

**NAME**

`psbook` – rearrange pages in PostScript file into signatures

**SYNOPSIS**

`psbook` [`-q`] [`-signature`] [`infile` [`outfile`]]

**DESCRIPTION**

**Psbook** rearranges pages from a PostScript document into “signatures” for printing books or booklets, creating a new PostScript file. The input PostScript file should follow the Adobe Document Structuring Conventions.

The `-s` option selects the size of signature which will be used. The signature size is the number of sides which will be folded and bound together; the number given should be a multiple of four. The default is to use one signature for the whole file. Extra blank sides will be added if the file does not contain a multiple of four pages.

**Psbook** normally prints the page numbers of the pages rearranged; the `-q` option suppresses this.
