

Example for footnoterange

This example demonstrates the use of package `footnoterange`, v1.0b as of 2018/10/15 (HMM).

The package does not use options.

`footnoterange-example.pdf` can be created by

`pdflatex footnoterange-example.tex`,

and `footnoterange-example.tex` can be created by

`tex footnoterange.dtx`.

`footnoterange.dtx` is at <https://www.ctan.org/pkg/footnoterange>.

This¹ text bears a multiplicity of footnotes. Because the `hyperref` package is used with option `hyperfootnotes=true`, the footnotes²⁻⁹ are hyperlinked.¹⁰ Using `hyperfootnotes=false` or not using `hyperref` will remove the hyperlinks to the footnotes.

This text also bears a multiplicity of footnotes, but due to the use of the starred¹¹⁻¹⁸ form of the environment they are not hyperlinked.¹⁹

The use of the optional parameter for footnotes¹⁰¹⁻¹⁰⁵ is also possible, but should be used consistently.

When there is only one footnote²⁵ in the `footnoterange` environment, only one footnotemark is used and an info is written into the `log`-file.

The usage of other footnote-number-representations (e. g. `\Roman`, `\roman`, `\Alph`, `\alph`, `\fnsymbol`) is also possible, but two things must be taken into account: The number of footnote references is restricted (for example with `\Alph` only references A to Z are possible), which can be fixed e. g. with the `alphalph` package, and references to footnote-symbol-ranges (`\fnsymbol`) are probably not very clear.
