Abstract

This bibliography lists journals that accept papers written using TEX, and use TEX to produce the output page images without rekeying the text.

tj-acp

[ACP02] *Atmospheric Chemistry and Physics*, 2002. ISSN 1680-7316. URL `http://www.atmos-chem-phys.org/technical-tex.htm`. European Geophysical Society. Typeset with pdfLaTeX. Authors are strongly encouraged to submit manuscripts in LaTeX using the egs.cls style file. As a reward, page charges will be lower than for submission in other formats. In the first step, a pdf file will be produced suitable for on-line viewing. After an

Internet-based discussion of the scientific contents the paper will (if accepted) be formatted in the traditional two-column layout using the same LaTeX source.

tj-appl-math-comp

[APP] *Applied Mathematics and Computation.* CODEN AMHCBQ. ISSN 0096-3003 (print), 1873-5649 (electronic). North-Holland Publishing Company, Amsterdam, The Netherlands. From volume 59, number 1, November 1993, the journal cover proclaims in a fancy logo "Now accepting LaTeX manuscripts". Contact Victor van Beuren, Editor, Physical Sciences Journals Group, Elsevier Science Inc., 655 Avenue of the Americas, New York, NY 10010, e-mail: `vvb@panix.com`, for further details.

tj-bull-ams

[BAM] *Bulletin of the American Mathematical Society.* CODEN BAMOAD. ISSN 0273-0979 (print), 1088-9485 (electronic). American Mathematical Society, Providence, RI, USA. Use of AMS-TeX began in 1983; completely in AMS-TeX and AMS-LaTeX since late 1986; style files available at `e-math.ams.org`.

tj-cgf

[CGF] *Computer Graphics Forum.* CODEN CGFODY. ISSN 0167-7055 (print), 1467-8659 (electronic). North-Holland Publishing Company, Amsterdam, The Netherlands. Publication switched from troff to TeX in summer 1992.

tj-can-j-math

[CJM] *Canadian Journal of Mathematics.* CODEN CJMAAB. ISSN 0008-414X (print), 1496-4279 (electronic). Completely done in TeX since about 1988, including covers and index. The Bulletin consists of four issues of 144 pages each per year, while the Journal consists of six issues of 224 pages each. The final output is produced from PostScript files, so the particular variation of TeX (LaTeX, AMS-TeX, plain) isn't important, as long as the source document can be adapted to conform to the style of each journal. A CMSTeX style file for plain TeX is used internally, and a LaTeX style file is nearly complete.

tj-can-math-bull

[CMB] *Canadian Mathematical Bulletin.* CODEN CMBUA3. ISSN 0008-4395 (print), 1496-4287 (electronic). The Canadian Mathematical Society employs TeX for their typesetting, and encourages authors to submit that way. See also the note under [CJM].

tj-intcom

[INT91] Vyacheslav M. Nesterov, editor. *Interval Computations*, 1991. ISSN 0135-4868. Box 52, St.Petersburg 195256, Russia, E-mail: `nest@nit.spb.su` (Internet). A refereed international journal, *Interval Computations* is the only periodical in the world devoted specifically to various aspects of reliable numerical computations based on the interval approach. It is managed by an international editorial board from Bulgaria, Germany, Japan, Russia, and the United States, and printed in

Russia. The journal includes various items in the fields of theoretical research, computer tools, applications, interdisciplinary research and other relevant areas. The IC has been prepared with TEX since 1992. Recently a new style has been designed based on standard LATEX `article` style with changes in fonts, headings layout, running heads etc. It uses 10.8pt Baskerville for body text (the unusual font size is selected for better wedding with CM math) and horizontally-squeezed Palatino for headings. For mathematical formulae, standard Computer Modern is preserved. Proofs are made using emTEX DVIHPLJ on a Hewlett–Packard LaserJet IIIp, and final pages are printed at 600dpi. Using VTEX is now under consideration. Papers are accepted in any TEX variety; LATEX `article.sty` preferred.

tj-nyjm

[NYJ94] Mark Steinberger, editor. *The New York Journal of Mathematics*, 1994. ISSN 1076-9803. University at Albany, State University of New York, Albany, NY, USA. Electronic submission and publication only. The New York Journal of Mathematics is a refereed mathematics journal being launched by the University at Albany, State University of New York.

The journal is broadly based in subject matter, covering algebra, modern analysis, and geometry/topology.

The papers will be presented via the TeX mathematical typesetting language, developed by Donald Knuth. TeX has become the standard for computer typesetting of mathematical publications.

Access will be provided through a variety of electronic means, including `listserv`, anonymous `ftp` and `gopher`. In particular, access will be much more convenient than that provided by a conventional print journal. Because papers will be published as they are accepted by the editorial board, publication delays will be minimal.

The articles will be archived, date stamped, and maintained by the University at Albany, State University of New York. The University takes responsibility for insuring the integrity of the journal's archive in perpetuity.

The journal will have an ISSN number and will be accessed by the major bibliographic publications in the field.

The development of this journal is being underwritten by the Office of Information Systems of the University at Albany, State University of New York.

The New York Journal will be accessible by a combination of `listserv` and `gopher/ftp`.

By `listserv`, we will distribute abstracts of the papers, together with instructions for retrieving them via `ftp` and `gopher`.

The abstracts will be available on four separate `listserv` lists: one will distribute abstracts for every paper. The other three are specialty lists, giving abstracts for papers in algebra, analysis and geometry/topology, respectively. The reader may, of course, subscribe to any combination of these lists.
