1 What is this?

This is an attempt to access maths characters in \LaTeX conveniently. As it stands, process this file or `maths-font-mappings.ins` with `xelatex` or equivalent to obtain a whole bunch of \LaTeX font mappings that convert `ASCII` input to various ranges in the mathematical part of Unicode Plane 1. They need to be processed with `teckit_compile` before they can be used, for which a shell script is provided.

2 Covered ranges and future work

For now, only Latin characters [a-zA-Z] and arabic numbers [0–9] are covered. There are no italic numbers; italic mappings correspond to their upright numbers in an equivalent style, if possible. I'll probably add Greek letters [alpha–omega, etc.] at a later date. Mappings are provided for

- italic
- bold
- italic-bold
- script
- script-bold
- blackboard
- fraktur
- fraktur-bold
- sans
- sans-bold
- sans-italic
- sans-italic-bold

- typewriter

Luckily, Xe₂TeX allows more than 16 maths families, or we'd be mighty squeezed for space.

4 The font mappings

4.1 Mapping compilation shell script

Run the following shell script `sh maths-map.sh` to compile the following font mappings definitions to their binary (useable) form.

```
26 teckit_compile ascii-maths-italic
27 teckit_compile ascii-maths-bold
28 teckit_compile ascii-maths-italic-bold
29 teckit_compile ascii-maths-script
30 teckit_compile ascii-maths-script-bold
31 teckit_compile ascii-maths-blackboard
32 teckit_compile ascii-maths-fraktur
33 teckit_compile ascii-maths-fraktur-bold
34 teckit_compile ascii-maths-sans
35 teckit_compile ascii-maths-sans-bold
36 teckit_compile ascii-maths-sans-italic
37 teckit_compile ascii-maths-sans-bold-italic
38 teckit_compile ascii-maths-typewriter
```

4.2 The font mappings

Note that various characters had to be omitted, due to those characters being reserved, for whatever reason, in Unicode.
