Abstract

The font family Libertinus is derived from the Linux Libertine and enhanced with a math font.

1   Meaning

The package `libertinus` is only a wrapper for the other two packages `libertinus-type1` and `libertinus-otf`. Depending to the used TEX-engine one of these packages is loaded. All optional arguments are passed to `libertinus-type1` if `pdflatex` is used or passed to `libertinus-otf` if `xelatex` or `lualatex` are used.
