareMicrotypeAlias{lmsy}{cmsy}      % "
6241 \DeclareMicrotypeAlias{lmm}{cmm}        % "
6242 \DeclareMicrotypeAlias{aer}{cmr}         % ae
6243 \DeclareMicrotypeAlias{zer}{cmr}         % zefonts

```

```

6244 \DeclareMicrotypeAlias{cmor}{cmr}          % eco
6245 \DeclareMicrotypeAlias{hfor}{cmr}           % hfoldsty
6246 \DeclareMicrotypeAlias{mlmr}{cmr}           % mlmodern
6247 \DeclareMicrotypeAlias{mlmsy}{cmsy}          % "
6248 \DeclareMicrotypeAlias{mlmm}{cmm}            % "

```

Another, new Computer Modern extension. The `newcomputermodern` package loads it by file name.

```

6249 \DeclareMicrotypeAlias{NewCM10-Book.otf}    {New Computer Modern}
6250 \DeclareMicrotypeAlias{NewCM10-Regular.otf} {New Computer Modern}

```

CMU Serif can use the settings from New Computer Modern too.

```

6251 \DeclareMicrotypeAlias{CMU Serif}          {New Computer Modern}

```

The Crimson font is (intentionally) reasonably close to Minion to share the settings.

```

6252 %% -- Minion
6253 \DeclareMicrotypeAlias{Crimson-TLF}{pmnx}
6254 \DeclareMicrotypeAlias{Crimson-T0sF}{pmnj}

```

The packages `pxfonts` and `txfonts` fonts inherit Palatino and Times settings respectively, also the TeX Gyre fonts Pagella and Termes (formerly: `qfonts`).

```

6255 %% -- Palatino
6256 \DeclareMicrotypeAlias{pxr}{ppl}             % pxfonts
6257 \DeclareMicrotypeAlias{qpl}{ppl}              % TeX Gyre Pagella (formerly: qfonts/QuasiPalatino)

```

The ‘FPL Neu’ fonts, a ‘re-implementation’ of Palatino.

```

6258 \DeclareMicrotypeAlias{fp9x}{pplx}           % FPL Neu
6259 \DeclareMicrotypeAlias{fp9j}{pplj}             % "

```

The `newpx` package, a replacement for `pxfonts`.

```

6260 \DeclareMicrotypeAlias{zp1lf}{pplx}           % newpxtext
6261 \DeclareMicrotypeAlias{zp1osf}{pplj}           % "
6262 \DeclareMicrotypeAlias{zp1tlf}{pplx}           % "
6263 \DeclareMicrotypeAlias{zp1tosf}{pplj}           % "

```

The `domitian` package.

```

6264 \DeclareMicrotypeAlias{Domitian-TLF}{pplx} % domitian
6265 \DeclareMicrotypeAlias{Domitian-T0sF}{pplj} % "

```

The OpenType versions:

```

6266 \DeclareMicrotypeAlias{Palatino Linotype}{Palatino}
6267 \DeclareMicrotypeAlias{Palatino LT Std}{Palatino}
6268 \DeclareMicrotypeAlias{TeX Gyre Pagella}{Palatino}
6269 \DeclareMicrotypeAlias{Domitian}{Palatino}
6270 \DeclareMicrotypeAlias{Asana Math}{Palatino}
6271 %% -- Times New Roman
6272 \DeclareMicrotypeAlias{txr}{ptm}               % txfonts

```

The `newtx` package, a replacement for `txfonts`.

```

6273 \DeclareMicrotypeAlias{ntxlf}{ptmx}           % newtxtext
6274 \DeclareMicrotypeAlias{ntxtlf}{ptmx}           % "
6275 \DeclareMicrotypeAlias{ntxosf}{ptmj}           % "
6276 \DeclareMicrotypeAlias{ntxtosf}{ptmj}           % "

```

The `tempora` package.

```

6277 \DeclareMicrotypeAlias{Tempora-TLF}{ptmx} % tempora
6278 \DeclareMicrotypeAlias{Tempora-T0sF}{ptmj} % "
6279 \DeclareMicrotypeAlias{qtm}{ptm}             % Tex Gyre Termes (formerly: qfonts/QuasiTimes)

```

The `step` package.

```

6280 \DeclareMicrotypeAlias{STEP-TLF}{ptmx} % step
6281 \DeclareMicrotypeAlias{STEP-T0sF}{ptmj} % "

```

The `stix`, `stix2` and `stickstoo` packages (the latter two have departed a bit from being a Times clone, but still seem close enough).

```
6282 \DeclareMicrotypeAlias{stix} {ptm}      % stix
6283 \DeclareMicrotypeAlias{stix2}{ptm}        % stix2
6284 \DeclareMicrotypeAlias{SticksTooText-LF} {ptmx}
6285 \DeclareMicrotypeAlias{SticksTooText-TLF} {ptmx}
6286 \DeclareMicrotypeAlias{SticksTooText-OsF} {ptmj}
6287 \DeclareMicrotypeAlias{SticksTooText-T0sF}{ptmj}
```

More Times variants, to be checked: `pns`, `mns` (`TimesNewRomanPS`); `mnt` (`Times-NewRomanMT`, `TimesNRSevenMT`), `mtm` (`TimesSmallTextMT`); `pte` (`TimesEuropa`); `ptt` (`TimesTen`); `TimesEighteen`; `TimesModernEF`.

MicroPress's Charter version (`chmath`).

```
6288 %% -- Charter
6289 \DeclareMicrotypeAlias{chr}{bch}        % CH Math
```

The `XCharter` package extends the Charter fonts.

```
6290 \DeclareMicrotypeAlias{XCharter-TLF} {bch} % XCharter
6291 \DeclareMicrotypeAlias{XCharter-T0sF}{bch} % "
```

The `mathdesign` package provides math fonts matching Bitstream Charter and URW Garamond.

```
6292 \DeclareMicrotypeAlias{mdbch}{bch}        % mathdesign/Charter
6293 %% -- Garamond
6294 \DeclareMicrotypeAlias{mdugm}{ugm}         % mathdesign/URW Garamond
```

The `garamondx` package, an extension of URW Garamond, providing small caps and oldstyle figures.

```
6295 \DeclareMicrotypeAlias{zgmx}{ugm}          % garamondx
6296 \DeclareMicrotypeAlias{zgmj}{ugm}          % "
6297 \DeclareMicrotypeAlias{zgml}{ugm}          % "
6298 \DeclareMicrotypeAlias{zgmq}{ugm}          % "
```

Because a configuration file for Adobe Garamond wouldn't be permitted for TeX Live distribution, we use EB Garamond as the base font.

```
6299 \DeclareMicrotypeAlias{pad} {EBGaramond-LF} % Adobe Garamond
6300 \DeclareMicrotypeAlias{padx} {EBGaramond-TLF} % "
6301 \DeclareMicrotypeAlias{padj} {EBGaramond-T0sF} % "
6302 %% --
```

URW Letter Gothic is similar enough to Bitstream Letter Gothic to share the configuration.

```
6303 \DeclareMicrotypeAlias{ulg}{b1g}           % URW LetterGothic -> Bitstream LetterGothic12Pitch
```

The `eulervm` package virtually extends the Euler fonts.

```
6304 \DeclareMicrotypeAlias{zeur}{eur}          % Euler VM
6305 \DeclareMicrotypeAlias{zeus}{eus}          % "
```

Euro symbol fonts, to save some files.

```
6306 \DeclareMicrotypeAlias{zpeus} {zpeu}        % Adobe Euro sans -> serif
6307 \DeclareMicrotypeAlias{eurosans}{zpeu}       % Adobe Euro sans -> serif
```

The Lato and Fontin fonts (and many, many more...) only contain a basic set of glyphs. We alias them here to the basic settings (see 3.1.5) to prevent lots of warning messages from the inheritance settings; they will still receive protrusion settings from the default (T1) configuration.

```
6308 \DeclareMicrotypeAlias{Lato}                {TU-basic}
6309 \DeclareMicrotypeAlias{Lato-Regular}        {TU-basic}
6310 \DeclareMicrotypeAlias{Fontin}              {TU-basic}
6311 \DeclareMicrotypeAlias{Fontin-Regular}      {TU-basic}
6312 \DeclareMicrotypeAlias{Bergamo Std}         {TU-basic}
```

The `fontawesome` and `fontawesome5` packages are aliased to empty settings (see [3.1.6](#) and [3.2.6](#)).

```
6313 \DeclareMicrotypeAlias{FontAwesome}      {TU-empty} % fontawesome
6314 \DeclareMicrotypeAlias{fontawesomelibre} {TU-empty} % fontawesome5/6
6315 \DeclareMicrotypeAlias{fontawesomepro}   {TU-empty}
6316 \DeclareMicrotypeAlias{fontawesomebrands}{TU-empty}
6317
```

2.3 Interaction with babel

Contexts that are to be set when switching to a language.

```
6318 %% -----
6319 %% INTERACTION WITH THE `babel' PACKAGE
6320
6321 \DeclareMicrotypeBabelHook
6322   {english,UKenglish,british,USenglish,american}
6323   {kerning=, spacing=nonfrench}
6324
6325 \DeclareMicrotypeBabelHook
6326   {french,francais,acadian,canadien}
6327   {kerning=french, spacing=}
6328
6329 \DeclareMicrotypeBabelHook
6330   {turkish}
6331   {kerning=turkish, spacing=}
6332
```

2.4 Note on admissible characters

All printable ASCII characters are allowed in the settings, with the following exceptions (on the left hand side, the replacements on the right):

\	:	\textbackslash
{	:	\textbraceleft
}	:	\textbraceright
^	:	\textasciicircum
%	:	\%
#	:	\#

Comma and equal sign must be guarded with braces ('{,}', '{=}') to keep `keyval` happy.

Character commands are allowed as far as they have been defined in the proper L^AT_EX way, that is, when they have been assigned a slot in the font encoding with `\DeclareTextSymbol` or `\DeclareTextComposite`. Characters defined via `\chardef` are also possible.

Ligatures and `\mathchardef`'ed symbols have to be specified numerically. Of course, numerical identification is possible in any other case, too.

8-bit characters are also admissible, provided they have been declared in the input encoding file. They should, however, only be used in private configuration files, where the proper input encoding is guaranteed, or else in combination with the 'inputenc' key.

With X_ET_EX or LuaT_EX, in contrast, it is advisable to use the proper Unicode characters, or the font-specific glyph names prefixed with '/' (cf. section 3).

2.5 Character inheritance

First the lists of inheriting characters. We only declare those characters that are the same on *both* sides, i.e., not CE for O.

```
6333 (/m-t)
6334 (*m-t|ebg|zpeu|mvs)
6335 %% -----
6336 %% CHARACTER INHERITANCE
6337
6338 (/m-t|ebg|zpeu|mvs)
6339 (*m-t)
```

2.5.1 OT1

Glyphs that should possibly inherit settings on one side only: 012 ('fi' ligature), 013 ('fl'), 014 ('ffi'), 015 ('ffl'), Æ, æ, CE, œ.

```
6340 \DeclareCharacterInheritance
6341   { encoding = OT1 }
6342   { f = {011}, % ff
6343     i = {\i},
6344     j = {\j},
6345     O = {\O},
6346     o = {\o}
6347   }
6348
```

To accomodate the quirky nature of OT1, we have to provide dedicated settings without the f to ff inheritance for tt families.

```
6349 \DeclareCharacterInheritance
6350   { encoding = OT1,
6351     family = tt* }
6352   { i = {\i},
6353     j = {\j},
6354     O = {\O},
6355     o = {\o}
6356   }
6357
```

2.5.2 T1

Candidates here: 028 ('fi'), 029 ('fl'), 030 ('ffi'), 031 ('ffl'), 156 ('IJ' ligature, since L^AT_EX 2005/12/01 accessible as \IJ), 188 ('ij', \ij), Æ, æ, CE, œ.

```
6358 \DeclareCharacterInheritance
6359   { encoding = T1 }
6360   { A = {\`A,\^A,\~A,\^A,\r A,\k A,\u A},
6361     a = {\`a,\^a,\~a,\^a,\r a,\k a,\u a},
6362     C = {\`C,\c C,\v C},
6363     c = {\`c,\c c,\v c},
6364     D = {\v D,\DH},
6365     d = {\v d,\dj},
6366     E = {\`E,\^E,\~E,\^E,\k E,\v E},
6367     e = {\`e,\^e,\~e,\^e,\k e,\v e},
6368     f = {027}, % ff
6369     G = {\u G},
6370     g = {\u g},
6371     I = {\`I,\^I,\~I,\^I,\.I},
6372     i = {\`i,\^i,\~i,\^i,\.i},
6373     j = {\j},
6374     L = {\L,\^L,\v L},
6375     l = {\l,\^l,\v l},
6376     N = {\N,\~N,\v N},
```

```

6377     n = {'\n', '\~n', '\v n},
6378     O = {'\O', '\~O', '\^O', '\~O', '\^O', '\H O},
6379     o = {'\o', '\~o', '\^o', '\~o', '\^o', '\H o},
6380     R = {'\R', '\v R},
6381     r = {'\r', '\v r},
6382     S = {'\S', '\c S', '\v S', '\SS},
6383     s = {'\s', '\c s', '\v s},
6384     T = {'\c T', '\v T},
6385     t = {'\c t', '\v t},
6386     U = {'\U', '\^U', '\U', '\^U', '\U', '\H U', '\r U},
6387     u = {'\u', '\^u', '\U', '\^u', '\U', '\H u', '\r u},
6388     Y = {'\Y', '\^Y},
6389     y = {'\y', '\^y},
6390     Z = {'\Z', '\.Z', '\v Z},
6391     z = {'\z', '\.z', '\v z}

```

The ‘soft hyphen’ often has reduced right side bearing so that it may already be protruded, hence no inheritance.

```

6392 %     - = {127},
6393 }
6394

```

2.5.3 LY1

More characters: 008 (‘fl’), 012 (‘fi’), 014 (‘ffl’), 015 (‘ffl’), \mathcal{A} , \mathcal{E} , $\mathcal{C}\mathcal{E}$, $\mathcal{O}\mathcal{E}$.

```

6395 \DeclareCharacterInheritance
6396   { encoding = LY1 }
6397   { A = {'\A', '\^A', '\~A', '\^A', '\H A}, 
6398     a = {'\`a', '\^a', '\~a', '\^a', '\H a}, 
6399     C = {'\c C},
6400     c = {'\c c},
6401     D = {'\DH},
6402     E = {'\`E', '\^E', '\~E', '\^E},
6403     e = {'\`e', '\^e', '\~e', '\^e},
6404     f = {011}, % ff
6405     I = {'\`I', '\^I', '\~I', '\^I},
6406     i = {'\`i', '\^i', '\~i', '\^i}, 
6407     L = {'\L},
6408     l = {'\l},
6409     N = {'\~N},
6410     n = {'\~n},
6411     O = {'\`O', '\^O', '\~O', '\~O', '\^O', '\O},
6412     o = {'\`o', '\^o', '\~o', '\~o', '\^o', '\o},
6413     S = {'\v S},
6414     s = {'\v s},
6415     U = {'\`U', '\^U', '\~U', '\^U},
6416     u = {'\`u', '\^u', '\~u', '\^u},
6417     Y = {'\`Y', '\^Y},
6418     y = {'\`y', '\^y},
6419     Z = {'\v Z},
6420     z = {'\v z}
6421 }
6422

```

2.5.4 OT4

The Polish OT1 extension. More interesting characters here: 009 (‘fk’), 012 (‘fi’), 013 (‘fl’), 014 (‘ffl’), 015 (‘ffl’), \mathcal{A} , \mathcal{E} , $\mathcal{C}\mathcal{E}$, $\mathcal{O}\mathcal{E}$.

```

6423 \DeclareCharacterInheritance
6424   { encoding = OT4 }
6425   { A = {'\k A},
6426     a = {'\k a},

```

```

6427   C = {'\C},
6428   c = {'c},
6429   E = {'k E},
6430   e = {'k e},
6431   f = {011}, % ff
6432   i = {'i},
6433   j = {'j},
6434   L = {'L},
6435   l = {'l},
6436   N = {'N},
6437   n = {'n},
6438   O = {'O, 'O},
6439   o = {'o, 'o},
6440   S = {'S},
6441   s = {'s},
6442   Z = {'Z, '.Z},
6443   z = {'z, '.z},
6444   \textquotedblleft = "FF
6445 }
6446

```

2.5.5 QX

The Central European QX encoding.¹⁰ Ligatures: 009 ('fk'), 012 ('fi'), 013 ('fl'), 014 ('ffi'), 015 ('ffl'), Æ, æ, œ, œ.

```

6447 \DeclareCharacterInheritance
6448 { encoding = QX }
6449 { A = {'`A, 'A, '^A, `~A, "A, \k A, \AA},
6450   a = {'`a, 'a, '^a, `~a, "a, \k a, \aa},
6451   C = {'C, \c C},
6452   c = {'c, \c c},
6453   D = {'DH},
6454   E = {'`E, 'E, '^E, "E, \k E},
6455   e = {'`e, 'e, '^e, "e, \k e},
6456   f = {011}, % ff
6457   I = {'`I, 'I, '^I, "I, \k I},
6458   i = {'`i, 'i, '^i, "i, \k i, \i},
6459   j = {'j},
6460   L = {'L},
6461   l = {'l},
6462   N = {'N, \~N},
6463   n = {'n, \~n},
6464   O = {'O, `O, '^O, `~O, "O, \~O, "O},
6465   o = {'o, `o, '^o, `~o, "o, \~o, "o},

```

The Romanian \textcommabelow accents are actually replacements for the \c variants, which had previously (and erroneously¹¹) been included in QX encoding. They are still kept for backwards compatibility.

```

6466   S = {'S, \c S, \textcommabelow S, \v S},
6467   s = {'s, \c s, \textcommabelow s, \v s},
6468   T = {'c T, \textcommabelow T},
6469   t = {'c t, \textcommabelow t},
6470   U = {'`U, 'U, '^U, "U, \k U},
6471   u = {'`u, 'u, '^u, "u, \k u},
6472   Y = {'Y, "Y},
6473   y = {'y, "y},
6474   Z = {'Z, '.Z, \v Z},
6475   z = {'z, '.z, \v z},
6476   . = \textellipsis
6477 }

```

6508

```

2.5.7 EU1, EU2, TU

The EU1 (X_ET_EX), EU2 (LuaT_EX), and, since fontspec version 2.5, TU encodings are not well-defined in the sense that they don't contain a fixed number of glyphs, all of which must be present. OpenType fonts may contain thousands of glyphs, but we only define those that should be present in every font (basically T1). This inheritance list should be overridden by font-specific ones.

```

6509 \DeclareCharacterInheritance
6510   { encoding = {TU,EU1,EU2} }
6511   { A = {\`A,\^A,\~A,\^A,\r A,\k A,\u A},

2.5.9 Euro symbols

Make Euro symbols settings simpler.

```
6580 <*zpeu>
```

```

6581 \DeclareCharacterInheritance
6582   { encoding = U,
6583     family   = {zpeu,zpeus,eurosans} }
6584   { E = 128 }
6585
6586 (/zpeu)
6587 (*mvs)

```

Since 2006/05/11 (that is, one week after I've added these settings, after the package had been dormant for six years!), marvosym's encoding is (correctly) U instead of OT1.

```

6588 \DeclareCharacterInheritance
6589   { encoding = {OT1,U},
6590     family   = mvs }
6591   { 164 = {099,100,101} } % \EURhv,\EURcr,\EURtm
6592
6593 (/mvs)

```

2.6 Tracking

By default, we only disable the ‘f*’ ligatures, for those fonts that have any. Thus, ligatures and especially kerning for all other characters will be retained. With X_HTEX, we reset all ligatures (keeping only the T_EX pseudo-ligatures).

```

6594 (*m-t)
6595 %% -----

2.8.2 Italics

To find default settings for italic is difficult, since the character shapes and their behaviour at the beginning or end of line may be wildly different for different fonts. In the generic settings we therefore omit the letters, and only set up the punctuation characters.

The italic glyphs of Computer Modern Roman feature a lot of side bearing, therefore almost all of them have to protrude.¹⁶

2.8.3 Small caps

Small caps should inherit the values from their big brothers. Since values are relative to character width, we don't need to adjust them any further (but we have to reset some characters).

```

2.8.5 Text companion

Finally the TS1 encoding. Still quite incomplete for Times and especially Palatino.
Anybody?

```

2.8.6 Computer Modern math

Now to the math symbols for Computer Modern Roman. Definitions have been extracted from `fontmath.ltx`. I did not spend too much time fiddling with these settings, so they can surely be improved.

The math font ‘operators’ (also used for the `\mathrm` and `\mathbf` alphabets) is OT1/cm_r, which we’ve already set up above. It’s declared as:

```

\DeclareSymbolFont{operators} {OT1}{cmr}{m}{n}
\SetSymbolFont{operators}{bold}{OT1}{cmr}{bx}{n}

```

`\mathit` (OT1/cm_r/m/it) is also already set up.

There are (for the moment) no settings for `\mathsf` and `\mathtt`.

Math font ‘letters’ (also used as `\mathnormal`) is declared as:

```

\DeclareSymbolFont{letters} {OML}{cmm}{m}{it}
\SetSymbolFont{letters}{bold}{OML}{cmm}{b}{it}

```

```

8915 (*cmr)
8916 \SetProtrusion

2.9 Interword spacing

Default unit is space.

```

9622 {*m-t|cmr}
9623 %% -----
9624 %% INTERWORD SPACING
9625
9626 {/m-t|cmr}
9627 {*m-t}
9628 \SetExtraSpacing
9629 [ name = default ]
9630 { encoding = {OT1,T1,LY1,OT4,QX,T5} }
9631 {

```

These settings are only a first approximation. The following reasoning is from a mail from *Ulrich Dirr*, who also provided the sample in figure 1. I do not claim to have coped with the task.

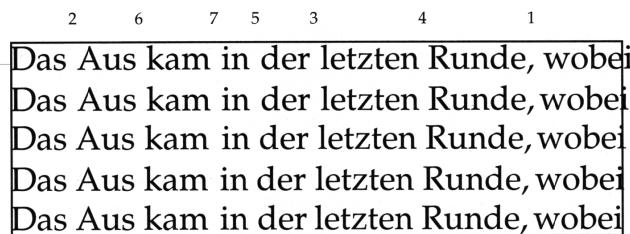

'The idea is – analog to the tables for expansion and protrusion – to have tables for optical reduction/expansion of spaces in dependence of the actual character so that the distance between words is optically equal.'

When reducing distances the (weighting) order is:

- after commas

Figure 1:

Example of interword spacing (from: M. Siemoneit, *Typographisches Gestalten*, Frankfurt/M. 1989). The numbers indicate the preference for shrinking the interword space.

$$9632 \quad \{ , \} = \{ , -500, 500 \},$$

- in front of capitals which have optical more room on their left side, e.g., 'A', 'J', 'T', 'V', 'W', and 'Y' [this is not yet possible – RS]
 - in front of capitals which have circle/oval shapes on their left side, e.g., 'C', 'G', 'O', and 'Q' [ditto – RS]
 - after 'r' (because of the bigger optical room on the righthand side)

$$9633 \qquad r = \{ , -300, 300 \},$$

- [before or] after lowercase characters with ascenders

```
9634 b = { , -200, 200},  
9635 d = { , -200, 200},  
9636 f = { , -200, 200},  
9637 h = { , -200, 200},  
9638 k = { , -200, 200},  
9639 l = { , -200, 200},  
9640 t = { , -200, 200},
```

- [before or] after lowercase characters with x-height plus descender with additional optical space, e.g., ‘v’, or ‘w’

```
9641   c = { , -100, 100 },
9642   p = { , -100, 100 },
9643   v = { , -100, 100 },
9644   w = { , -100, 100 },
9645   z = { , -100, 100 },
9646   x = { , -100, 100 },
9647   y = { , -100, 100 },
```

- [before or] after lowercase characters with x-height plus descender without additional optical space

9648	i = { , 50, -50},
9649	m = { , 50, -50},
9650	n = { , 50, -50},
9651	u = { , 50, -50}.

- after colon and semicolon

$$\begin{array}{ll} 9652 & : = \{ ,200,-200\}, \\ 9653 & ; = \{ ,200,-200\}, \end{array}$$

- after punctuation which ends a sentence, e.g., period, exclamation mark, question mark

9654	.	=	{ ,250,-250},
9655	!	=	{ ,250,-250},
9656	?	=	{ .250,-250}

The order has to be reversed when enlarging is needed.'

9657 }
9658
9659 ⟨ /m -

Questions are:

- Is the result really better?
- Is it overdone? (Try with a factor < 1000.)
- Should the first parameter also be used? (Probably.)
- What about quotation marks, parentheses etc.?

Furthermore, there seems to be a pdfTEX bug with spacing in combination with a non-zero \spaceskip (reported by Axel Berger):

```
\parfillskip0pt
\righskip0pt plus 1em
\spaceskip\fontdimen2\font
  test test\par
\pdfadjustinterwordglue2
\stbscode\font`t=-50
  test test
\bye
```

Some more characters in T2A.¹⁸

```
9660 {*cmr}
9661 \SetExtraSpacing
9662 [ name      = T2A,
9663   load      = default ]
9664 { encoding  = T2A,
9665   family    = cmr }
9666 {
9667   \cyrг = { , -300, 300},
9668   \cyrб = { , -200, 200},
9669   \cyrк = { , -200, 200},
9670   \cyrс = { , -100, 100},
9671   \cyrр = { , -100, 100},
9672   \cyrһ = { , -100, 100},
9673   \cyrү = { , -100, 100},
9674   \cyrт = { , 50, -50},
9675   \cyrр = { , 50, -50},
9676   \cyrі = { , 50, -50},
9677   \cyrішт = { , 50, -50},
9678 }
9679
```

2.9.1 Nonfrenchspacing

The following settings simulate \nonfrenchspacing (since space factors will be ignored when spacing adjustment is in effect). They may be used for English contexts.

From the TeXbook:

'If the space factor f is different from 1000, the interword glue is computed as follows: Take the normal space glue for the current font, and add the extra space if $f \geq 2000$. [...] Then the stretch component is multiplied by $f/1000$, while the shrink component is multiplied by $1000/f$.'

The 'extra space' (\fontdimen7) for Computer Modern Roman is a third of \fontdimen2, i.e., 333.

```
9680 \SetExtraSpacing
9681 [ name      = nonfrench-cmr,
9682   load      = default,
```

¹⁸ Contributed by Karl Karlsson.

```

9683     context  = nonfrench ]
9684 { encoding = {OT1,T1,LY1,OT4,QX,T5},
9685   family   = cmr }
9686 }
```

`latex.ltx` has:

```
\def\nonfrenchspacing{
  \sfcode`\. 3000
  \sfcode`\? 3000
  \sfcode`\! 3000
```

```

9687   . = {333,2000,-667},
9688   ? = {333,2000,-667},
9689   ! = {333,2000,-667},
```

```
\sfcode`\: 2000
```

```
9690   : = {333,1000,-500},
```

```
\sfcode`\; 1500
```

```
9691   ; = { , 500,-333},
```

```
\sfcode`\, 1250
```

```
9692   {,}= { , 250,-200}
```

```
}
```

```
9693 }
```

```
9694
```

```
9695 
```

`fontinst`, however, which is also used to create the `psnfss` font metrics, sets `\fontdimen 7` to 240 by default. Therefore, the fallback settings use this value for the first component.

```

9696 (*m-t)
9697 \SetExtraSpacing
9698 [ name    = nonfrench-default,
9699   load    = default,

9722   { }
9723
```

2.10.1 French

The ratio of `\fontdimen 2` to `\fontdimen 6` varies for different fonts, so that either the kerning of the colon (which should be a space, i.e., `\fontdimen 2`) or that of the other punctuation characters (TeX's `\thinspace`, i.e., one sixth of `\fontdimen 6`) may be inaccurate, depending on which unit we choose (space or 1em). For Times, for example, a thin space would be 665. I don't know whether French typography really wants a thin space, or rather (as it happens to turn out with CMR) half a space. (Wikipedia¹⁹ claims it should be a quarter of an em, which seems too much to me; then again, it also says that this was a thin space in French typography.)

```
9724 \SetExtraKerning
9725   [ name      = french-default,
9726     context   = french,
9727     unit      = space   ]
9728   { encoding = {OT1,T1,LY1} }
9729   {
9730     : = {1000,}, % = \fontdimen2
9731     ; = {500, }, % ~ \thinspace
9732     ! = {500, },
9733     ? = {500, }
9734   }
9735
```

These settings have the disadvantage that a word following a left guillemet will not be hyphenated. This might be fixed in pdfTeX.

```
9736 \SetExtraKerning
9737   [ name      = french-guillemets,
9738     context   = french-guillemets,
9739     load     = french-default,
9740     unit      = space   ]
9741   { encoding = {T1,LY1} }
9742   {
9743     \guillemotleft = {,800}, % = 0.8\fontdimen2
9744     \guillemotright = {800, }
9745   }
9746
9747 \SetExtraKerning
9748   [ name      = french-guillemets-OT1,
9749     context   = french-guillemets,
9750     load     = french-default,
9751     unit      = space   ]
9752   { encoding = OT1      }
9753   { }
```

9760     : = {167, }, % = \thinspace
9761     ! = {167, },
9762     {=} = {167, }
9763   }
9764
9765 </m-t>
9766 </config>
```

3 OpenType configuration files

These are the configuration files for the following OpenType fonts: 20

- Latin Modern Roman
 - New Computer Modern²¹
 - Charis SIL
 - EB Garamond
 - Palatino²²

The settings are typeset in the respective font.

3.1 Character inheritance

OpenType fonts may differ considerably in how complete their arsenal of glyphs is. Therefore, each font family should have their own inheritance settings.

3.1.5 Basic glyph set

There are quite a few fonts out there that don't even fill the T1 glyph set. To prevent a plethora of warnings, they may be aliased to the surrogate font TU-basic. Examples of such fonts are: Lato, Fontin and Bergamo.

```

10246 (*TU-basic)  

10247 \DeclareCharacterInheritance  

10248 { encoding = {TU,EU1,EU2},  

10249   family = {TU-basic} }  

10250 { A = { , , , , , },  

10251   a = { , , , , , },  

10252   C = { },  

10253   c = { },  

10254   D = { },  

10255   E = { , , , },  

10256   e = { , , , },  

10257   I = { , , , },  

10258   i = { , , , , },  

10259   L = { },  

10260   l = { },  

10261   N = { },  

10262   n = { },  

10263   O = { , , , , , },  

10264   o = { , , , , , },  

10265   S = { },  

10266   s = { },  

10267   U = { , , , },  

10268   u = { , , , },  

10269   Y = { , }
```

For some reason, the ÿ in the next line comes out as ß. Don't worry, there's really a y diaeresis in the source.

```

10270   y = { , },  

10271   Z = { },  

10272   z = { }  

10273 }
10274 
```

3.1.6 Empty glyph set

Other fonts, e.g., the self-professedly awesone Font Awesome font, have no meaningful glyph arsenal at all, and should therefore be aliased so that empty settings are applied.

```

10275 (*TU-empty)  

10276 \DeclareCharacterInheritance
```

```

10277 { encoding = {TU,EU1,EU2},
10278   family   = {TU-empty} }
10279 {
10280 </TU-empty>

```

3.2 Character protrusion

Needless to say that things may always be improved. For suggestions, mail to w.m.l@gmx.net or file an issue at <https://github.com/schlcht/microtype/issues>.

A The title logo

This is `microtype-logo.dtx`. You may treat this file in three different ways:

- compile it by itself
- `\input` it in the body of a `dtx` file
- `\input` it in the preamble: it then provides the command `\printlogo`, which will do just that

The first two cases require the style file `microtype-doc.sty`, which can be generated from `microtype.ins` with:

```
\makefile{microtype-doc.sty}{docsty}
```

11670 `(*logo)`

Here's how the logo on the title page was created.²³ It has nothing to do with `microtype`, actually, but uses `fontinst`. It is based on an experiment I posted to the `de.comp.text.tex` newsgroup.²⁴ It will show:

- the character
- the `TEX` box
- the bounding box
- kerns

A.1 Macros

To run this file, `TEX` needs to find the `afm` file (either in the `TEXINPUTS` path, or in the current working directory).

First input `fontinst`.

11671 `\input fontinst.sty`

`bbox.sty` is an addition to `fontinst`, which makes dimensions of the bounding boxes available (and was written by H_{an} Th_é Thành, by the way). These dimensions are specified in the `afm` file, but not used by `TEX`, which is why `fontinst` will discard them otherwise.

11672 `\input bbox.sty`

`\tempdim` Allocate some dimen registers.

11673 `\newdimen\tempdim`

`\fboxrulei` Frame width of the box as `TEX` sees it.

11674 `\newdimen\fboxrulei`

11675 `\fboxrulei=0.1pt`

`\fboxruleii` Frame width of the bounding box.

11676 `\newdimen\fboxruleii`

11677 `\fboxruleii=0.1pt`

`\kernboxheight` Height of the box indicating the kern.

11678 `\newdimen\kernboxheight`

11679 `\kernboxheight=5pt`

`\scaletoem` An auxiliary macro. Return a dimension relative to the `em-width` of the font. Requires e-`TEX`.

11680 `\setcommand\scaletoem#1{\dimexpr #1 sp*\fontdimen6\font/1000\relax}`

`\showlogo` A `fontinst` incantation whose sole purpose is to produce the logo. Its argument is a string (letters only).

11681 `\fontinstcc`

11682 `\def\showlogo#1{%`

Some fonts do not specify the `\fontdimen6` (width of an `em`) in the `afm` file. In this case, use the font size, which is correct in most cases.

11683 `\ifdim\fontdimen6\font = 0pt`

`\typeout{***~Warning:-no-\fontdimen-6-specified-***^J%}`

`***~setting-it-to-\pdffontsize\font \ifnum\pdftexversion < 130 pt\fi-***}`

`\fontdimen6\font=\pdffontsize\font \ifnum\pdftexversion < 130 pt\fi\relax`

`\fi`

`\installfonts`

`\input_metrics{}{\logofont,\metrics\printbbs{\#1}\relax}`

²³ Note that the logo module will not be created when installing `microtype`. Instead, the source file `microtype-logo.dtx` is included as an attachment in the PDF file. If your PDF reader supports this, you can [click here](#) to extract it; alternatively, you may use the `pdftk` tool.

11769 %
11770 }

\showboxes      Print the boxes for char {#1}. This won't work if {#1} isn't also the PostScript name of the glyph (e.g., 'comma' ≠ ',').
11771 \setcommand\showboxes#1{%
11772   \leavevmode
11773   \color{textcolor}%
}

We have to record the width of the glyph.

11774 \setbox0\hbox{\color{textcolor}{#1}}%
11775 \global\tempdim=\wd0\relax
11776 \kern-\fboxrulei

1. The TeX box: Print a frame in color texcolor. This frame shows the glyph as TeX sees it.

11777 \mtl@layer{TeX-boxes}{%
11778   \hbox{%
11779     \lower\dimexpr \dp0 + \fboxrulei\relax
11780   \hbox{%
11781     \vbox{%
11782       \hrule height\fboxrulei
11783     \hbox{%
11784       \vrule width\fboxrulei height \dimexpr\ht0 + 2\fboxrulei\relax
11785       \phantom{\unhcopy0}%
11786       \vrule width\fboxrulei
11787     }%
11788     \hrule height\fboxrulei}}%
11789 }

2. The character: Now we step back and print the actual glyph. We hold it back until now, so that it will be printed on top of its box.

11790 \kern-\wd0
11791 \mtl@layer{characters}{\hbox{\box0}}%

Step back by the amount that the character's bounding box differs from the TeX box on the left side.

11792 \kern\dimexpr\scaletoem{\bbl{#1}}-\tempdim-\fboxrulei\relax

```

3. *The bounding box:* will be printed in color `bbcolor`.

```

11793 \mtl@layer{bounding-boxes}{%
11794   {\color{bbcolor}%
11795     \hbox{%

11891 \pdfmapline{+pkpmmri8r10 Kep1MM-It_385_575_10_ " TeXBase1Encoding ReEncodeFont " <8r.enc <pkpmmri8a10.pfb}
```

Define colours (thered and thegreen are copied from microtype.dtx).

```
11892 \def\mtdefinecolors
11893 \definecolor{thered}{rgb}{0.65,0.04,0.07}
11894 \definecolor{thegreen}{rgb}{0.06,0.44,0.08}
11895 \colorlet{texcolor}{thegreen!50} % Tex boxes
11896 \colorlet{kerncolor}{texcolor} % negative kerns
11897 \colorlet{bbcolor}{thered!50} % bounding box
11898 \colorlet{bgcolor}{black!8} % canvas
11899 \colorlet{blcolor}{black!50} % baseline
11900 \colorlet{textcolor}{black!40} % text
11901 }
```

Use with microtype.dtx

```
11902 \ifx\documentclass\@twoclasseserror
11903 \usepackage[xcdraw]{xcolor}
11904 \mtdefinecolors
```

```
11905 \else
```

A.2 Document

Now we can start the document.

```
11906 \documentclass[10pt,a4paper]{ltxdoc}
11907 \providecommand{\MakePercentComment}{\relax}
11908 \expandafter\def\csname ver@\microtype.dtx\endcsname{2999/99/99}
```

Re-use the preamble from `microtype.dtx`.

```
11909 \usepackage{microtype-doc}
11910 \usepackage{attachfile}
11911 \makeatletter
11912 \pdfcatalog{/OCProperties << /OCGs [\mt@objects] /D << /Order [\mt@order] >>>}
11913 \makeatother
11914 \begin{document}
```

You are currently reading this.

```
11915 \DocInput{microtype-logo.dtx}
11916 \newpage
11917 And here it is:\vspace{6\baselineskip}
11918 \begin{center}
11919   \printlogo
11920 \end{center}
11921 \expandafter\enddocument
11922 \fi
```

That's it.

```
11923 \Logo
```

B The letterspacing illustration

This is `microtype-lssample.dtx`. You may treat this file in three different ways:

- compile it by itself
- `\input` it in the body of a `dtx` file
- `\input` it in the preamble: it then provides the commands
 - `\lssample`: prints the letterspacing illustration
 - `\anchorarrow`: anchors an arrow for layer `(#1)`
 - `\showarrow`: toggles layer `(#1)` or `(#2)`, and prints `(#2)`

The first two cases require the style file `microtype-doc.sty`, which can be generated from `microtype.ins` with:

```
\makefile{microtype-doc.sty}{docsty}
```

```
11924 \ifx\lssample\undefined
11925 \lssample
```

Upon popular request, here's how I've created the letterspacing illustration.²⁵

B.1 Macros

Rule width and image height and depth.

```
11926 \makeatletter
11927 \newdimen\lsamount
11928 \newdimen\lsrule
11929 \lsrule=0.2pt
11930 \def\lsheight{8pt}
11931 \def\lsdepth{12pt}
```

²⁵ Note that the `lssample` module will not be created when installing `microtype`. Instead, the source file `microtype-lssample.dtx` is included as an attachment in the PDF file. If your PDF reader supports this, you can [click here](#) to extract it; alternatively, you may use the `pdftk` tool.

Our font (Adobe Caslon).

```
11932 \def\lsfont{\fontfamily{paca}\selectfont}
        Loop over all letters in {#2}, letterspacing them by {#1}.
11933 \def\dols#1#2{\lsamount=#1\relax \dolss#2\enddols}
11934 \def\dolss#1#2\enddols{%
11935   \ifx\empty#2\empty\divide\lsamount 2\fi
11936   \ls{#1}%
11937   \ifx\empty#2\empty\else \dolss#2\enddols \fi
11938 }
```

One tikz picture for each letter.

```
11939 \def\ls#1{%
11940   \begin{tikzpicture}[remember picture, line width=\lsrule]
11941     \tikzstyle{every node}=[inner sep=0pt]
```

The bounding box.

```
11942   \mts@layer{stuff}{%
11943     \node[draw=thegrey,
11944       fill=theshade,
11945       outer sep=\lsrule,
11946       anchor=base,
11947       font=\lsfont]{\phantom{#1}};
11948 }
```

The letter.

```
11949 \node[anchor=base, font=\lsfont] (#1){#1};
```

Two auxiliary coordinates.

```
11950 \path (#1.south west) ++(+.5\lsrule,-.5\lsrule) coordinate (#1L);
11951 \path (#1.base east) ++(-.5\lsrule,-\lsdepth) coordinate (#1R);
11952 \mts@layer{stuff}{%
```

Now draw the normal character width,

```
11953   \draw[color=thered!75,
11954     fill=thered!30,
11955     outer sep=\lsrule]
11956     (#1L) rectangle (#1R);
11957   \ifdim\lsamount>0pt
11958     \path (#1.base east) ++(+.5\lsamount,-6pt) coordinate (#1_ls);
11959     \path (#1R) ++(\lsamount+\lsrule,+\lsdepth) coordinate (#1E);
```

and the letter space.

```
11960   \draw[color=thered,
11961     fill=thered!50,
11962     outer sep=\lsrule]
11963     (#1R) ++(+\lsrule,+0pt) rectangle (#1E);
11964   \fi
11965 }
11966 \end{tikzpicture}%
11967 \ignorespaces
11968 }
```

Draw the interword space.

```
11969 \def\lssp#1#2#3#4{%

12103 \makeatother
12104 \begin{document}

    You are currently reading this.

12105 \DocInput{microtype-lssample.dtx}

    Now show what we are able to do.

12106 \noindent
12107 Since a picture is worth a thousand words, probably even more if, in our
12108 case, it depicts a couple of letterspaced words, let's bring one to sum up
12109 these somewhat confusing options. Suppose you had the following settings
12110 (which I would in no way recommend; they are only for illustrative purposes):
12111 \begin{verbatim}
12112 \SetTracking
12113   [ no ligatures = {"\anchorarrow{nolig}"f},
12114     spacing      = {60"\anchorarrow{ispace}"0*, "%"
12115                           "-1"\anchorarrow{istretch}"00*, "\anchorarrow{ishrink}"},
12116     outer spacing = {4"\anchorarrow{ospace}"50,"%"
12117                           "2"\anchorarrow{ostretch}"50,1"\anchorarrow{oshrink}"50},
12118     outer kerning = {"\anchorarrow{okernbegin}"*, "%"
12119                           \anchorarrow{okernend}"*} ]
12120   { encoding = * }
12121   { 1"\anchorarrow{lamount}"60 }
12122 \end{verbatim}
12123 and then write:
12124 \begin{verbatim}
12125 Stop \textis{stealing sheep}!
12126 \end{verbatim}
12127 this is the (typographically dubious) outcome:
12128
12129 \lssample
12130
12131 \noindent
12132 While the word 'Stop' is not letterspaced, the space between the letters in
12133 the other two words is expanded by the \showarrow[tracking]{tracking-amount}{red}
12134 of 160/1000\,em\,=\allowbreak\,0.16\,em.
12135 The \showarrow{ispace}{inner-space}{green} within the letterspaced text is
12136 increased by 60\%, while its \showarrow{istretch}{stretch}{green} amount is
12137 decreased by 10\% and the \showarrow{ishrink}{shrink}{green} amount is left
12138 untouched.
12139 The \showarrow{ospace}{outer-space}{green} (of 0.45\,em) immediately before the
12140 piece of text may \showarrow{ostretch}{stretch}{green} by 0.25\,em and
12141 \showarrow{oshrink}{shrink}{green} by 0.15\,em.
12142 Note that there is no outer space after the text, since the exclamation mark
12143 immediately follows; instead, the default \showarrow{okern}{outer-kern}{red}
12144 of half the letterspace amount (0.08\,em) is added.
12145 Furthermore, one \showarrow{ligature}{grey} wasn't broken up, because we
12146 neglected to specify the '|s|' in the |no ligatures| key.
12147
12148 \expandafter\enddocument
12149 \fi
12150 
```

C Change history

Page numbers prefixed with ‘U’ refer to the User manual.

2004/09/11 Version 1.0

General: Initial version [U1](#)

2004/09/21 Version 1.1

General: configuration file names in lowercase (suggested by *Harald Harders*) 81
 remove 8-bit characters from the configuration files (suggested by *Harald Harders*) 145
 Protrusion: add factors for some more characters settings for Adobe Minion (contributed by *Harald Harders*) 153
 $\backslash\text{DeclareCharacterInheritance}$: new command: possibility to specify character inheritance 115
 $\backslash\text{MT@declare@sets}$: remove spaces around set name 101
 $\backslash\text{MT@find@file}$: fix: also check whether the file for the base font family has already been loaded 81
 $\backslash\text{MT@get@basefamily}$: only remove suffixes ‘x’ or ‘j’ 82
 $\backslash\text{MT@get@listname@}$: don’t check for empty attributes

list 83
 $\backslash\text{MT@isempty}$: fix: use category code 12 for the percent character (reported by *Tom Kink*) 20
 $\backslash\text{MT@is@number}$: numbers may also be specified in hexadecimal or octal (suggested by *Harald Harders*) 89
 $\backslash\text{MT@pdftex@no}$: fix: version check (reported by *Harald Harders*) 15
 $\backslash\text{MT@permute}$: don’t use sets for empty encoding 117
 $\backslash\text{MT@setup@expansion}$: issue an error instead of a warning, when pdfTeX version is too old for autoexpand 134
 $\backslash\text{MT@split@codes}$: fix: allow zero and negative values 45
 $\backslash\text{MT@use@set}$: remove spaces around set name 105

2004/10/03 Version 1.2

Font aliases: declare cmor as an alias of cmr 142
 Font sets: new: allmath and basicmath 141
 Protrusion: add settings for Computer Modern Roman and Adobe Garamond in TS1 encoding 184
 add settings for Computer Modern Roman math symbols 189
 $\backslash\text{MT@familyalias}$: define alias font name as an alternative, not as a replacement 41
 $\backslash\text{MT@get@basefamily}$: also remove ‘w’ (swash capitals) 82
 $\backslash\text{MT@get@highlevel}$: check whether defaults have changed 102

$\backslash\text{MT@get@inh@list}$: fix: set inheritance list \globally to \empty 85
 $\backslash\text{MT@get@listname@}$: alternatively check for alias font name 83
 $\backslash\text{MT@get@size}$: additional magic to catch some errors 103
 $\backslash\text{MT@get@size@@}$: hijack \set@fontsize instead of \setfontsize 103
 $\backslash\text{MT@loop}$: fix: new macro, used instead of \loop 24
 $\backslash\text{MT@maybe@do}$: also check for alias font name 42
 $\backslash\text{MT@permute@00000}$: more sanity checks for \SetProtrusion and \SetExpansion 119
 $\backslash\text{MT@setupfont}$: also search for alias font file 38
 fix: call \enc@update if necessary 38

2004/10/27 Version 1.3

General: fix: specifying load option does no longer require to give a name, too 112
 Font aliases: declare aer, zer and hfor as aliases of cmr 142

$\backslash\text{MT@fix@catcode}$: check some category codes (compatibility with german) 5
 $\backslash\text{MT@load@list}$: check whether list exists 81

2004/11/12 Version 1.4

General: check for pdfcprot 30
 don’t use scratch registers in global definitions 85
 use \pickup@font instead of \define@newfont as

the hook for \MT@setupfont 94
 use one instead of five counters 26
 Protrusion: tweak quote characters for cmr variants

(OT1, T1, lmr)	160	disabled in package options	128
\microtypesetup: fix: set the correct levels, and remember them; warning when enabling an option		\SetExpansion: fix: specifying extra options does no longer require to give a name, too	109

2004/11/17

Version 1.4a

General: new option: final	124	when reading files (reported by Michael Hoppe)	82
\MT@cfg@catcodes: fix: reset some more catcodes			

2004/11/26

Version 1.4b

General: fix: set catcodes before reading global configuration file (reported by Christoph Bier)	126	form abczz (reported by Georg Verwegen)	83
optimisation: use less \expandafters and \csnames	19	\MT@get@lot: don't define \MT@char globally (save stack problem)	85
Protrusion: harmonise dashes in upshape and italic (cmr, pad, ppl)	153	\MT@fdfimen: don't set \MT@count globally (save stack problem)	21
slanted like italics	165	\MT@setup@PDF: new message if \pdfoutput is changed	131
\MT@checklist@family: fix: don't try alias family name if encoding failed	43	\MT@use@set: don't use undeclared font sets	105
\MT@get@basefamily: fix: failed for font names of the			

2004/12/15

Version 1.5

General: defaults: step: 4 (suggested by <i>Hàn Thành</i>)	124	\MT@get@highlevel: don't test defaults if called after begin document	102
new option: selected, by default false (suggested by <i>Hàn Thành</i>)	122	\MT@scale@factor: warning for factors outside limits	48
Documentation: add 'Short history'	U32	\MT@scale@to@em: don't use \lpcode and \rpcode for the calculation	46
Inheritance: remove \ss from T1 list, add \DJ	146	\MT@set@ex@codes: allow non-selected font expansion	62
Protrusion: settings for Bitstream Charter	154	\MT@set@pr@codes: adjust protrusion factors before setting the inheriting characters	44
\DeclareMicrotypeAlias: remove spaces around arguments	106	\MT@setup@expansion: defaults: calculate step as min(stretch,shrink)/5	133
\MT@cfg@catcodes: reset catcode of '=' (compatibility with Turkish babel)	82	defaults: turn off expansion for DVI output	132
\MT@fix@catcode: reset catcode of '^' (compatibility with chemsym)	5	disable automatic expansion for DVI output	133

2005/01/24

Version 1.6

General: defaults: turn off expansion for old pdfTeX versions	126	tune CMR math letters (OML encoding)	189
load a font if none is selected	38	\MT@get@charwd: use e-TpX's \fontcharwd, if available	47
new option: factor, by default 1000	124	\MT@get@inh@list: correct message if selected is false	85
restructure dtx file	141	\MT@set@ex@codes: introduce factor option	62
test whether \pickup@font has changed	97	\MT@set@pr@codes: introduce factor option	44
test whether numeric options receive a number	124	\MT@setup@expansion: disable automatic expansion for old pdfTeX versions	134
use e-TpX's \ifcsname and \ifdefinable if defined	20	\MT@use@set: retain current set if new set is undeclared	105
Protrusion: add italic uppercase Greek letters	165	\MT@vinfo: new macro instead of \ifMT@verbose	6
improve settings for numbers (pointed out by Peter Muthesius)	156		

2005/02/02

Version 1.6a

Documentation: add table of fonts with tailored protrusion settings	U21	reported by <i>Bernard Gaulle</i>	85
\MT@get@slot: completely redone, hopefully more robust (compatible with frenchpro; problem		\MT@pdftex@no: new macro	14
		\MT@reset@ef@codes: only reset \efcodes for older pdfTeX versions	62

2005/03/23

Version 1.7

General: allow specification of size ranges (suggested by <i>Andreas Bühmann</i>)	102	\MT@get@slot: remove backslash hack	85
disallow automatic expansion if pdfTeX too old	114	test for \chardefed commands	86
fix: remove space after autoexpand	114	test whether \⟨encoding⟩\(... is defined	86
new value for verbose option: errors	124	\MT@if@list@exists: don't define \MT@pr@c@name etc.	
shorter command names	26	globally, here and elsewhere	84
warning when running in draft mode	131	\MT@ifdimen: comparison with 1 to allow size smaller than 1 (suggested by <i>Andreas Bühmann</i>)	21
Documentation: add hint about compatibility	U28	\MT@increment: use e-TeX's \numexpr if available	26
remove table of match order (now table 1 on page 83)	U11	\MT@is@composite: new macro: construct command for composite character; no uncontrolled expansion	92
Protrusion: fix: remove \ from OT1, add \textbackslash to T1 encoding	157	\MT@scale: new macro: use e-TeX's \numexpr if available	26
\LoadMicrotypeFile: new command (suggested by <i>Andreas Bühmann</i>)	107	\MT@set@ex@codes: two versions of this macro	62
\Microtype@Hook: new command for font package authors	127	\MT@split@name: don't define \MT@encoding &c.	
\microtypesetup: fix: warning also when setting to (no)compatibility	128	globally	41
\MT@begin@catcodes: also use inside configuration commands	82	\MT@test@ast: make it simpler	102
\MT@cfg@catcodes: reset catcode of ‘:’ (compatibility with french* packages)	82	\MT@try@order: always check for size, too (suggested by <i>Andreas Bühmann</i>)	83
\MT@DeclareMicrotypeAlias: may also be used inside configuration files	107	fix: also check for //⟨series⟩//⟨shape⟩// (reported by <i>Andreas Bühmann</i>)	83
\MT@get@listname@: use \ot for (<i>Andreas Bühmann</i> 's idea)	83	\MT@warn@code@too@large: new macro: type out maximum protrusion factor	48
		\MT@warn@err: new macro: for verbose=errors	6
		\showhyphens: modify \showhyphens	135

2005/06/23

Version 1.8

General: \SetProtrusion: new key: unit	113	\MT@find@file: no longer wrap names in commands	81
if font substitution has occurred, set up the substitute font, not the selected one	95	\MT@fix@fontdimen@six: new macro: test whether \fontdimen 6 is defined	41
new option: config to load a different main configuration file	126	\MT@get@charwd: warning for missing (resp. zero-width) characters	47
new option: unit, by default character	125	\MT@get@listname@: made recursive	83
Documentation: add example for factor option	U12	\MT@get@slot: fix: expand active characters	85
add example of how to get rid of a widow (suggested by <i>Adam Kucharczyk</i>)	U14	test whether \⟨encoding⟩\(... is defined made more robust	86
add hint about error messages	U28	\MT@get@unit: new macro: get unit for codes	49
Font aliases: declare pxr and txr as aliases of pp1 resp. ptm	143	\MT@in@list: made recursive	24
Font sets: add U encoding to allmath	141	\MT@is@active: new macro: translate inputenc-defined characters	89
Inheritance: remove \DJ from T1 list (it's the same as \DH)	146	\MT@is@letter: warning for non-ASCII characters	88
Protrusion: add LY1 characters for Times	163	\MT@ledmac@setup: character protrusion with ledmac	28
settings for AMS math fonts	193	\MT@map@clist@n: new macro: used instead of \otfor	23
verified settings for slanted Computer Modern Roman	175	\MT@map@tlist@n: new macro: used instead of \otfor	23
\add@accent: fix: disable micro-typographic setup inside \add@accent (reported by <i>Stephan Hennig</i>)	97	\MT@old@cmd: renamed commands from \..MicroType.. to \..Microtype..	6
\DeclareMicrotypeAlias: warning when overriding an alias font	106	\MT@pdftex@no: case 5: pdfTeX 1.30	14
\DeclareMicrotypeSetDefault: new command: set default font set	106	\MT@permute@00000: add ranges to the beginning of the lists	119
\MT@cfg@catcodes: reset catcodes of the remaining ASCII characters	82	\MT@scale: fix: remove spaces in e-TeX variant (reported by <i>Mark Rossi</i>)	26
\MT@check@list: made recursive	120	\MT@setupfont@hook: restore \% and \# when hyperref is loaded	30
\MT@curr@list@name: new macro: current list type and name	93	restore csquotes's active characters	30
\MT@declare@sets: warning when redefining a set	101	restore percent character if Spanish babel is loaded	30
\MT@define@set@key@: use comma lists instead of token lists	101	\MT@split@codes: get character width once only	45
		\MT@use@set: fix: remove braces in first line	105
		\MT@xadd: simplified	23

2005/10/28

Version 1.9

General: \DeclareMicrotypeSet: new key: font	104	settings for T5 encoded Computer Modern Roman	153
\SetProtrusion: value ‘relative’ renamed to ‘character’ for key unit	113	\DisableLigatures: new command: disable ligatures (requires pdfTeX 1.30)	107
allow context-specific font setup	95	\microtypecontext: new command: change setup context in the document	98
compatibility with TeX Live hack (reported by <i>Herbert Voß</i>)	13	\MT@checklist@family: fix: add two missing \expandafters	43
disable microtype setup inside hyperref’s \pdfstringdef (reported by <i>Hàn Thé Thành</i>)	31	\MT@detokenize@c: fix the eTeX version	20
fix: use true as the default value	121	\MT@exp@two@n: new macros: less \expandafters	19
option unit: rename value relative to character	125	\MT@get@opt: new key ‘preset’ to set all characters to the specified value before loading the lists	49
Documentation: add remark about Type 1 fonts required for automatic font expansion	U7	\MT@is@active: redone: use \set@display@protect	89
Font aliases: declare qpl and qtm (qfonts, TeX Gyre) as aliases of ppl resp. ptm	143	\MT@is@letter: using \catcode should be more efficient than inspecting the \meaning	88
Font sets: add OT4 encoding to text sets	141	\MT@maybe@do: redone	42
add T5 encoding to text sets	141	\MT@rem@from@clist: new macro: remove an item from a comma list	24
Inheritance: add list for OT4	147	\MT@scale@factor: generalised	48
add list for T5 (requested by <i>Hàn Thé Thành</i>)	149	\MT@setup@expansion: disable expansion if both step and shrink are zero	134
Protrusion: fix: remove uppercase Greek letters from T1 encoded CMR	157	warning if user requested zero step	133
settings for OT4 encoding (Computer Modern Roman, Palatino, Times)	153	\MT@toks: use instead of \toks@	16
\SetProtrusion: (et al.) new key: font	108	\SetProtrusion: (et al.) new key: font	108

2005/12/05

Version 1.9a

General: ‘ <i>file name</i> ’/‘ <i>line number</i> ’ as default list name	112	diately (requested by <i>Georg Verwegen</i>)	101
new option: defersetup, by default true	123	\MT@get@highlevel: no longer check whether defaults have changed	102
remove superfluous test whether \pickup@font has changed	97	\MT@ifdefined@c@T: new macros: true case only	20
Documentation: add explanation for error message in DVI mode	U29	\MT@ifint: use \pdfmatch if available	21
add explanation for error message with non-Type 1 fonts	U30	\MT@ifstreq: use \pdfstrcmp if available	22
Font aliases: declare mdbch (mathdesign) as an alias of bch	144	\MT@in@clist: fix	24
Protrusion: fix: remove ‘_’ from OT1 encoding	159	\MT@info@missing@char: info instead of warning (after <i>Michael Hoppe</i> reported that the ‘fl’ ligature is missing in Palatino SC)	48
settings for T5 encoded Charter	153	\MT@is@feature: new macro: check for pdfTeX feature	27
\microtypesetup: inside the preamble, accepts all package options	128	\MT@map@clist@n: following LATEX3	23
\MT@check@font@cx: optimise context-sensitive setup	98	\MT@permute@0@0@0: don’t define permutations for unused encodings	118
\MT@define@set@key@: don’t expand variables imme-		\MT@rem@from@clist: fix	24
		\MT@setup@: defer setup until the end of the preamble	28

2006/01/20

Version 1.9b

General: compatibility with listings: sanitise more catcodes (reported by <i>Holger Uhr</i>)	32	add samples of micro-typographic features	U3
compatibility with the extendedchar option of the listings package	32	\MT@features: use throughout the package to adjust to beta-ness	27
Documentation: activate expansion in the distributed PDF	U1	\MT@ifdimen: use \pdfmatch if available	21
		\MT@warn@code@too@large: fix calculation with present factor	48

2006/02/02

Version 1.9c

Documentation: add example of how to increase protrusion of footnote markers (suggested by <i>Georg Verwegen</i>)	U22	\MT@define@code@key@font: fix: context was ignored	111
Protrusion: settings for URW Garamond	155	\MT@define@code@key@size: fix: embrace \MT@tempsize in \csname (bug introduced in v1.9b)	111

2006/05/05

Version 1.9d

Font sets: md* instead of m series in basic sets	141	\MT@get@font@dimen: warning for zero fontdimen	47
add QX encoding to text sets	141	\MT@get@opt: optimise: don't reset when preset option is set	49
Inheritance: add list for QX encoding (contributed by Maciej Eder)	148	set list name before presetting	49
Protrusion: settings for QX encoding (contributed by Maciej Eder)	162	\MT@is@active: support for Unicode (inputenc/utf8)	89
settings for Euro symbols (Adobe, ITC, marvosym)	200	\MT@setupfont@hook: restore \% and \# when tex4ht is loaded (reported by Peter Dybulla)	30
tweak AMS settings	193	\SetProtrusion: (et al.) optimise: unify keys for mandatory argument	108
\DeclareCharacterInheritance: fix: empty context	115	(et al.) split keys of optional and mandatory argument	108
\MT@detokenize@n: new macro: use \detokenize if available	20		
\MT@get@ex@opt: fix: evaluate preset	63		

2006/07/28

Version 1.9e

General: fix: default value for activate: true	122	settings for Euler Roman font	196
Documentation: add hint about unknown encodings include LPPL	U27 274	\DeclareCharacterInheritance: new key 'inputenc' to set the input encoding	115
Font aliases: declare zeur and zeus (eu1ervm) as aliases of eur resp. eus (euler)	144	\MT@rem@from@clist: model after \removeelement	24
Inheritance: adapt to marvosym's changed encoding	151	\MT@setup@: empty \MT@setup@ after use (compatibility with the combine class)	28
Protrusion: complete settings for Euler Fraktur and Script fonts	200	\pickup@font: no tracing with trace package	96
fix: forgotten comma in mt-mvs.cfg; adapt to marvosym's changed encoding	200	\SetExpansion: new key: inputenc	109
		\SetProtrusion: (et al.) new key: inputenc	108

2006/09/09

Version 1.9f

Protrusion: fix: euler-vm did not load euler settings	197	\MT@reset@context: only reset context if it has actually been changed	99
\MT@curr@list@name: fix: \MessageBreak must not be expanded	93	\MT@set@inh@list: fix: forgotten comma in the features list	116
\MT@gdef@n: new macros: global variants	19	\MT@set@named@keys: new macro: set name first, simplify parsing of optional argument	110
\MT@get@inh@list: fix: input encoding must be set after the inheritance list has been parsed	85	\SetProtrusion: (et al.) set catcodes before parsing optional argument	108
\MT@glet: new macro	19		

2007/01/14

Version 2.0

General: compatibility with listings: set catcode of backslash to zero (reported by Steven Bath)	32	<i>Miatidis</i>)	U8
compatibility with soul: register \textls and \lsstyle	32	qualify hint about web documents with regard to older pdfTeX versions	U27
new option: babel, by default false (language-dependent setup suggested by Ulrich Dirr)	122	qualify hints about expansion error messages with regard to older pdfTeX versions	U29
new option: letterspace, by default 100	124	Font sets: new: footnotesize and scriptsize	141
new package letterspace: a stripped-down version, containing the letterspacing commands only	U1	new: smallcaps	141
option 'babel': fix: switch off French babel's short-hands properly (reported by Daniel Flipo)	139	\DeclareMicrotypeBabelHook: new command: interaction with babel	108
option 'babel': switch off Turkish babel's short-hands	139	\lsstyle: fix: font switches don't pose a problem anymore	72
option 'unit', \SetProtrusion: deprecate value 'relative' completely	113	fix: letterspacing commands may be nested	72
Documentation: add hint about how to increase font_max and font_mem_size	U30	new command: letterspacing	72
add hint about warning when tracking and expansion is applied to a font	U30	totally redone, using the new \letterspacefont	72
add remark about 'disable' (previously draft) option disabling microtype (noted by Michalis		\MT@declare@sets: fix: empty size list when redefining set	101
		\MT@is@symbol: made even more robust	91
		\MT@load@inputenc: sanitise catcodes before loading input encoding (problem with listings)	50
		\MT@pdftex@no: case 6: pdfTeX 1.40	14
		\MT@setup@noligatures: maybe disable \MT@noligatures after the preamble	138

\MT@split@name: adjust to possible letterspacing	41	\SetTracking: new command: tracking	109
\SetExtraKerning: new command: additional kerning	110	\textls: new command: letterspacing	77
\SetExtraSpacing: new command: adjustment of interword spacing	110	starred version: remove spaces around text	77
		\tracingmicrotypeinpdf: new debug method: mark all fonts with PDF annotations	7

2007/01/21 **Version 2.1**

General: compatibility with pinyin: disable microtype in \py@macron (reported by <i>Sven Naumann</i>)	32	\MT@get@ls@basefont: redone: use \pdfmatch to make it bullet-proof	73
fix: letterspace package forgot to load keyval	16	\MT@orig@pickupfont: compatibility with CJK: also check for its definition	95
\lslig: new command: protect ligatures in letter-spaced text	73	\textls: fix: use \hmode@bgroup	77

2007/07/14 **Version 2.2**

General: disable microtype if wordcount is loaded (reported by <i>Ross Hetherington</i>)	27	\MT@is@composite: more robust: expand exactly once	92
new option: copyfonts	123	\MT@is@symbol: expand once more (for frenchpro)	91
simplify key declarations	112	\MT@lsfont: use \font@name, not \MT@font	67
use catcode trickery for e-T _E X test	13	\MT@lua: (basic) support for LuaT _E X	16
Documentation: add hint about error message with pdfT _E X 1.40	U29	\MT@pdftex@no: case 7: pdfT _E X 1.40.4	14
add hint about extra TOC leader dot (first discovered by <i>Morten Høgholm</i>)	U27	\MT@preset@aux@space: generalised	52
add overview	U4	\MT@set@all@pr: (et al.) allow empty values	45
logo transparency and amusement	U1	\MT@set@inputenc@: only load inputenc files if necessary	50
Font aliases: declare chr (chmath) as an alias of bch (reported by <i>Geoff Vallis</i>)	144	\MT@set@tr@codes: disable ligatures in letterspaced fonts manually (due to change in pdfT _E X 1.40.4)	68
declare fp9x, fp9j (FPL Neu) as aliases of ppl[xj]	143	possibility to customise interword spacing	68
Font sets: default set for tracking: smallcaps	142	\MT@setup@expansion: warning if stretch or shrink aren't multiples of step	135
Inheritance: remove '-' → '127'	147	\MT@setupfont: don't call \@@enc@update anymore	38
Protrusion: settings for Bitstream Letter Gothic	154	only add features that are available with the respective pdfT _E X	38
Spacing: add sample	201	\MT@setupfont@hook: restore percent character if Galician babel is loaded	30
Tracking: add ligatures that are to be disabled	151	\MT@the@pr@code@tr: adjust protrusion of letter-spaced fonts	45
\DeclareMicrotypeVariants: new command	106	\MT@tracking: remember fonts that shouldn't be letterspaced	67
\DisableLigatures: new optional argument: disable selected ligatures only	107	\MT@tracking@: fix: tracking couldn't be re-enabled	67
\lslig: always defined	73	\MT@warn@tracking@DVI: warning when letterspacing in DVI mode	137
\MT@checklist@font: fix: construct font name from characteristics	43	\MT@with@babel@and@T: also inspect class options	28
\MT@copy@font: optionally work on copies of fonts	39	\pickup@font: letterspace: setup inside group	96
\MT@get@basefamily: redone, working on font names and suffixes of arbitrary length	83	\SetTracking: new key 'no ligatures' to disable ligatures of letterspaced fonts	109
\MT@get@charwd: subtract letterspacing amount from width	47	new keys 'spacing' and 'outer spacing' to adjust interword spacing (suggested by <i>Steven E. Harris</i>)	109
\MT@get@ls@basefont: fix again: remember base font in a macro	73	third argument may be empty	109
\MT@ifdimen: employ LuaT _E X features if available	21	\textmicrotypecontext: new command: wrapper around \microtypecontext	99
\MT@ifint: employ LuaT _E X features if available	21		
\MT@ifstreq: employ LuaT _E X features if available	22		
fix: e-T _E X version shouldn't use \x and \y (found by <i>Wiebke Petersen</i>)	22		

2007/12/23 **Version 2.3**

General: disable \microtypecontext in hyperref's \pdfstringdef	31	Documentation: add kerning sample	U18
fix: really switch off Turkish shorthands	139	add letterspacing illustration	U16
new value for verbose option: silent (suggested by <i>Karl Berry</i>)	124	\do@subst@correction: remember substitute font for all times (reported by <i>Stephan Hennig</i>)	97
turned some warnings into errors	124	\lslig: redone: extract outer kerns from current letterspacing amount	73

\microtypecontext: made robust (reported by Stephan Hennig)	98	\MT@set@curr@os: adjusting spaces made more reliable	69
\MT@begin@catcodes: fix: don't disable \KV@sp@def	82	\MT@set@tr@codes: also adjust tracking if protrusion is not enabled, and even for letterspace (reported by Stephan Hennig)	69
\MT@define@set@key@font: font: single asterisk means normal font	104	possibility to customise outer kerning (suggested by Stephan Hennig)	68
\MT@in@clist: don't use \x (reported by Peter Meier)	24	\MT@SetTracking: sanity check for value	109
\MT@is@active: support for extended Unicode (inputenc/utf8x resp. ucs) – experimental	89	\MT@setup@tracking: enable protrusion when tracking is enabled	136
\MT@no@ligatures: fix: set evaluation didn't work (bug introduced in v2.2)	79	\MT@tr@outer@l: only change pre outer space if it contains shrink	75
\MT@plain: letterspace: support for eplain/miniltx	12		

2008/02/29

Version 2.3a

General: fix test for soul under plain TeX	32	\MT@fix@catcode: fix catcodes earlier, and also for the letterspace package	5
Documentation: add hint about babel having to be loaded first	U28	\MT@getkey: fix: key=val in class options list	131
add table of available and enabled features	U6	\MT@set@codes: generalised	45
Protrusion: adjust LMR quotation marks again	160	\MT@setupfont@hook: restore percent character if Mexican babel is loaded	30
\MT@error@doesnt@work: error messages if pdfTeX is too old for extensions	137		

2008/06/04

Version 2.3b

\MT@exp@gcs: new macro: reduce save stack size	19	also check for its definition	95
\MT@font@copy: enable font copies also with protrusion contexts (reported by Nathan Rosenblum)	39	\MT@requires@latex: new macro	13
\MT@get@size@{@}: grouping	103	\MT@set@tr@codes: fix: protrusion adjustment only for new fonts (reported by Wolfram Schaalo)	69
\MT@no@ligatures@{@}: fix: warning messages for unknown slots	79	\MT@tr@outer@l: fix: only in horizontal mode	75
\MT@orig@pickupfont: compatibility with CJKutf8:		make \spaceskip-aware (ragged2e)	75
		\MT@tr@outer@r@{@}: additional test for horizontal mode	76

2008/11/11

Version 2.3c

General: LuaTeX supported by default	15	coding (reported by Vasile Gaburici)	148
Documentation: add hint about spacing being experimental	U28	\MT@detokenize@{@c: fix: remove last space only (reported by Ulrich Dirr)	20
add hint about partial incompatibility with CJK	U28	\MT@tr@outer@r@{@r@{@}: additional test for horizontal mode (reported by Sveinung Heggen)	76
Inheritance: add \textcommabelow[STst] to QX en-			

2009/03/27

Version 2.3d

General: fix pinyin compatibility check (reported by Silas S. Brown)	32	(reported by Ulrich Dirr)	73
move setup to the very end (for Colin Rourke)	140	\MT@setup@expansion: default step: 1 for pdfTeX versions ≥ 1.40	133
\ifMT@inannot: use pdftexcmds for debugging	7	\MT@tr@outer@r@{@r@{@}: don't use \x (reported by Ulrich Dirr)	76
\lsstyle: disable for LuaTeX	72	fix: don't adjust in math mode (reported by Christoph Bier)	76
make invalid in math mode	72	fix: don't adjust inside discretionary (reported by Maverick Woo)	76
\microtypesetup: select font after setup	128	\MT@tr@set@okern: allow empty value for outer kerning	78
\MT@check@active@set: warning for missing default sets	127	\textls: make math mode aware	77
\MT@lua: update for LuaTeX 0.36	16		
\MT@set@tr@codes: allow zero tracking	67		
\MT@set@tr@zero: fix: allow switching off tracking			

2009/11/09

Version 2.3e

Expansion: settings for T2A encoding (contributed by Karl Karlsson)	152	add T2A encoding	141
Font sets: sc* instead of sc in smallcaps set	141	Protrusion: settings for T2A encoding (contributed by Karl Karlsson)	161

Spacing: settings for T2A encoding (contributed by Karl Karlsson)	203
\MT@fix@fontdimen@six: fix: gobbling settings with tracking failed (reported by Leo)	41
\MT@setup@: make space-unaware (requested by Mar-	

cin Borkowski)	28
\MT@tikz@setup: compatibility with tikz (first reported by Christian Stark)	30
\MT@tr@outer@r@: fix: set current kerning and spacing again (found by Lars Rönnbäck)	76

2010/01/10 **Version 2.4**

General: new file <code>microtype.lua</code> containing the <code>lua</code> functions (contributed by Élie Roux)	18
--	----

Protrusion: settings for T2A encoded Minion (contributed by Karl Karlsson)	161
--	-----

2013/03/13 **Version 2.5**

General: allow contexts for LuaTeX	112
disable ‘DVIoutput’ option for XeTeX	123
fix: check whether ‘ <code>(file)/(line)</code> ’ list name already exists (reported by Till A. Heilmann)	112
letterspacing with LuaTeX 0.62	66
new files: <code>microtype-pdftex.def</code> , <code>microtype-xetex.def</code> , <code>microtype-luatex.def</code> , containing engine-specific definitions	13
protrusion with XeTeX	15
restore \space inside listings (reported by Rolf Dieterich)	32
Documentation: add hint about LuaTeX compatibility	U28
add hint about spacing and ragged2e	U28
add hint about dtx source code	U30
include <code>microtype-logo.dtx</code> and <code>microtype-lssample.dtx</code>	239
Font aliases: declare <code>lmsy</code> and <code>lmm</code> as aliases of <code>cmsy</code> resp. <code>cmm</code> (reported by Jonas Hogstrom)	142
declare <code>zgmx</code> etc. (<code>garamondx</code>) as aliases of <code>ugm</code> .	144
declare Latin Modern Roman (OpenType version) as alias of <code>lmr</code> when fontspec is loaded	142
declare TeX Gyre Pagella, Asana Math, Palatino LT Std, and Palatino as aliases of Palatino Linotype (OpenType version)	143
Font sets: add EU1 and EU2 encodings	141
Inheritance: add rudimentary list for EU1 and EU2	149
Protrusion: add default lists for EU1 and EU2	159
improvements to Computer Modern Roman italics (contributed by Hendrik Vogt)	165
Tracking: add EU2 encoding to default list	151
\DeclareCharacterInheritance: allow more than one encoding	115
\DeclareMicrotypeAlias: ignore spaces	106
\ifMT@nofamily: info if settings are not family-specific (suggested by Hán Thé Thành)	44
\LoadMicrotypeFile: remove all spaces in font name	107
\lsstyle: fix: ensure to set up math fonts (reported by RazorXsr)	72

\MT@define@code@key@family: compatibility with <code>fontspec</code> : remove its internal counter (reported by Till A. Heilmann)	111
\MT@define@code@key@font: scrub <code>fontspec</code> feature count (found by Meho R)	111
\MT@do@font: adapt for LuaTeX	25
adapt for XeTeX	26
\MT@get@slot@: adapt for LuaTeX (requested by Georg Duffner)	86
adapt for XeTeX	86
\MT@if@outer@next: fix: conflict with amsmath (reported by Scott Pakin)	76
\MT@info@missing@char: fix error message for XeTeX (reported by Juan Acevedo)	48
\MT@is@charx: compatibility with xunicode	92
\MT@ledmac@setup: fix to work with XeTeX (reported by Maïeul Rouquette)	28
\MT@s@set@l: allow formulas in optional argument to \textl (fix by Heiko Oberdiek)	78
\MT@microtypecontext: fix: ensure to set up math fonts (reported by RazorXsr)	99
\MT@register@subst@font: only register substituted font if it isn’t registered already (reported by George Gratzer and Josep Maria Font)	97
\MT@register@subst@font@cx: only register if it isn’t registered already	98
\MT@scrubfeatures: compatibility with <code>fontspec</code> : remove its internal counter	41
\MT@set@all@pr: fix: remove space (found by Meho R)	45
\MT@set@pr@codes: make info about generic settings encoding-specific (reported by Sebastian Schubert)	44
\MT@setup@spacing: warning with ragged2e (reported by Steffen Hoffmann)	136
\MT@setupfont: select font with <code>fontspec</code> (found by Georg Duffner)	38
\MT@setupfont@hook: restore \% and \# when <code>mathastext</code> is loaded (found by Seamus Bradley)	30

2013/05/23 **Version 2.5a**

General: use <code>luatexbase</code> instead of <code>luatextra</code> (con- tributed by Élie Roux)	18
Documentation: add notes on typesetting the docu- mentation	U30
include OpenType configuration files	207
\MT@afteraftergroup: fix: get outer kerning and spacing of nested letterspacing right	70
\MT@get@slot@: adapt to <code>luatfload v2.2</code> (contrib- uted by Élie Roux)	87

\MT@led@unhbox@line: simplified	28
\MT@ledmac@setup: support for elemac	28
\MT@s@outer@k: add marker for tightly nested letter- spacing	79
\MT@set@pr@codes: fix: load font for <code>fontspec</code>	69
\MT@xspace: fix outer spacing problem with <code>xspace</code> (reported by Dave)	77

2016/05/01 **Version 2.6**

General: load <code>luatofload</code> with LuaTeX	18	\MT@engine: fix test with LuaTeX 0.85	13
redefine \MT@setupfont@hook globally for problem		\MT@get@slot@: fix: could fail with XeTeX (reported	
with <code>tikzposter</code> (reported by <i>Sam Mason</i>)	31	by <i>Christopher Schramm</i>)	86
Documentation: add hint about partial incompatibil-		\MT@is@xchar: update for <code>fontspec</code> 's TU encoding .	92
ity with xeCJK and <code>luatexja</code>	U28	\MT@ledmac@setup: support for <code>reledmac</code>	28
missing characters printed with Charis SIL	207	\MT@luatex@no: update for LuaTeX 0.85 (renamed	
Font sets: add TU encoding (notified by <i>Will</i>		primitives)	15
<i>Robertson</i>)	141	\MT@noligatures@: use <code>luatofload</code> function to keep/	
add <code>si</code> and <code>scit</code> to <code>smallcaps</code> set (reported by <i>uli</i>)	141	inhibit ligatures	80
new: <code>allmath-nott</code> and <code>alltext-nott</code> (suggested		\MT@orig@pickupfont: (in)compatibility with	
by <i>Karl Berry</i>)	141	<code>luatexja</code> : disable unknown slots warnings (re-	
Inheritance: add TU encoding	149	ported by <i>Max</i>)	95
Protrusion: add TU encoding to lists	159	(in)compatibility with xeCJK: disable unknown	
Tracking: add TU encoding to default list	151	slots warnings (reported by <i>HcN</i>)	95
\DeclareMicrotypeSet: ignore spaces	100	compatibility with xeCJK: pretend that CJK wasn't	
\DeclareMicrotypeSetDefault: ignore spaces	106	loaded	95
\DeclareMicrotypeVariants: ignore spaces	106	\MT@set@tr@codes: use <code>luatofload</code> 's kernfactor fea-	
\lsstyle: fix: ensure to set up math fonts (reported		ture if available	68
by <i>kleenstar</i>)	72	\MT@xspace: fix outer spacing problem with (not	
\microtypecontext: allow activate shortcut (repor-		only) algorithm (reported by <i>Henning</i> and <i>Ron-</i>	
ted by <i>Karl Berry</i>)	98	<i>nie Marksch</i>)	77
\MT@declare@sets: fix: undefine lists for redefining	101	\UseMicrotypeSet: ignore spaces	105
\MT@do@font: speed up for LuaTeX	25		

2016/05/14 **Version 2.6a**

General: fixes for <code>letterspace</code> package with LuaTeX	25	Voß)	25
\MT@do@font: fix <code>lua</code> function (reported by <i>Herbert</i>		\MT@ls@fontspec@font: fix for value of ± 1000	70

2017/07/07 **Version 2.7**

General: drop <code>luatexbase</code> with recent LATEX	18	\MT@check@range@: don't warn for override if conflict-	
warning with <code>minimal</code> class	27	ing list is loaded	120
Documentation: mention that additional kerning does		\MT@is@composite: compatibility with LATEX	
not work in math mode (discovered by ' <i>Daniel</i> ')	U17	2017/01/01 (<code>\DeclareUnicodeComposite</code>) (re-	
Font aliases: declare aliases for <code>newpx</code>	143	ported by <i>Ulrike Fischer</i> and ' <i>jcr</i> ')	92
declare aliases for <code>newtx</code>	143	\MT@ls@fontspec@font: fix for 'file:(font)' spec (re-	
declare aliases for <code>tempora</code>	143	ported by <i>Reinhard Kotucha</i>)	70
declare aliases for <code>XCharter</code>	144	\MT@permute@00000: don't warn for override if con-	
declare Latin Modern Roman as alias of <code>lmr</code> with		flicting list is loaded	119
new LATEX format (reported by <i>Ulrike Fischer</i>)	142	\MT@reset@ef@codes: only reset <code>\efcodes</code> for older	
Protrusion: automatically choose correct names for		LATEX versions	62
Charis SIL small caps (reported by ' <i>ltcomdata</i> ')	228	\MT@setup@expansion: don't disable automatic expan-	
\lsstyle: fix: prevent infinite loop with <code>psnfss</code> and		sion for DVI output with LuaTeX	133
<code>exscale</code> packages (reported by <i>user11126</i> , solu-		\MT@tikz@setup: compatibility with <code>tikz</code> (again) . .	30
tion by <i>Ulrike Fischer</i>)	72	\MT@warn@tracking@DVI: don't warn for letterspacing	
		in DVI mode with LuaTeX	137

2018/01/14 **Version 2.7a**

General: disallow non-automatic expansion with		\MT@get@highlevel: test whether <code>\...default</code> is	
LuaTeX	114	defined	101
\MT@auto: remove 'autoexpand' for LuaTeX 1.0.6 (re-		\MT@get@slot: expand active characters earlier . . .	85
ported by <i>Ulrike Fischer</i>)	133	\MT@info@notracking@: defer 'No tracking' message	42
with LuaTeX, non-automatic font expansion is no		\MT@is@active: compatibility with <code>newunicodechar</code>	
longer possible (as confirmed by <i>Hans Hagen</i>)	133	(reported by <i>Nils Anders Danielsson</i>)	90

2019/02/28

Version 2.7b

General: update lua function <code>microtype.info</code> after changes in <code>luaotfload</code> (reported by <i>Moritz Wemheuer</i> and <i>Ulrike Fischer</i>)	18	(reported by <i>Franz Wexler</i>)	147
Documentation: update hint about non-7-bit characters (notified by <i>Frank Mittelbach</i>)	U28	<code>\MT@info@missing@char</code> : fix message for glyphs specified as names in $X\!T\!\!E\!X$ (reported by <i>Paolo Ney</i>)	48
Inheritance: add <code>textquotedblleft</code> ligature to OT4		<code>\MT@setupfont</code> : always select current font with $X\!T\!\!E\!X$ and $\text{Lua}\!T\!\!E\!X$ (reported by <i>Paolo Ney</i> , solution by <i>Ulrike Fischer</i>)	38

2019/10/10

Version 2.7c

General: turn warning into info when overwriting the <code>keepligature</code> function (reported by <i>Andy N.</i>)	80	<code>\MT@is@symbol</code> : take care of <code>\remove@tlig</code>	91
<code>\MT@is@active</code> : compatibility with \LaTeX 2019/10/01	89	<code>\showhyphens</code> : compatibility with \LaTeX 2019/10/01 (reported by <i>Phelype Oleinik</i> and <i>Falk Hanisch</i>)	135

2019/11/18

Version 2.7d

<code>\MT@copy@font@</code> : in $\text{Lua}\!T\!\!E\!X$, don't use the <code>\copyfont</code> primitive, but load the font anew (reported by <i>Paolo Polesana</i> and <i>Oliver Kopp</i>)	40	<code>\MT@is@symbol</code> : from list (reported by <i>Markus Kohm</i>)	97
<code>\MT@register@subst@font</code> : remove substitute font		<code>\MT@register@subst@font@cx</code> : remove substitute font from lists	98

2020/12/07

Version 2.8

General: <code>letterspace</code> works with e- \TeX only	13	<code>\lsstyle</code> : fix: enforce math setup, again	72
compatibility with <code>soul</code> : patch for font change (reported by <i>Md Ayquassar</i>)	32	<code>\microtypecontext</code> : fix activate shortcut	98
fix for <code>luatexbase</code>	18	ignore spaces	98
Documentation: declare DVI \output option deprecated	U8	<code>\MT@do@font</code> : fix for $X\!T\!\!E\!X$	26
squash fake news about automatic font expansion with <code>dviulatex</code>	U7	simplify lua function	25
Font aliases: declare aliases for <code>step</code> and <code>domitian</code> (notified by <i>Daniel Benjamin Miller</i>)	143	<code>\MT@fix@fontdimen@six</code> : try to fix zero <code>\fontdimen6</code>	41
declare aliases for <code>stix</code> and <code>stix2</code> fonts	144	<code>\MT@if@opentype@font</code> : use lua function	25
declare New Computer Modern as an alias of Latin Modern Roman	143	<code>\MT@if@fstreq</code> : use $X\!T\!\!E\!X$'s <code>\strcmp</code>	22
Font sets: default set for expansion: <code>alltext-nott</code> (suggested by <i>Aman Mehra</i>)	142	<code>\MT@setup@expansion</code> : warning when expanding in DVI mode with $\text{Lua}\!T\!\!E\!X$ (reported by <i>Daniel Benjamin Miller</i>)	132
default set for spacing: <code>alltext-nott</code>	142	<code>\MT@tr@set@space@</code> : simplified	74
		<code>\MT@tr@unit@</code> : fix: allow unit regardless whether letterspacing is set	71
		<code>\textmicromicrotypecontext</code> : ignore spaces	99

2021/02/22

Version 2.8a

General: rename <code>mt-pad.cfg</code> to <code>mt-EBGaramond.cfg</code> (requested by <i>Karl Berry</i>)	141	Inheritance: specify 'ff' ligature as Unicode instead of glyph name	207
rename <code>mt-PalatinoLinotype.cfg</code> to <code>mt-Palatino.cfg</code> (requested by <i>Karl Berry</i>)	207	Protrusion: hide euroitc settings (requested by <i>Karl Berry</i>)	200
Documentation: reorganise table 1 for clarification (suggested by <i>Daniel Benjamin Miller</i>)	U6	Spacing: add dummy settings (reported by <i>DORrapst</i>)	204
Font aliases: add <code>-LF</code> , <code>-TLF</code> , <code>-OsF</code> and <code>-ToSF</code> as variants	142	<code>\DeclareCharacterInheritance</code> : skip settings for tracking	115
declare <code>mlmodern</code> fonts as aliases of Latin Modern (reported by <i>Daniel Benjamin Miller</i>)	142	<code>\MT@get@size@</code> : compatibility with <code>svjour3</code> (reported by <i>Ekkehart Schlicht</i> (no relation!))	104
reference New Computer Modern also by file name (reported by <i>Canageek</i>)	143	<code>\MT@glet</code> : use $\text{Lua}\!T\!\!E\!X$'s <code>\glet</code> , if available	19

2021/02/25

Version 2.8b

Inheritance: dummy settings for the Font Awesome font (<code>mt-FontAwesome.cfg</code>)	215	settings for the Lato font (<code>mt-Lato.cfg</code>) (reported by <i>dsedivec</i>)	215
---	-----	--	-----

2021/03/14 **Version 2.8c**

\ifMT@fontspec: add to hook for fontspec	30	\MT@remove@tlig: fix for text commands containing conditionals (reported by <i>Frank Mittelbach</i>)	92
\MT@is@opt@char: fix for optionally defined glyphs (reported by <i>Frank Mittelbach</i>)	91		

2021/10/31 **Version 3.0**

General: letterspace loads microtype.lua	18	Protrusion: LGR settings for EB Garamond	164
compatibility fix for unicode-math with luainputenc (reported by <i>tnull</i>)	33	fix quotation marks in LMR	216
move development to GitHub	U1	settings for EB Garamond (OpenType)	229
new option: disable, replacing the draft option (suggested by <i>Frank Mittelbach</i>)	124	settings for EB Garamond figure variants	158
new options: patch and nopatch	125	settings for EB Garamond small caps italics	183
new package: microtype-show for visual debugging	8	settings for New Computer Modern (provided by <i>Antonis Tsolomitis</i>)	216
protrusion patch for TOC	35	\ifMT@fontspec: fix for changed hook name order (reported by <i>Frank Mittelbach</i> and <i>Karl Berry</i>)	30
protrusion patch for \item	34	\leftprotrusion: new command	52
protrusion patch for equation numbers (provided by <i>Holger Gerhardt</i>)	35	\MT@do@font: guard against return values outside Unicode range (for HarfBuzz)	25
protrusion patch for footnote text	36	\MT@get@slot@: convert floats to integers (reported by <i>azur</i>)	88
remove option final	124	guard against return values outside Unicode range (for HarfBuzz)	88
require package etoolbox (for patch option)	16	\MT@has@inh@prefix: new: automatical protrusion based on char widths difference (suggested by <i>Daniel Benjamin Miller</i>)	117
Documentation: split up in User manual (microtype.pdf) and Implementation doc (microtype-code.pdf)	U1	\MT@is@opt@char: fix for incompatibility with syntax (reported by <i>Safron</i>)	91
add hint about unknown slot numbers	U29	\MT@ls@fontspec@font: use lua to parse font spec/ fix for font spec containing spaces (reported by <i>Aman Mehra</i>)	70
remove hint about extra TOC leader dot (fixed in L ^A T _E X)	U27	\MT@old@cmd: old command names will raise an error	6
remove hint about web documents with pre-1.40 pdf _T E _X (it's been 14 years ...)	U27	\MT@pdfTeX@no: case 8: pdf _T E _X 1.40.23	14
rename option draft to disable (insistently requested by <i>Frank Mittelbach</i>)	U8	\MT@set@inh@list: fix: grouping with \begingroup ... \endgroup instead of {...} (reported by <i>chsk</i>)	115
split up table of fonts with tailored protrusion settings	U22	\MT@set@tr@codes: with Lua _T E _X , tracking also works for fonts with a zero \fontdimen6	67
Font aliases: declare basic alias for Bergamo Std .	144	with pdf _T E _X 1.40.23, tracking also works for fonts with a zero \fontdimen6	67
declare basic aliases for the Fontin font	144	\noprotrusion: provide command for older L ^A T _E X versions	52
declare empty aliases for fontawesome5	145	\rightprotrusion: new command	53
New Computer Modern has its own settings	143		
Inheritance: add settings for LGR	150		
generalise basic inheritance settings	215		
generalise empty settings	215		
settings for EB Garamond (OpenType)	211		
settings for New Computer Modern (provided by <i>Antonis Tsolomitis</i>)	207		

2021/12/02 **Version 3.0a**

General: abort earlier if no capable engine found	16	\MT@apply@patch: compatibility with babel/spanish: fix catcodes	34
allow \microtypesetup{(no)patch=all}	130	\MT@get@prot: compatibility fix for csquotes (reported by <i>Gustavo Barros</i>) [issue #1]	53
define function math.tointeger for older Lua _T E _X versions	18	reset counters	53
fix protrusion patch footnote with KOMA classes (reported by <i>MisterFiLou</i>) [issue #2]	37	set penalties to zero and vfuzz to max (reported by <i>florian</i>)	53
fix protrusion patch footnote with hyperref (reported by <i>Liang-Bo Wang</i>) [issue #2]	37	\MT@prot@addgroup: reread grouped material to allow verbatim etc. (reported by <i>Torsten Schuetze</i>)	55
protrusion patch eqnum for IEEETran	35	\MT@redefine@patch: facilitate redefinition of patches	33
Font aliases: declare CMU Serif as an alias of New Computer Modern	143	\MT@with@babel@and@T: fix grouping	28

2021/12/10 **Version 3.0b**

General: disable patches for <code>tex4ht</code>	31	by Akira Yoskawa and <i>theufman</i>) [issues #3, #4]	55
<code>\MT@get@prot</code> : unconditionally <code>\leavevmode</code>	53	<code>\MT@prot@1@</code> : make <code>\long</code> again (reported by Akira Yoskawa) [issue #3]	52

2022/02/22 **Version 3.0c**

General: info that protrusion patch <code>eqnum</code> may not be effective with <code>mathtools</code> (reported by <i>user182849</i>)	36	<code>\MT@noindent</code> : use <code>\RawNoindent</code> , if available [issue #8]	53
make <code>babel</code> option work with <code>polyglossia</code>	139	<code>\MT@prot@iffirstcmd</code> : use <code>\long</code> variant of <code>\@car</code> (reported by <i>frafl</i>) [issue #6]	54
protrusion patch footnote: also for <code>minipages</code> ..	36	<code>\MT@prot@1@</code> : next try at removing <code>\long</code>	52
<code>\MT@csq@eqgroup</code> : compatibility with <code>csquotes</code> , again (reported by <i>NightShade</i>)	53	<code>\MT@prot@r</code> : no longer <code>\long</code>	53
		<code>\noprotorusionifhmode</code> : new command	52

2022/03/14 **Version 3.0d**

<code>\1slig</code> : define <code>\font@name</code> (reported by <i>Ulrike Fischer</i>) [issue #12]	73	<i>Brian Dunn</i> [issue #14]	53
<code>\MT@get@prot</code> : no longer reset counters (reported by		<code>\MT@prot@addgroup</code> : no brace delimiting (reported by <i>Nelson Lago</i>) [issue #10]	55

2022/06/20 **Version 3.0e**

General: disable <code>csquotes</code> 's grouping control for <code>\leftprotrusion</code> (reported by <i>Ralf Steinle</i> and <i>Denis Bitouzé</i>)	31	<code>\MT@is@active@hook</code> : fix for <code>doc/shortvrb</code> 's <code>\MakeShortVerb</code>	90
fix protrusion patch footnote for <code>hyperref</code> if <code>\hyper@nopatch@footnote</code> is defined	37	fix for <code>listings</code> 's <code>\lstMakeShortInline</code> (reported by <i>Denis Bitouzé</i>)	90
fix protrusion patch footnote for <code>hyperref</code> with option <code>implicit=false</code>	37	hook for active chars	90
fix protrusion patch footnote with <code>beamer</code>	37	<code>\MT@prot@addgroup</code> : only add group if very first token	55
protrusion patch <code>eqnum</code> : adjust to robustness of <code>\eqref</code> (<i>LATEX 2022-06-01</i>), cf. [issue #19]	36	<code>\MT@prot@check@cmds</code> : add standard font selection commands	59
Font aliases: declare aliases for <code>stickstoo</code> fonts	144	ignore <code>\empty</code>	59
<code>\MT@csq@eqgroup</code> : add <code>\relax</code> (for <code>csquotes</code>)	53	new macro: make list of commands extensible	59
<code>\MT@get@prot</code> : revert <code>\leavevmode</code>	53	<code>\MT@prot@get@first@token</code> : don't gobble previously captured content	55
		<code>\MT@prot@ifmacro@</code> : use <code>etoolbox</code> facilities	54

2022/06/23 **Version 3.0f**

<code>\MT@prot@check@cmds</code> : add new NFSS commands ..	59	ings (also fixes [issue #20], reported by <i>Christophe Dervieux</i>)	54
add <code>microtype</code> 's commands	59		
<code>\MT@prot@iflicrcmd</code> : no need to know about encod-			

2023/03/06 **Version 3.1**

General: fix test for KOMA classes in protrusion patch footnote (also reported by <i>David Purton</i>) [issue #26]	37	<code>\MT@prot@check@cmds</code> : add <code>ltxdoc</code> and doc abbreviations	60
new protrusion patch <code>verbatim</code>	37	add <code>\em</code>	59
Documentation: add hint about protrusion patch warnings	U29	add <code>\MakeUppercase</code> and friends	59
<code>\DeclareMicrotypeFilePrefix</code> : new command (suggested by <i>rallg</i>) [issue #28]	107	add <code>csquotes</code> 's commands (reported by <i>Shen Zhou Hong</i>) [issue #25]	60
<code>\MT@active@features</code> : always activate contexts for tracking	97	add <code>fontaxes</code> commands	59
<code>\MT@define@patch</code> : check if patch defined	33	add <code>nfssext-cfr</code> commands	60
define patches globally	33	<code>\MT@prot@check@E</code> : new macro: take care of commands that enclose their argument	57
<code>\MT@find@file</code> : simplify	81	<code>\MT@prot@check@e</code> : new macro: take care of starred commands that enclose their argument	57
<code>\MT@prot@addgroup</code> : allow multiple groups	55	<code>\MT@prot@check@eX</code> : new macro: replace enclosing commands	58
<code>\MT@prot@check</code> : allow replacement command	56	<code>\MT@prot@check@F</code> : new macro: for text commands	58

\MT@prot@check@l: new macro: for commands that enclose their second argument	58	switching enclosing commands	58
\MT@prot@check@lX: new macro: replace language-		\MT@prot@get@first@token: expand toks once	55
		\MT@prot@l@tc: new macro: for text commands	52

2023/03/13

Version 3.1a

\MT@prot@check@F: fix: execute (and empty) \MT@toks (reported by Artur A. Marczok and Uwe Siart)	58
--	----

2024/03/29

Version 3.1b

General: add DEPENDS.txt (suggested by Bruno Vitali)	U1	with an optional argument (after <i>scholnik</i> reported that \MakeUppercase and friends support one) [issue #29]	59
\MT@check@MT@version: check if .sty and .def (and .lua) file versions match	126	\MT@prot@check@F: fix: failed when group began with another command [issue #31]	58
\MT@fix@fontdimen@si: compatibility with LuaTeX in DVI mode (reported by Linas Stonys)	41	\MT@with@babel@and@T: don't use \@pkgextension (was \@onlypreambled in older L ^A T _E X versions)	28
\MT@if@expanding@F: new macro: check whether inside expanding context	20	\pickup@font: guard against expanding context	96
\MT@prot@check@C: new macro: for text commands			

2024/12/12

Version 3.2

General: fix protrusion patch footnote (reported by <i>hpvd</i>) [issue #40]	36	\MT@prot@addtoken@next: make color-safe	56
letterspacing/tracking with X _E T _E X (requested by Aleksandr Petrosyan) [issue #22]	66	\MT@prot@check@cmds: add color's \color command add some fontspec commands	60
protrusion patch eqnum: fix for IEEETran	36	\MT@prot@check@F: fix: add \@empty (reported by nowox)	58
protrusion patch eqnum: fix for showkeys	35	\MT@prot@check@F@beamer: compatibility with beamer's overlay specifications (reported by Frank Mittelbach) [issue #38]	58
Tracking: features instead of no ligatures with X _E T _E X	151	\MT@prot@check@o: new macro: for one-argument commands with optional argument	57
\DeclareMicrotypeBabelHook: make catcode-safe	108	\MT@set@tr@codes: fix noligatures for OpenType fonts with letterspace	68
\microtypesetup: make robust	128	\MT@tr@noligatures: new values 'none' and 'all' for the 'no ligatures' key in \SetTracking (after a report by user202729)	74
\MT@get@prot: make color-safe	53	\MT@tr@set@okern: fix for LuaTeX and X _E T _E X	78
\MT@get@size: check for dimen (reported by Oliver Beery) [issue #36]	103	\MT@tr@set@space@o: fix for LuaTeX and X _E T _E X	75
\MT@if@opentype@font: version for X _E T _E X	25	\MT@varwidth@setup: patch varwidth to allow for margin kerning (reported by web-stranger)	29
\MT@letterspace@default: new default for letterspacing: 50 (following a report by Mark Collins) [issue #41]	17	\SetTracking: new key 'features' to enable/disable fontspec features (LuaTeX or X _E T _E X)	109
\MT@ls@fontspec@font: fix for spaces in font names, made necessary because fontspec v2.9b no longer strips them (reported by Bernhard Fisseni) [issue #35]	70		

2025/02/11

Version 3.2a

General: fix protrusion patch footnote with changebar (reported by Rimole) [issue #45]	37	spec (reported by Clea F. Rees) [issue #47]	70
fix protrusion patch footnote with fnbreak (reported by Rimole) [issue #44]	37	\MT@noligatures: fix: define current feature (reported by Nick Bart) [issue #42]	79
\MT@ls@fontspec@font: remove kernfactor from font		\MT@varwidth@setup: fix for standalone class (reported by Denis Bitouzé) [issue #43]	29

2025/07/09

Version 3.2b

Font aliases: declare Crimson as an alias of Minion (suggested by Karl Berry)	143	\berry) [issue #50]	158
Inheritance: settings for OT1/tt	146	\showhyphens: compatibility with L ^A T _E X 2025/06/01 (reported by Akira Yokosawa and Joerg Klein) [issues #53,#55]	135
Protrusion: settings for OT1/tt (suggested by Karl			

D Index

Numbers in upright shape refer to the *page* where the corresponding entry is described (bold face) resp. occurs.
 Numbers in italic shape refer to the *code line* where the corresponding entry is defined (underlined) resp. used.
 Numbers prefixed with ‘U’ refer to pages in the User manual.

E The LATEX Project Public License

LPPL Version 1.3c 2008-05-04

Copyright 1999, 2002–2008 LATEX3 Project

Everyone is allowed to distribute verbatim copies of this license document, but modification of it is not allowed.

Preamble

The LATEX Project Public License (LPPL) is the primary license under which the LATEX kernel and the base LATEX packages are distributed.

You may use this license for any work of which you hold the copyright and which you wish to distribute. This license may be particularly suitable if your work is TeX-related (such as a LATEX package), but it is written in such

a way that you can use it even if your work is unrelated to TeX.

The section ‘WHETHER AND HOW TO DISTRIBUTE WORKS UNDER THIS LICENSE’, below, gives instructions, examples, and recommendations for authors who are considering distributing their works under this license.

This license gives conditions under which a work may

be distributed and modified, as well as conditions under which modified versions of that work may be distributed.

We, the L^AT_EX3 Project, believe that the conditions below give you the freedom to make and distribute modified versions of your work that conform with whatever technical specifications you wish while maintaining the

availability, integrity, and reliability of that work. If you do not see how to achieve your goal while meeting these conditions, then read the document ‘cfgguide.tex’ and ‘modguide.tex’ in the base L^AT_EX distribution for suggestions.

Definitions

In this license document the following terms are used:

Work: Any work being distributed under this License.

Derived Work: Any work that under any applicable law is derived from the Work.

Modification: Any procedure that produces a Derived Work under any applicable law – for example, the production of a file containing an original file associated with the Work or a significant portion of such a file, either verbatim or with modifications and/or translated into another language.

Modify: To apply any procedure that produces a Derived Work under any applicable law.

Distribution: Making copies of the Work available from one person to another, in whole or in part. Distribution includes (but is not limited to) making any electronic components of the Work accessible by file transfer protocols such as FTP or HTTP or by shared file systems such as Sun’s Network File System (NFS).

Compiled Work: A version of the Work that has been processed into a form where it is directly usable on a

computer system. This processing may include using installation facilities provided by the Work, transformations of the Work, copying of components of the Work, or other activities. Note that modification of any installation facilities provided by the Work constitutes modification of the Work.

Current Maintainer: A person or persons nominated as such within the Work. If there is no such explicit nomination then it is the ‘Copyright Holder’ under any applicable law.

Base Interpreter: A program or process that is normally needed for running or interpreting a part or the whole of the Work.

A Base Interpreter may depend on external components but these are not considered part of the Base Interpreter provided that each external component clearly identifies itself whenever it is used interactively. Unless explicitly specified when applying the license to the Work, the only applicable Base Interpreter is a ‘L^AT_EX-Format’ or in the case of files belonging to the ‘L^AT_EX-format’ a program implementing the ‘T_EX language’.

Conditions on Distribution and Modification

1. Activities other than distribution and/or modification of the Work are not covered by this license; they are outside its scope. In particular, the act of running the Work is not restricted and no requirements are made concerning any offers of support for the Work.
2. You may distribute a complete, unmodified copy of the Work as you received it. Distribution of only part of the Work is considered modification of the Work, and no right to distribute such a Derived Work may be assumed under the terms of this clause.
3. You may distribute a Compiled Work that has been generated from a complete, unmodified copy of the Work as distributed under Clause 2 above, as long as that Compiled Work is distributed in such a way that the recipients may install the Compiled Work on their system exactly as it would have been installed if they generated a Compiled Work directly from the Work.
4. If you are the Current Maintainer of the Work, you may, without restriction, modify the Work, thus creating a Derived Work. You may also distribute the Derived Work without restriction, including Compiled Works generated from the Derived Work. Derived Works distributed in this manner by the Current Maintainer are considered to be updated versions of the Work.
5. If you are not the Current Maintainer of the Work, you may modify your copy of the Work, thus creating a Derived Work based on the Work, and compile this Derived Work, thus creating a Compiled Work based on the Derived Work.
6. If you are not the Current Maintainer of the Work, you may distribute a Derived Work provided the following conditions are met for every component of the Work unless that component clearly states in the copyright notice that it is exempt from that condition. Only the Current Maintainer is allowed to add such statements of exemption to a component of the Work.
 - (a) If a component of this Derived Work can be a direct replacement for a component of the Work when that component is used with the Base Interpreter, then, wherever this component of the Work identifies itself to the user when used interactively with that Base Interpreter, the replacement component of this Derived Work clearly and unambiguously identifies itself as a modified version of this component to the user when used interactively with that Base Interpreter.
 - (b) Every component of the Derived Work contains prominent notices detailing the nature of the changes to that component, or a prominent reference to another file that is distributed as part of the Derived Work and that contains a complete and accurate log of the changes.
 - (c) No information in the Derived Work implies that

- any persons, including (but not limited to) the authors of the original version of the Work, provide any support, including (but not limited to) the reporting and handling of errors, to recipients of the Derived Work unless those persons have stated explicitly that they do provide such support for the Derived Work.
- (d) You distribute at least one of the following with the Derived Work:
- i. A complete, unmodified copy of the Work; if your distribution of a modified component is made by offering access to copy the modified component from a designated place, then offering equivalent access to copy the Work from the same or some similar place meets this condition, even though third parties are not compelled to copy the Work along with the modified component;
 - ii. Information that is sufficient to obtain a complete, unmodified copy of the Work.
7. If you are not the Current Maintainer of the Work, you may distribute a Compiled Work generated from a Derived Work, as long as the Derived Work is distributed to all recipients of the Compiled Work, and as long as the conditions of Clause 6, above, are met with regard to the Derived Work.
8. The conditions above are not intended to prohibit, and hence do not apply to, the modification, by any method, of any component so that it becomes identical to an updated version of that component of the Work as it is distributed by the Current Maintainer under Clause 4, above.
9. Distribution of the Work or any Derived Work in an alternative format, where the Work or that Derived Work (in whole or in part) is then produced by applying some process to that format, does not relax or nullify any sections of this license as they pertain to the results of applying that process.
10. (a) A Derived Work may be distributed under a different license provided that license itself honors the conditions listed in Clause 6 above, in regard to the Work, though it does not have to honor the rest of the conditions in this license.
- (b) If a Derived Work is distributed under a different license, that Derived Work must provide sufficient documentation as part of itself to allow each recipient of that Derived Work to honor the restrictions in Clause 6 above, concerning changes from the Work.
11. This license places no restrictions on works that are unrelated to the Work, nor does this license place any restrictions on aggregating such works with the Work by any means.
12. Nothing in this license is intended to, or may be used to, prevent complete compliance by all parties with all applicable laws.

No Warranty

There is no warranty for the Work. Except when otherwise stated in writing, the Copyright Holder provides the Work ‘as is’, without warranty of any kind, either expressed or implied, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The entire risk as to the quality and performance of the Work is with you. Should the Work prove defective, you assume the cost of all necessary servicing, repair, or correction.

In no event unless required by applicable law or agreed to in writing will The Copyright Holder, or any au-

thor named in the components of the Work, or any other party who may distribute and/or modify the Work as permitted above, be liable to you for damages, including any general, special, incidental or consequential damages arising out of any use of the Work or out of inability to use the Work (including, but not limited to, loss of data, data being rendered inaccurate, or losses sustained by anyone as a result of any failure of the Work to operate with any other programs), even if the Copyright Holder or said author or said other party has been advised of the possibility of such damages.

Maintenance of The Work

The Work has the status ‘author-maintained’ if the Copyright Holder explicitly and prominently states near the primary copyright notice in the Work that the Work can only be maintained by the Copyright Holder or simply that it is ‘author-maintained’.

The Work has the status ‘maintained’ if there is a Current Maintainer who has indicated in the Work that they are willing to receive error reports for the Work (for example, by supplying a valid e-mail address). It is not required for the Current Maintainer to acknowledge or act upon these error reports.

The Work changes from status ‘maintained’ to ‘unmaintained’ if there is no Current Maintainer, or the person stated to be Current Maintainer of the work cannot be reached through the indicated means of communication for a period of six months, and there are no other

significant signs of active maintenance.

You can become the Current Maintainer of the Work by agreement with any existing Current Maintainer to take over this role.

If the Work is unmaintained, you can become the Current Maintainer of the Work through the following steps:

1. Make a reasonable attempt to trace the Current Maintainer (and the Copyright Holder, if the two differ) through the means of an Internet or similar search.
2. If this search is successful, then enquire whether the Work is still maintained.
 - (a) If it is being maintained, then ask the Current Maintainer to update their communication data within one month.

- (b) If the search is unsuccessful or no action to resume active maintenance is taken by the Current Maintainer, then announce within the pertinent community your intention to take over maintenance. (If the Work is a LATEX work, this could be done, for example, by posting to `comp.text.tex`.)
- 3. (a) If the Current Maintainer is reachable and agrees to pass maintenance of the Work to you, then this takes effect immediately upon announcement.
- (b) If the Current Maintainer is not reachable and the Copyright Holder agrees that maintenance of the Work be passed to you, then this takes effect immediately upon announcement.
- 4. If you make an ‘intention announcement’ as described in 2b above and after three months your intention is challenged neither by the Current Maintainer nor

by the Copyright Holder nor by other people, then you may arrange for the Work to be changed so as to name you as the (new) Current Maintainer.

5. If the previously unreachable Current Maintainer becomes reachable once more within three months of a change completed under the terms of 3b or 4, then that Current Maintainer must become or remain the Current Maintainer upon request provided they then update their communication data within one month.

A change in the Current Maintainer does not, of itself, alter the fact that the Work is distributed under the LPPL license.

If you become the Current Maintainer of the Work, you should immediately provide, within the Work, a prominent and unambiguous statement of your status as Current Maintainer. You should also announce your new status to the same pertinent community as in 2b above.

Whether and How to Distribute Works under This License

This section contains important instructions, examples, and recommendations for authors who are considering distributing their works under this license. These authors are addressed as ‘you’ in this section.

Choosing This License or Another License

If for any part of your work you want or need to use *distribution* conditions that differ significantly from those in this license, then do not refer to this license anywhere in your work but, instead, distribute your work under a different license. You may use the text of this license as a model for your own license, but your license should not refer to the LPPL or otherwise give the impression that your work is distributed under the LPPL.

The document ‘modguide.tex’ in the base LATEX distribution explains the motivation behind the conditions of this license. It explains, for example, why distributing LATEX under the GNU General Public License (GPL) was considered inappropriate. Even if your work is unrelated to LATEX, the discussion in ‘modguide.tex’ may still be relevant, and authors intending to distribute their works under any license are encouraged to read it.

A Recommendation on Modification Without Distribution

It is wise never to modify a component of the Work, even for your own personal use, without also meeting the above conditions for distributing the modified component. While you might intend that such modifications will never be distributed, often this will happen by accident – you may forget that you have modified that component; or it may not occur to you when allowing others to access the modified version that you are thus distributing it and violating the conditions of this license in ways that could have legal implications and, worse, cause problems for the community. It is therefore usually in your best interest to keep your copy of the Work identical with the public one. Many works provide ways to control the behavior of that work without altering any of its licensed components.

How to Use This License

To use this license, place in each of the components of your work both an explicit copyright notice including your name and the year the work was authored and/or last substantially modified. Include also a statement that the distribution and/or modification of that component is constrained by the conditions in this license.

Here is an example of such a notice and statement:

```
%> pig.dtx
%> Copyright 2005 M. Y. Name
%
%> This work may be distributed and/or modified under the
%> conditions of the LaTeX Project Public License, either version 1.3
%> of this license or (at your option) any later version.
%> The latest version of this license is in
%> https://www.latex-project.org/lppl.txt
%> and version 1.3 or later is part of all distributions of LaTeX
%> version 2005/12/01 or later.
%
%> This work has the LPPL maintenance status `maintained'.
%
%> The Current Maintainer of this work is M. Y. Name.
%
%> This work consists of the files pig.dtx and pig.ins
%> and the derived file pig.sty.
```

Given such a notice and statement in a file, the conditions given in this license document would apply, with the ‘Work’ referring to the three files ‘pig.dtx’, ‘pig.ins’, and ‘pig.sty’ (the last being generated from ‘pig.dtx’ using ‘pig.ins’), the ‘Base Interpreter’ referring to any ‘LATEX-Format’, and both ‘Copyright Holder’ and ‘Current Maintainer’ referring to the person ‘M. Y. Name’.

If you do not want the Maintenance section of LPPL to apply to your Work, change ‘maintained’ above into ‘author-maintained’. However, we recommend that you use ‘maintained’ as the Maintenance section was added in order to ensure that your Work remains useful to the community even when you can no longer maintain and support it yourself.

Derived Works That Are Not Replacements

Several clauses of the LPPL specify means to provide reliability and stability for the user community. They therefore concern themselves with the case that a Derived Work is intended to be used as a (compatible or incompatible) replacement of the original Work. If this is not the case

(e.g., if a few lines of code are reused for a completely different task), then clauses 6b and 6d shall not apply.

Important Recommendations

Defining What Constitutes the Work

The LPPL requires that distributions of the Work contain all the files of the Work. It is therefore important that you provide a way for the licensee to determine which

files constitute the Work. This could, for example, be achieved by explicitly listing all the files of the Work near the copyright notice of each file or by using a line such as:

% This work consists of all files listed in manifest.txt.

in that place. In the absence of an unequivocal list it might be impossible for the licensee to determine what is considered by you to comprise the Work and, in such a case, the licensee would be entitled to make reasonable conjectures as to which files comprise the Work.
